A lack of activity increases the risk of heart disease, colon and breast cancer, diabetes mellitus, hypertension, osteoporosis, anxiety and depression and others diseases. Emerging literature has suggested that in terms of mortality,

the global population health burden of physical inactivity approaches that of cigarette smoking. The prevalence and substantial disease risk associated with physical inactivity has been described as a pandemic. The prevalence, health impact, and evidence of changeability all have resulted in calls for action to increase physical activity across the lifespan. In response to

the need to find ways to make physical activity a health priority for youth, the Institute of Medicine's Committee on Physical Activity and Physical Education in the School Environment was formed. Its purpose was to review the current status of physical activity and physical education in the school environment, including before, during, and after school, and examine the influences of

physical activity and physical education on the short and long term physical, cognitive and brain, and psychosocial health and development of children and adolescents. Educating the Student Body makes recommendations about approaches for strengthening and improving programs and policies for physical activity and physical education in the school environment.

This report lays out a set of guiding principles to guide its work on these tasks. These included: recognizing the benefits of instilling life-long physical activity habits in children; the value of using systems thinking in improving physical activity and physical education in the school environment; the recognition of current disparities in opportunities and the need to achieve equity in

physical activity and physical education; the importance of considering all types of school environments; the need to take into consideration the diversity of students as recommendations are developed. This report will be of interest to local and national policymakers, school officials, teachers, and the education community, researchers, professional organizations, and parents interested in

physical activity, physical education, and health for school-aged children and adolescents. This handbook provides a comprehensive compendium of research in all aspects of mobile learning, one of the most significant ongoing global developments in the entire field of education. Rather than focus on specific technologies, expert authors discuss how best to utilize technology in the service of improving teaching and learning. For more than a decade,

researchers and practitioners have been exploring this area of study as the growing popularity of smartphones, tablets, and other such devices, as well as the increasingly sophisticated applications for these devices, has allowed educators to accommodate and support an increasingly mobile society. This handbook provides the first authoritative account of the theory and

research that underlies mobile learning, while also exemplifying models of current and future practice. *Educating the Student Body* Corwin

Our nation's schools stand at an important "inflection point" in the history of education.

Taken together, the implementation of common college and career standards, the shift to next generation assessments, the availability of affordable devices, and the growing number of high-quality digital

instructional tools create an unprecedented opportunity to fundamentally shift the education system to personalize learning around the individual needs of every student. Digital Learning Now! (DLN), a national initiative under the Foundation for Excellence in Education (ExcellinEd), in association with Getting Smart, brings “Navigating the Digital Shift: Implementation Strategies for Blended and Online Learning” to readers interested in exploring the implementation challenges at the intersection of these shifts. Co-authored by John Bailey, Carri Schneider, and Tom Vander Ark, “Navigating the Digital Shift” offers updated versions of the eight papers originally released in the “DLN Smart Series” including contributions from 11 additional co-authors representing leading organizations such as Public Impact, the International Association for K-12 Online Learning (iNACOL) and The Learning Accelerator. Topics include: blended learning implementation, teaching conditions and careers, competency-based learning, student data, online learning myths, and student-based funding. Jeb Bush,

<p>Governor of Florida from 1999-2007 and Chairman of ExcelsiorEd, contends that the book “provides policymakers and education leaders the tools they need to use digital learning as a catalyst for improved student achievement.” AASA 2013 Superintendent of the Year Dr. Mark Edwards believes the collection “provides meaningful, practical, and poignant advice as well as</p>	<p>commentary regarding the move to college and career ready standards associated with the shift to personal learning and digital resources.” Rhode Island’s Commissioner of Elementary and Secondary Education Deborah Gist describes the book as an “invaluable resource that will help educators re-imagine what our schools can look like and what our students can accomplish.”</p>	<p><u>Premiere Online Ed (1 Year Subscription)</u> Carson-Dellosa Publishing Prospective college students and their parents have been relying on Loren Pope’s expertise since 1995, when he published the first edition of this indispensable guide.
