The name of Ruckers is as important to early keyboard instruments as Stradivarius is to strings. This book describes in close detail the art and technique of the Ruckers family, who produced harpsichords and virginals throughout a period of over 100 years. Dr O'Brien provides detailed

information about the construction and decoration of Ruckers harpsichords and virginals, as well as the numbering, pitch, stringing, and the determination of the original state of their instruments. Like Stradivarius violins, Ruckers instruments were later altered, and the nature and musical significance of these alterations are discussed, as is the influence of the Ruckers style on later building practice. The instruments in their original and altered states are considered in relation to the music of the time and to contemporary performance practice. The text is richly illustrated with diagrams and pictures of original instruments, and with plan-view photographs reproduced at a scale of 1:10. The book also contains a partially illustrated catalogue of authentic and fake instruments, followed by extensive appendices.

This book follows the journeys of those fleeing war, poverty or political crises, risking their lives as they attempt to find sanctuary in Europe. Over the past 25 years, almost 40,000 migrants have been reported missing or died due to drowning or exhaustion on the borders of Europe. 6,000 migrants died in 2016 alone, making it the deadliest year on record. Growing numbers of arrivals since 2015 have caused a wave of panic to sweep across the countries of the European Union, which has responded with an increasingly entrenched policy - the only one it considers appropriate - of fortifying its external borders. As a result, numerous walls and fences have sprung up to "regulate the flows", new camps have been opened and reception centres have been set up beyond the frontiers of Europe, all accompanied by the steady militarisation of surveillance and repression. The EU has thus been just as active in precipitating this "migrant crisis" as it has been in prolonging its effects. Indeed, this crisis calls into question the entire European system for border management and policies on immigration and reception. Deconstructing preconceptions, changing the way we see others, probing borders and mapping the nexus of control and detention, the collection of articles, maps, photographs and illustrations in this Atlas provide an important critical geography of migration policies. Perfect for journalists, activists, students of geopolitics at school or university, this Atlas seeks, above all, to give migrants a voice. d, this crisis calls into question the entire European system for border management and policies on immigration and reception. The international conference on Advances in Computing and Information technology (ACITY 2012) provides an excellent international forum for both academics and professionals for sharing knowledge and results in theory, methodology and applications of Computer Science and Information Technology. The Second International Conference on Advances in Computing and Information technology (ACITY 2012), held in Chennai, India, during July 13-15, 2012, covered a number of topics in all major fields of Computer Science and Information Technology including: networking and communications, network security and applications, web and internet computing, ubiquitous computing, algorithms, bioinformatics, digital image processing and pattern recognition, artificial intelligence, soft computing and applications. Upon a strength review process, a number of high-quality, presenting not only innovative ideas but also a founded evaluation and a strong argumentation of the same, were selected and collected in the present proceedings, that is composed of three different volumes.

Organ transplantation has revolutionized the treatment for end-stage organ failure.

Immunosuppression is still a major approach currently used in the prevention and treatment of allograft rejection. Both editors Dr. Chen and Dr. Qian have been contributing to preclinical evaluation of immunosuppressants for more than 25 years in North America. Experts from the United States, Canada, the United Kingdom, China, Japan, Germany, Sweden, Hungary and Brazil contributed 23 chapters to this book, providing details of immunological basis in transplantation. They also describe six classes of immunosuppressive agents (calcineurin inhibitors, mTOR inhibitors, JAK-STAT inhibitors, antiproliferative agents, costimulation blockers and corticosteroids), as well as ischemia/reperfusion injury treated agents. Additionally, the new development of cell therapy in the induction of transplant tolerance is introduced. This book provides many important references for the research direction of novel immunosuppressants. Readers that will find this book useful include transplant physicians, surgeons, nurses, immunologists, pharmacologists, pharmacists, medical students, residents and trainees in transplantation.

This book examines how western liberal states are progressively restricting access to refugees and asylum seekers, even though these states have signed international agreements obliging them to offer protection to those fleeing persecution and to advocate the spread of human rights and humanitarian principles. Watson examines how refugees and asylum seekers have come to be treated so poorly by these states through the use of policies such as visa requirements, mandatory detention and prevention/return policies. Providing extensive documentary analysis of debates on 'restrictive' refugee policies in Canada and Australia, the author addresses the relationship between security and migration, an issue of increased importance in the aftermath of 9/11 and the war on terror. He then examines hotly-contested policies such as detention and the forceful return of

asylum seekers to demonstrate how attempts to securitise these issues have been resisted in the media and by political opposition. Given the importance of providing refuge for persecuted populations, not only to ensure the survival of targeted individuals, but also to maintain international peace and security, the erosion of protective measures is of great importance today. The book will be of interest to students and scholars of international security, international relations, migration and human rights

The Securitization of Humanitarian Migration Routledge

Originally published in 1862 and intended as a much-needed update to William Preston's *Illustrations of Masonry*, *The Freemason's Manual* sought to provide English Freemasons a deep explanation and education concerning many other Masonic degree systems recognized at the time. In addition, the book surveys the history of dozens of Masonic rites (both recognized and unrecognized) including the Ancient and Accepted Rite (Scottish Rite) and the York Rite (including the Mark Master, the Holy Royal arch, and the Knight Templar degrees), the Rite of Perfection, the Strict Observance, the Elu Cohens, the Rite of Philalethes, Swedenborg's Rite, the Rite of Mizraim, the Rite of Memphis, the Mopses, and Adoptive Masonry. Several details of these degrees are provided at a time before many subsequent changes made to the ritual work. This book offers a rare and intriguing glimpse into the Scottish Rite degrees before the influence of Albert Pike and from the perspective of English Freemasonry.

Working from the Heart John Wiley & Sons

This book investigates cases in which national and international activities have gone massively wrong, entailing seriously negative consequences, and in which the sophisticated analytical models of social science have ceased to be helpful. Illustrations range from the global financial crisis to the failure to achieve speedy systemic change in the former Soviet Union and the failure to achieve development in the Third World. The analysis uses as a backdrop long-term Russian history and short-term Russian encounters with unrestrained capitalism to develop a framework that is based in the so-called new institutionalism. Understanding the causes of systemic failure is shown to require an approach that spans across the increasingly specialized subdisciplines of modern social science. Demonstrating that increasing theoretical sophistication has been bought at the price of a loss of perspective and the need for sensitivity to the role of cultural and historical specificity, the book pleads the case for a new departure in seeking to model the motives for human action.

Application for Employment I refer to the recent death of the Technical Manager at your company and hereby apply for the replacement of the deceased manager. Each time I apply for a job, I get a reply that there is no vacancy but in this case I have caught you red-handed and you have no excuse because I even attended the funeral to be sure that he was truly dead and buried before applying. Attached to my letter is a copy of my CV and his death certificate. *Crap CVs* is a hilarious compilation of the worst job applications imaginable, including overly-honest cover letters, embarrassing typos, mortifying personal revelations, awkward interview questions, misplaced self-confidence, self-aggrandizing gibberish, blatant truth-twisting and, of course, outright lies.

Working from the Heart advocates for a deeper understanding that the therapist's expressions of

non-sexual, non-romantic love are a core ingredient in effective psychotherapy. From a heart-centered perspective it provides therapists with ways of helping their patients forgive themselves, remove their blocks to receiving love, and engaging the realms of their emotional hearts and Higher Self in order to solve complex life dilemmas.

It is the world's first critical book about the laws of literature. Though it is twenty-four centuries old, but its narration, unity of plot, reversal of the situation and character still apply to our modern literary forms although these were written in the context of ancient Greek tragedy, comedy and epic poetry. The narration is short but leaves no queries unexplained.

If learners in the classroom are to be excited by mathematics, teachers need to be both well informed about current initiatives and able to see how what is expected of them can be translated into rich and stimulating classroom strategies. The book examines current initiatives that affect teaching mathematics and identifies pointers for action in the classroom. Divided into three major sections, it looks at: the changing mathematics classroom at primary, secondary and tertiary level major components of the secondary curriculum practical pedagogical issues of particular concern to mathematics teachers. Each issue is explored in terms of major underpinnings and research in that area, and practical ideas can be drawn from the text and implemented in the reader's classroom practice. Each chapter has been written by a well-respected writer, researcher and practitioner in their field and all share a common goal: to look thoughtfully and intelligently at some of the practical issues facing mathematics teachers and offer their perspectives on those issues.

This publication gives a wide-ranging perspective on the present state of mechanization in the developing world, and, as such, constitutes a solid platform on which to build strategies for a sustainable future. Farm mechanization forms an integral plank in the implementation of sustainable crop production intensification methodologies and sustainable intensification necessarily means that the protection of natural resources and the production of ecosystem services go hand-in-hand with intensified production practices. This requires specific mechanization measures to allow crops to be established with minimum soil disturbance, to allow the soil to be protected under organic cover for as long as possible, and to establish crop rotations and associations to feed the soil and to exploit

crop nutrients from various soil horizons. This work is the starting point to help the reader understand the complexities and requirements of the task ahead.

This book constitutes the thoroughly refereed proceedings of the Second GeoSensor Networks Conference, held in Boston, Massachusetts, USA, in October 2006. The conference addressed issues related to the collection, management, processing, analysis, and delivery of real-time geospatial data using distributed geosensor networks. This represents an evolution of the traditional static and centralized geocomputational paradigm. The 13 carefully reviewed and selected papers included in the volume constitute extended versions of the papers presented at the conference. They are preceded by an introduction written by the volume editors. The book is structured in sections on Data Acquisition and Processing, Data Analysis and Integration, and Applications. The papers represent key research areas that are fundamental in order to realize the full potential of the emerging geosensor network paradigm. The contributions cover the entire spectrum of the field from low-level energy consumption issues at the individual sensor level to the high-level abstraction of events and ontologies or models to recognize and monitor phenomena using geosensor networks.
