[English]: "Health, Safety and Environment Symposium" is an event of

national importance dedicated to the theme of safety and prevention. The Department of Public Health of the University of Naples "Federico II" and the Associazione Europea per la Prevenzione (European Prevention Association) organized this event on October 12th and 13th 2018, in Naples. Exponents of the academic, institutional and entrepreneurial world have compared their own experiences and had the opportunity to debate topics concerning health, environment and safety. Objective is to pursue unique targets in prevention theme and to find common aspects and convergence points beyond different approaches of each 'actor': whatever is his intellectual work, according to their skills, prerogatives and objectives. Intent is to lay the

foundations for a permanent and shared comparison, on an annual basis; to set up a meeting between the multi-faceted areas in which are organized the activities in the areas of prevention and safety; to institutionalize a training and social initiative, comprehensive and nonfragmentary, as many previous attempts to create similar occasions have been. Debate is not an end in itself, but a comparison that, over the years, can start an effective growth of the health and safety sectors, in particular in prevention: a meeting that can contribute to innovation. During the event, exponents of the University and institutional fields, representatives of public bodies and business managers and industry professionals, have presented twenty-six unique and original

projects. These publications will act as both a portal and an archive for the first one and for the next editions of the national HSE Symposium. In this way it will be possible to create a useful tool for non-professionals, who can find an updated and scientifically valid point of reference for health and safety issues. Graduates and undergraduates, in addition to presenting their project, can get opportunities to improve their skills by comparing with industry professionals and safety supervisors: a very useful way to get started in the world of work with more knowledge and awareness. The design of a "wide-ranging" safety conference, with the participation of all the professionals involved in the sector, was born from the exchange of experiences between professor Umberto

Carbone (Department of Public Health of the University of Naples " Federico II "), and the engineer Vincenzo Fuccillo (president of the Associazione Europea per la Prevenzione - European Prevention Association), who also oversaw the realization of this book. [Italiano]: "Health, Safety and Environment Symposium" è stato, oltre che un importante evento di rilevanza nazionale per i temi trattati, un momento unico di confronto tra gli addetti ai lavori nei settori Salute, Sicurezza sul Lavoro e Ambiente. Il nobile scopo del Simposio ideato e organizzato dal Dipartimento di Sanità Pubblica dell'Università degli Studi di Napoli "Federico II" e dall'Associazione Europea per la Prevenzione è quello di diventare un vero e proprio punto di

riferimento sul tema, un appuntamento fisso, con cadenza autunnale, per dare a ciascuno dei protagonisti uno spazio di partecipazione al dibattito e un aggiornamento sullo stato dell'arte. Il Simposio rappresenta un'occasione irrinunciabile per l'individuazione di strategie e soluzioni comuni e condivise alle principali problematiche, fornendo un contributo irrinunciabile in termini di innovazione.

Ripercorrere la storia della logopedia in Italia consente di inquadrare la scienza e gli interventi sanitari nel campo della comunicazione e della deglutizione. Le radici, le premesse e i primi tentativi di

cura si ritrovano già nelle antiche civiltà, ma la nascita della comunicologia moderna risale a tempi molto più recenti. Verso la fine dell'Ottocento, in zona mitteleuropea, fanno la loro comparsa informale i primi adepti medici, i foniatristi, e non medici, i logopedisti, ma bisognerà aspettare la fine del secolo per trovare in questo campo posizioni accademiche e professionali definite. Il volume, oltre ad esporre la cronologia di fatti e avvenimenti, vuole percorrere sistematicamente la straordinaria evoluzione scientifico-epistemologica della logopedia, che a sua volta ha provocato importanti ricadute nei metodi di intervento sulla patologia. Una parte consistente riguarda poi gli attuali aspetti legati alle norme, la formazione e

l'esercizio della professione.

Universal Design is a process for creating an equitable and sustainable society. It is a concept committed to recognizing and accepting each individual's potential and characteristics, and promoting the realization of a built environment that does not stigmatize users, but enables everyone to participate fully in their community. This book presents 32 articles from the 5th International Conference on Universal Design (UD2021). Previous Universal Design conferences have been organized biennially, but the 2020 conference was

postponed due to COVID-19 restrictions, and eventually held online from 9 - 11 June 2021. UD2021 brings together a multidisciplinary group of experts from around the world to share knowledge and best practice with the common goal of shaping the way we design; avoiding stereotyped or discriminatory views and solutions that could stigmatize particular groups of people. The articles are organized into chapters under seven broad themes: universal design and inclusive design; user experience and co-design; access to education and learning environment; web accessibility and usability of technology; architecture and the built environment; mobility and transport; and designing for older people. The current situation has highlighted not only the importance of

web accessibility, the user-friendliness of interfaces and remote connections; during the last year, the importance and quality of our daily living environment, access to services and green space has also become ever more obvious. This book will be of particular interest to those working to enable all those with disabilities or impairments to live independently and participate fully in all aspects of life.

Praise for the Fifth Edition: "This book provides a complete look at neonatal healthcare delivery...[It] includes discussions of contemporary topics of interest, such as informatics, genetics, global health, and family-centered care, which are vital to providers caring for

neonates today. The case studies and evidence-based practice dialogues provide great opportunities for further reflection. The book is useful to a wide audience in nursing, including undergraduate and graduate nursing students, practicing neonatal and pediatric nurses, and advanced practice nurses who care for neonates." Score: 92, 4 Stars--Doody's Medical Reviews

The sixth edition of this acclaimed neonatal nursing text is completely updated to encompass the most current research findings and strategies for providing cost-effective and evidence-based care. It continues to address neonatal care from a physiologic and pathophysiologic perspective, with a major emphasis on nursing management at the bedside and advanced practice

level. It examines each neonatal body system and describes evidence-based interventions that assist in understanding the 'why' behind various clinical presentations. Integrative management is threaded throughout the text along with extensive research findings to support practice strategies and rationales for sound clinical decision-making. Case studies, evidence-based practice boxes, QSEN competencies, and online resources help to amplify and reinforce content. The book analyses some developments taking place in Italian IDs and local systems of production that can represent a new stage of evolution for the backbone of the Italian economy. Based on the extensive use of original

databases three main trajectories of change in IDs are presented. The first trajectory is the increasing role of "groups" of manufacturing SMEs arising from mergers and acquisitions as well as spin-off growth processes at the "family firms" level. The second one is the consolidation of innovation capabilities in IDs. And the third one is the internationalisation process of Italian IDs through both trade and foreign direct investment. The essays suggest that Italian IDs are again evolving by coherent adaptations which will have, however, uncertain outcomes.

This book outlines the important foundational insights for enterprise

governance and enterprise engineering, which are obviously provided by the social and organization sciences, but also by other sciences such as philosophy and information technology. It presents an employee-centric theory of organization in order to secure enterprise performance and also to comply with moral considerations about society and human individuals. This is necessary as prescriptions based on 'best practices' or the 'best managed companies' are often merely anecdotal, faddish, or controversial, and based on unsubstantiated pseudo-theories. The book consists of four main chapters, the first of which summarizes the importance of foundational insights for enterprises and explains the mutual relationships between the basic

elements of enterprise governance and enterprise engineering. Next, chapter 2 explains the necessary philosophical foundations concerning knowledge, truth, language, and human existence. Subsequently, chapter 3 describes the ontological foundation and the nature of society and enterprises, as understanding their characteristics is a prerequisite for understanding and designing enterprises. Finally, chapter 4 approaches ideological foundations as beliefs and convictions, as they create specific requirements for the design of enterprises. In this way, the book covers all the cornerstones of the employee-centric theory of organization, drawing on foundational insights. The book is mainly intended for students specializing in areas such as business administration,

management and organization science, governance, and enterprise and information systems design. However, professionals working in these areas will also benefit from the book, as it allows them to gain a deeper understanding of the theoretical foundations of their work and will thus help them to avoid strategic failures due to a lack of coherence and consistency between the various parts of their organization.

How can dedicated ethics committee members fulfill their complex roles as moral analysts, policy reviewers, and clinical consultants? The Joint Commission (TJC) accredits and certifies more than 19,000 health care

organizations in the United States, including hospitals, nursing homes, and home care agencies. Each organization must have a standing health care ethics committee to maintain its status. These interdisciplinary committees are composed of physicians, nurses, attorneys, ethicists, administrators, and interested citizens. Their main function is to review and provide resolutions for specific, individual patient care problems. Many of these committees are well meaning but may lack the information, experience, skills, and formal background in bioethics needed to adequately negotiate the complex ethical issues that arise in clinical and organizational settings. Handbook for Health Care Ethics Committees was the first book of its kind to address the

myriad responsibilities faced by ethics committees, including education, case consultation, and policy development. Adopting an accessible tone and using a case study format, the authors explore serious issues involving informed consent and refusal, decision making and decisional capacity, truth telling, the end of life, palliative care, justice in and access to health care services, and organizational ethics. The authors have thoroughly updated the content and expanded their focus in the second edition to include ethics committees in other clinical settings, such as long-term care facilities, small community hospitals, rehabilitation centers, and hospices. They have added three new chapters that address reproduction, disability, and the special needs of the

elder population, and they provide additional specialized policies and procedures on the book's website. This guide is an essential resource for all health care ethics committee members.

“Dottori, domani” considera con stile narrativo le basi pedagogiche e i problemi concreti che ri-guardano l’insegnamento e l’apprendimento nelle Scienze della salute e della cura in Italia. Tutti i capitoli – con l’intento di stimolare nei lettori una riflessione creativa – iniziano con un racconto, proiettato in un futuro abbastanza prossimo, nel presupposto che la formazione di oggi

deve ri- spondere adeguatamente alle domande di salute che incontreranno i professionisti di domani; segue un dialogo tra gli autori, che fa emergere gli aspetti problematici narrati nel racconto; ogni capitolo si conclude con numerosi approfondimenti teorici di natura pedagogica e con una sintesi dei contenuti. Il libro si propone come il primo testo italiano dedicato alle iniziative – sempre più necessarie – di “formazione dei formatori” in ambito sanitario.

The Oxford Handbook of Education and Training in Professional Psychology provides the first comprehensive treatment of the processes and current state-of-the art practices bearing on educating and training professional

psychologists. Thousands of psychologists are employed full-time as faculty members or clinical supervisors in graduate, practicum, internship, and postdoctoral training programs or training sites. This handbook provides a single resource that pulls together the substantial scholarship on education and training in psychology, covering the full spectrum of historic developments, salient issues, current standards, and emerging trends in psychology education and training. It provides a thorough analysis of doctoral and postdoctoral training for psychologists in clinical, counseling, or school psychology specialties. Because competency issues are moving to the forefront in the design of training programs and the evaluation of trainee performance, the handbook's

authors have made models and standards for competency a primary theme. This volume captures the current state of education and training while emphasizing emerging trends and forecasting future directions.

Consumer behaviour is one of the most explored topics in tourism and hospitality marketing, interchangeably denoted by the terms 'traveller behaviour', 'tourist behaviour' or 'guest behaviour'. Consumer behaviour acts as an origin for every tourism and hospitality marketing activity. It offers an understanding of why people tend to choose certain products or services and what sort of factors influence them in

making their decision. The decision process of buying tourism products or services takes time, because they are mostly intangible in nature due to which there are many risks involved in their buying process. The Routledge Handbook of Consumer Behaviour in Hospitality and Tourism aims to explore and critically examine current debates, critical reflections of contemporary ideas, controversies and pertinent queries relating to the rapidly expanding discipline of consumer behaviour in hospitality and tourism. The Handbook offers a platform for dialogue across disciplinary and national boundaries and areas of study through its diverse coverage. It is divided into six parts: Part I offers an overview of consumer behaviour; Part II focuses on the service

quality perspectives of consumer behaviour; Part III deliberates on customer satisfaction and consumer behaviour linkages; Part IV explores the re-patronage behaviour of consumers; Part V addresses the vital issues concerning online consumer behaviour; and Part VI elaborates upon other emerging paradigms of consumer behaviour. Although there is no dearth of empirical studies on different viewpoints of consumer behaviour, there is a scarcity of literature providing conceptual information. The present Handbook is organised to offer a comprehensive theoretical body of knowledge narrating consumer behaviour, especially for hospitality and tourism businesses and operations. It attempts to fill this research gap by

offering a 'globalised' volume comprising chapters organised using both practical and academic approaches. This Handbook is essential reading for students, researchers and academics of Hospitality as well as those of Tourism, Marketing, International Business and Consumer Behaviour.

In the current economic scenario, the intangible assets contribute significantly to the construction of the competitive

positioning of a company. It follows that this intangible information must be appropriately considered in the internal rating system (IRSs). Currently key aspects of business risk and operational risk such as potential for growth, competitive capabilities, core competencies, role in the supply chain of membership, and governance are being considered as secondary in this system. Intangible factors such as the milieu of the company and the environment in which it operates, are not being appropriately considered. In this book, Vincenzo Formisano proposes new guidelines aimed to set desirable IRSs in which the weight of intangible assets is appropriately and properly valued. He addresses practical rules for achieving a rating system capable of understanding

and enhancing the intangible assets of a company and for the assessment of creditworthiness. The first part of the book focuses on existing practices; the second part exposes a general model for the classification and interpretation of intangibles. The third part provides practical guidelines designed to configure desirable rating models in which the weight of intangible assets is correctly considered. This book offers theoretical and practical insights and an easy-to-read approach which provides a valuable source of information for teachers and students in Finance. It is also a useful reference point for the Banking, Accounting and Finance managerial communities.

L'idea di predisporre una raccolta di scritti in tema di controllo strategico nasce dall'esperienza, ormai pluriennale, di svolgimento del corso di "Controllo Strategico". La difficoltà di reperire testi e altro materiale bibliografico incentrato sulle principali tematiche affrontate nel corso ha infatti richiesto, in più occasioni, un'opera di selezione di vari contributi teorici, ripresi da diverse fonti, da indicare quale base per la preparazione dello studente. Il risultato è sempre stato di un programma d'esame assai articolato, frammentato, con un conseguente sforzo, in termini di docenza, di fornire un quadro di

riferimento univoco e la forte necessità di rifarsi continuamente ad un filo logico che collegasse i diversi materiali di studio e di supporto. Naturalmente uno sforzo "supplementare" ne è derivato anche per gli studenti, per i quali la frequenza delle lezioni è probabilmente risultata più che mai necessaria e, comunque, la preparazione dell'esame ha richiesto un approccio molto "flessibile" e modalità di studio e lavoro peculiari.

Corporate Management in a Knowledge-Based Economy traces the evolution of corporate governance over time, with a particular focus on the changing nature of power. The control of scarce resources used in production materials, labour and

capital has evolved considerably over the past centuries, with government, landowners, non-owner managers, and institutional investors acting as controlling powers at different points in time. In order to appropriately protect the various, and changing, stakeholders, the system of corporate governance has also developed over the years a process that continues to the present. In today's knowledge-based economy, with the rising importance of intangible assets, a new corporate management paradigm is needed. This book incorporates theoretical work as well as practical

applications to analyse these developments and explore emerging trends of the 21st century. It examines how the pursuit of profit maximization has resulted in governance failures and it focuses on the prospective role of business ethics (once again in the spotlight following the credit crisis) in helping reform flawed governance structures. It argues that, in the long term, a system based on ethics can maximize social responsibility, customer satisfaction, human capital development and economic targets.
