The global biodiversity and climate emergencies demand transformative changes to human activities. For example, food production relies on synthetic, industrial and non-sustainable products for managing pests, weeds and diseases of crops. Sustainable farming requires approaches to managing these agricultural constraints that are more environmentally benign and work with rather than against nature. Increasing pressure on synthetic products has reinvigorated efforts to identify alternative pest management options, including plant-based solutions that are environmentally benign and can be tailored to different farmers' needs, from commercial to small holder and subsistence farming. Botanical insecticides and pesticidal plants can offer a novel, effective and more sustainable alternative to synthetic

products for controlling pests, diseases and weeds. This Special Issue reviews and reports the latest developments in plant-based pesticides from identification of bioactive plant chemicals, mechanisms of activity and validation of their use in horticulture and disease vector control. Other work reports applications in rice weeds, combination biopesticides and how chemistry varies spatially and influences the effectiveness of botanicals in different locations. Three reviews assess wider questions around the potential of plant-based pest management to address the global challenges of new, invasive and established crop pests and as-yet underexploited pesticidal plants.

This book comprises chapters featuring a state of the art of research on digital technology in mathematics education. The chapters are extended versions of a selection of papers from the Proceedings of the 13th International Conference on Technology in Mathematics Teaching (ICTMT-13), which was held in Lyon, France, from July 3rd to 6th. ICTMT-13 gathered together over one hundred participants from twenty countries sharing research

and empirical results on the topical issues of technology and its potential to improve mathematics teaching and learning. The chapters are organised into 4 themed parts, namely assessment in mathematics education and technology, which was the main focus of the conference, innovative technology and approaches to mathematics education, teacher education and professional development toward the technology use, and mathematics teaching and learning experiences with technology. In 13 chapters contained in the book, prominent mathematics educators from all over the world present the most recent theoretical and practical advances on these themes. This book is of particular interest to researchers, teachers, teacher educators and other actors interested in digital technology in mathematics education.

INTRODUCTION TO AFRICAN SOCIAL POLICIES Macmillan

Children's Books

The second half of the 20th century and the beginning of the 21st century witnessed important changes in ecology, climate and human behaviour that favoured the development of urban pests. Most alarmingly, urban planners now face the dramatic expansion of urban sprawl, in which city suburbs are growing into the natural habitats of ticks, rodents and other pests. Also, many city managers now erroneously assume that pest-borne diseases are relics of the past. All these changes make timely a new analysis of the direct and indirect effects of present-day urban pests on health. Such an analysis should lead to the development of strategies to manage them and reduce the risk of exposure. To this end, WHO invited international experts in various fields - pests, pest-related diseases and pest management - to provide

evidence on which to base policies. These experts identified the public health risk posed by various pests and appropriate measures to prevent and control them. This book presents their conclusions and formulates policy options for all levels of decision-making to manage pests and pest-related diseases in the future. [Ed.]

The Power of Stata Graphics at Your Fingertips Whether you are new to Stata graphics or a seasoned veteran, this book teaches you how to use Stata to make high-quality graphs that stand out and enhance statistical results. With over 900 illustrated examples and quick-reference tabs, it offers a guide to creating and customizing graphs for any type of statistical data using either Stata commands or the Graph Editor. The author displays each graph example in full color with simple and clear instructions. He shows how to produce various types of graph elements, including marker symbols, lines, legends, captions, titles, axis labels, and grid lines. Reflecting the new graphics features of Stata, this thoroughly updated and expanded edition contains a new chapter that explains how to exploit the power of the new Graph Editor. This edition also includes additional examples and illustrates nearly every example with the Graph Editor.

English Vocabulary in Use Upper-Intermediate Book with Answers Birkhäuser

To move passengers and cargo, the Department of Defense

(DOD) must supplement its military aircraft with cargo and passenger aircraft from commercial carriers participating in the Civil Reserve Air Fleet (CRAF) program. Carriers participating in CRAF commit their aircraft to DOD to support a range of military operations. In the Fiscal Year 2008 National Defense Authorization Act, Congress required DOD to sponsor an assessment of CRAF and required GAO to review that assessment. GAO briefed congressional staff on its observations. As discussed with the staff, GAO further analyzed some of the issues identified in its review. This report assesses (1) the extent to which DOD has assessed potential risks to the CRAF program, and (2) the extent to which DOD's management of CRAF supports program objectives. For this engagement, GAO reviewed DOD-sponsored CRAF study reports and interviewed study leadership. GAO also interviewed over 20 of 35 CRAF participating carriers that responded to a request for a meeting, DOD officials, and industry officials. GAO is recommending that DOD

Marc Rivalland on Swing Trading Corwin UK

Extract from the Preface: '1. What the book covers This book is about day trading. Using the price action itself, rather than any of the usual array of indicators based on it. The US 30-year Treasury Bond Futures is the favoured instrument - the T-Bonds, as they are commonly called. There are good reasons for choosing this instrument to learn to trade - one being that they do not require a detailed knowledge of bonds themselves. The other attractions, whether you are a beginner or a seasoned veteran, are to do with liquidity, range, behaviour, patterns and the price action displayed at the key support and resistance points it encounters. Most days the T-bonds offer trading opportunities

which can be taken within a money management environment that can give you an edge for profit - and this book has been designed to show you how to do just that. Fully illustrated with charts taken from a live trading screen and displayed in exactly the way you would have seen them for yourself, on your computer monitor. What you see is not just what happened, in detail, but also clear evidence of just how you could have profited yourself from each trading situation. 2. Who the book is for This book has been written for anyone wishing to day trade, using a discretionary method, rather than a mechanical system. It is a learning tool which should commend itself to the experienced trader, as much as to someone new to this business. Certainly I hope that any raw recruit would find it an easy read, even if it took a while longer to digest the subject matter as a whole. 3. How the book is structured The seasoned trader will probably start by skip reading, to see if he can cut to the chase quickly. The less experienced will immediately see - from the detail of the charts alone - that there is a great deal of info

The Spanish Tragedie American Academic Press

This book highlights recent research on bio-inspired computing and its various innovative applications in Information and Communication Technologies. It presents 50 high-quality papers from the 9th International Conference on Innovations in Bio-Inspired Computing and Applications (IBICA 2018) and 7th World Congress on Information and Communication Technologies (WICT 2018), which was held at Toc H Institute of Science and Technology (TIST) on December 17-19, 2018. IBICA-WICT 2018 was a premier conference and brought together researchers, engineers and practitioners whose work involved bio-inspired

computing, computational intelligence and their applications in information security, real-world contexts etc. Including contributions by authors from 22 countries, the book offers a valuable reference guide for all researchers, students and practitioners in the fields of Computer Science and Engineering.

The proactive approach to the stock market - don't be a victim - there is something you can do about it. Swing trading is an approach to the stock market which is concerned less with value (a moveable feast as many have found out), and more with exploiting short-term upswings and downswings in share prices and market indices. Although the ranks of swing traders swell daily, not many traders know that there is a type of chart, a swing chart, which is designed specifically for swing trading. In this ground-breaking book, Marc Rivalland, author of 'The Trader' column in Investors Chronicle, shows how swing charts can be used to perfect market timing. Moreover, Marc reveals his hitherto secret modifications to Gann swing charts which make them even more effective for stock market traders. W. D. Gann said "a study of swings in active stocks will convince a man that he can make far greater profits in swings than in any other way of trading." With this book, you get Gann and more. In addition, Marc uses his two decades of experience with point & figure charts to bring to readers an up-to-date and thoroughly modern evaluation of the best point & figure signals to use when trading individual equities. Point & figure is enjoying an enormous resurgence.

Readers of this book will discover new insights into this proven and popular 100+year old method of charting share prices. Marc reveals his proprietary method of integrating swing charts and point & figure charts to further increase the chances of success. There is a chapter on the vital RSI indicator and a chapter devoted solely to those more passively inclined - long-term buy-and-hold investors. In every case, the best trading tactics are discussed. Each technique is critically examined. The advantages are highlighted but t

The five-volume set IFIP AICT 630, 631, 632, 633, and 634 constitutes the refereed proceedings of the International IFIP WG 5.7 Conference on Advances in Production Management Systems, APMS 2021, held in Nantes, France, in September 2021.* The 378 papers presented were carefully reviewed and selected from 529 submissions. They discuss artificial intelligence techniques, decision aid and new and renewed paradigms for sustainable and resilient production systems at four-wall factory and value chain levels. The papers are organized in the following topical sections: Part I: artificial intelligence based optimization techniques for demand-driven manufacturing; hybrid approaches for production planning and scheduling; intelligent systems for manufacturing planning and control in the industry 4.0; learning and robust decision support systems for agile manufacturing environments; low-code and model-driven engineering for production system; meta-heuristics and optimization techniques for energy-oriented manufacturing systems; metaheuristics for production systems; modern analytics and new AI-based smart techniques for replenishment and production planning under uncertainty;

system identification for manufacturing control applications; and the future of lean thinking and practice Part II: digital transformation of SME manufacturers: the crucial role of standard; digital transformations towards supply chain resiliency; engineering of smart-product-service-systems of the future; lean and Six Sigma in services healthcare; new trends and challenges in reconfigurable, flexible or agile production system; production management in food supply chains; and sustainability in production planning and lot-sizing Part III: autonomous robots in delivery logistics; digital transformation approaches in production management; finance-driven supply chain; gastronomic service system design; modern scheduling and applications in industry 4.0; recent advances in sustainable manufacturing; regular session: green production and circularity concepts; regular session: improvement models and methods for green and innovative systems; regular session: supply chain and routing management; regular session: robotics and human aspects; regular session: classification and data management methods; smart supply chain and production in society 5.0 era; and supply chain risk management under coronavirus Part IV: AI for resilience in global supply chain networks in the context of pandemic disruptions; blockchain in the operations and supply chain management; data-based services as key enablers for smart products, manufacturing and assembly; data-driven methods for supply chain optimization; digital twins based on systems engineering and semantic modeling; digital twins in companies first developments and future challenges; human-centered artificial intelligence in smart manufacturing for the operator 4.0; operations management in engineer-to-order

manufacturing; product and asset life cycle management for smart and sustainable manufacturing systems; robotics technologies for control, smart manufacturing and logistics; serious games analytics: improving games and learning support; smart and sustainable production and supply chains; smart methods and techniques for sustainable supply chain management; the new digital lean manufacturing paradigm; and the role of emerging technologies in disaster relief operations: lessons from COVID-19 Part V: data-driven platforms and applications in production and logistics: digital twins and AI for sustainability; regular session: new approaches for routing problem solving; regular session: improvement of design and operation of manufacturing systems; regular session: crossdock and transportation issues; regular session: maintenance improvement and lifecycle management; regular session: additive manufacturing and mass customization; regular session: frameworks and conceptual modelling for systems and services efficiency; regular session: optimization of production and transportation systems; regular session: optimization of supply chain agility and reconfigurability; regular session: advanced modelling approaches; regular session: simulation and optimization of systems performances; regular session: AI-based approaches for quality and performance improvement of production systems; and regular session: risk and performance management of supply chains *The conference was held online. Computational Finance John Wiley & Sons

Secrets of a Pivot Boss offers the most comprehensive collection of pivot-related trading ideas and concepts available to traders. Whether you are a real-time trader, swing trader, position trader, or investor, you will find great value in this book, regardless of the markets you trade or your level of experience. Frank Ochoa has analyzed the market every day over the past 12 years and has cultivated the techniques in this book into a fine art using the best leading indicators available to traders. The concepts in this book will help you become a more knowledgeable and confident trader. Professional traders use tools that are based purely on price, which is a leading indicator in its own class. In this book, we will discover the best leading indicators available to traders, including the Money Zone, Floor Pivots, and the Camarilla Equation. While you may have studied forms of pivots in the past, Frank Ochoa provides a fresh perspective that can only be described as a truly unique approach to playing these amazing levels for profit. You'll learn powerful concepts like Two-Day Pivot Relationships, Pivot Width Forecasting, Pivot Trend Analysis, and

Multiple Pivot Hot Zones. Not only will you learn about incredible pivot relationships, but Frank will also divulge his best trading secrets, including Powerful Candlestick Setups, the Types of Trading Days, the Types of Buyers and Sellers, Powerful Setups, and Proprietary Indicators. Taking this a step farther, Frank also provides the actual code to each of the scripts that he's written and covered in the book! Secrets of a Pivot Boss brings a fresh approach to these powerful concepts that you will not find anywhere else.

Volume Profile, Market Profile, Order Flow: Next Generation of Daytrading Classical technical analysis, as taught in hundreds of books, proves to be unprofitable for traders in many cases. Well-known chart patterns and indicators can only analyze the past. This book clearly shows why the myth of self-fulfilling prophecies has long been nothing more than an illusion. Instead, it presents in an understandable way highly effective technical tools that can help a day trader look behind the scenes and assess trading situations in the here and now. The book explains how to locate real movements from the beginning how to follow the tracks of dominant players what you really need to know about charts how to avoid mistakes how to plan and implement a day trade in a few minutes This book was written for daytraders who are looking for new ways. It is also suitable for beginners who want to avoid a long way through a labyrinth of frustrating experiences. For European daytraders there is no alternative to absolutely fair priced Micro, Mini Futures and CFD's. Trading instruments are a few highly liquid futures like Dax, S&P 500, Nasdaq, Euro, Bund,

Crude Oil or Gold. Basic insights about trade sizes, leverage, futures exchanges and other terms can be learned free of charge in a few days on any serious financial site and are not the subject of this book. Contents mainly refer to reality-related methods. Anyone entering this field should answer a few realistic questions, which will be discussed throughout the book. The author was personally trained 18 years ago by one of the most experienced US futures traders and worked for a renowned Swiss trading house for asset management. Daytrading has been his specialty for 22 years. Pages: 216

Secrets of a Pivot Boss World Health Organization

Speaking directly to the growing importance of research experience in undergraduate mathematics programs, this volume offers suggestions for undergraduate-appropriate research projects in mathematical and computational biology for students and their faculty mentors. The aim of each chapter is twofold: for faculty, to alleviate the challenges of identifying accessible topics and advising students through the research process; for students, to provide sufficient background, additional references, and context to excite students in these areas and to enable them to successfully undertake these problems in their research. Some of the topics discussed include:

- Oscillatory behaviors present in real-world applications, from seasonal outbreaks of childhood diseases to action potentials in neurons
- Simulating bacterial growth, competition, and resistance with agent-based models and laboratory experiments
- Network structure and the dynamics of biological systems
- Using neural networks to identify bird species from birdsong samples
- Modeling fluid flow induced by the motion of pulmonary cilia

Aimed at undergraduate

mathematics faculty and advanced undergraduate students, this unique guide will be a valuable resource for generating fruitful research collaborations between students and faculty.

Advances in Production Management Systems. Artificial Intelligence for Sustainable and Resilient Production Systems
SAGE

This document is a collection of slang terms used by various subcultures of computer hackers. Though some technical material is included for background and flavor, it is not a technical dictionary; what we describe here is the language hackers use among themselves for fun, social communication, and technical debate.

A Festive Feast Simon and Schuster

The second edition of a comprehensive introduction to all aspects of mobile robotics, from algorithms to mechanisms. Mobile robots range from the Mars Pathfinder mission's teleoperated Sojourner to the cleaning robots in the Paris Metro. This text offers students and other interested readers an introduction to the fundamentals of mobile robotics, spanning the mechanical, motor, sensory, perceptual, and cognitive layers the field comprises. The text focuses on mobility itself, offering an overview of the mechanisms that allow a mobile robot to move through a real world environment to perform its tasks, including locomotion, sensing, localization, and motion planning. It synthesizes material from such fields as kinematics, control theory, signal analysis, computer vision, information theory, artificial intelligence, and probability theory. The book presents the techniques and technology that enable mobility in a series of interacting modules. Each chapter treats a different aspect of mobility, as

the book moves from low-level to high-level details. It covers all aspects of mobile robotics, including software and hardware design considerations, related technologies, and algorithmic techniques. This second edition has been revised and updated throughout, with 130 pages of new material on such topics as locomotion, perception, localization, and planning and navigation. Problem sets have been added at the end of each chapter. Bringing together all aspects of mobile robotics into one volume, *Introduction to Autonomous Mobile Robots* can serve as a textbook or a working tool for beginning practitioners. Curriculum developed by Dr. Robert King, Colorado School of Mines, and Dr. James Conrad, University of North Carolina-Charlotte, to accompany the National Instruments LabVIEW Robotics Starter Kit, are available. Included are 13 (6 by Dr. King and 7 by Dr. Conrad) laboratory exercises for using the LabVIEW Robotics Starter Kit to teach mobile robotics concepts.

An Introduction to Undergraduate Research in Computational and Mathematical Biology MIT Press

The science behind navigation. Starts with an in-depth look at the longitude problem from the 1700s, then goes into the science of timekeeping, and celestial navigation. Ends with a chapter concerning modern ideas of time and navigation, including a look at Einstein's time dilation and GPS. Updated and revised October 2018.

Massachusetts Amendments Springer

This book constitutes the proceedings of the 31st Australasian Joint Conference on Artificial Intelligence, AI 2018, held in Wellington, New Zealand, in December 2018. The 50 full and 26 short papers presented in this volume were carefully reviewed

and selected from 125 submissions. The papers were organized in topical sections named: agents, games and robotics; AI applications and innovations; computer vision; constraints and search; evolutionary computation; knowledge representation and reasoning; machine learning and data mining; planning and scheduling; and text mining and NLP.

My Valiant Knight Cengage Learning

From the precolonial period to today, Julien Bokilo analyzes the effectiveness of social and economic measures undertaken for the development of the Republic of Congo with regard to all of sub-Saharan Africa. This documented and unprecedented sociohistorical study feeds on new perspectives in public policy planning, development and implementation. • The knowledge of specificities of poverty and exclusion in the African countries; • The possibility of making the correlation and the transposition of the principles of the public policies on the African facts, the case of the reintegration of the native populations and the albinos. In addition, the relevance of this work is in the fact that it tackles the question of the struggle against the poverty and the exclusion, which are problems whose recurrence is quasi endemic and alarming in the process of the socio-economic and political development process of African countries. Also, in an economic context of unprecedented crisis in the Republic of Congo and in the surrounding countries, the economic zone of the central Africa sub-area mainly, the social policies are of an interest somehow crucial for their capacities to suppress the harmful effects of the recessions. In fact, this work really meets a scientific expectation, as it is based on verifiable arguments, because founded on the theory and the facts.
