Resources for Teaching Middle School Science Bioversity International
 With age-appropriate, inquiry-centered curriculum materials and sound teaching practices, middle school science can

capture the interest and energy of adolescent students and expand their understanding of the world around them. Resources for Teaching Middle School Science, developed by the National Science Resources Center (NSRC), is a valuable tool for identifying and selecting effective science curriculum materials that will engage students in grades 6 through 8. The volume describes more than 400 curriculum titles that are aligned with the National Science Education Standards. This completely new guide follows on the success of Resources for Teaching Elementary School Science, the first in the NSRC series of annotated guides to hands-on, inquiry-centered curriculum materials and other resources for science teachers. The curriculum materials in the new guide are grouped in five chapters by scientific area—Physical Science, Life Science, Environmental Science, Earth and Space Science, and Multidisciplinary and Applied Science. They are also grouped by type—core materials, supplementary units, and science activity books. Each annotation of curriculum material includes a recommended grade level, a description of the activities involved and of what

students can be expected to learn, a list of accompanying materials, a reading level, and ordering information. The curriculum materials included in this book were selected by panels of teachers and scientists using evaluation criteria developed for the guide. The criteria reflect and incorporate goals and principles of the National Science Education Standards. The annotations designate the specific content standards on which these curriculum pieces focus. In addition to the curriculum chapters, the guide contains six chapters of diverse resources that are directly relevant to middle school science. Among these is a chapter on educational software and multimedia programs, chapters on books about science and teaching, directories and guides to science trade books, and periodicals for teachers and students. Another section features institutional resources. One chapter lists about 600 science centers, museums, and zoos where teachers can take middle school students for interactive science experiences. Another chapter describes nearly 140 professional associations and U.S. government agencies that offer

resources and assistance. Authoritative, extensive, and thoroughly indexed—and the only guide of its kind—Resources for Teaching Middle School Science will be the most used book on the shelf for science teachers, school administrators, teacher trainers, science curriculum specialists, advocates of hands-on science teaching, and concerned parents.

Religious language is all around us, embedded in advertising, politics and news media. This book introduces readers to the field of theolinguistics, the study of religious language. Investigating the ways in which people talk to and about God, about the sacred and about religion itself, it considers why people make certain linguistic choices and what they accomplish. Introducing the key methods required for examining religious language, Valerie Hobbs acquaints readers with the most common and important theolinguistic features and their functions. Using critical corpus-assisted discourse analysis with a focus on archaic and other lexical features, metaphor, agency and intertextuality, she examines religious language in context. Highlighting its use in both expected locations, such as modern-day prayer and politics, and unexpected locations including advertising, sport, healthcare and news media, Hobbs analyses the shifting and porous linguistic boundaries between the religious and the secular. With discussion questions and

further readings for each chapter, as well as a companion website featuring suggested answers to the reflection tasks, this is the ideal introduction to the study of religious language.
