Excavations at the

and the Israel Antiquities Authority, have attracted considerable scholarly and media attention since the very first season, when the discovery of an inscribed ostrakon sparked controversies over the site's historical significance and nature. Located at the entrance of the Elah Valley, protected by a casemate wall and two monumental gateways, the settlement of Qeiyafa existed for barely half a century. Its dating and the correlation of the archaeological evidence with the regional history, not least the rise of an early Judahite monarchy, have become matters of intense academic debate. Resulting from a colloquium of the

Swiss Society of Ancient Near Eastern Studies, this volume offers a condensed report by main excavator Yosef Garfinkel as well as several in-depth studies on archaeological, historical, epigraphical, iconographical and biblical issues.

Modern technology has changed the way we live, work, play,

communicate, fight, love, and die. Yet few works have systematically explored these changes in light of their implications for individual and social welfare. How can we conceptualize and evaluate the influence of technology on human well-being? Bringing together scholars from a cross-section of disciplines, this volume combines an empirical investigation of technology and its social, psychological, and political effects, and a philosophical analysis and evaluation of the implications of such effects.

*Biosorption for Wastewater Contaminants* John Wiley & Sons  
Pollution due to various anthropogenic

activities continues to increase. In terms of water pollutants, organic and inorganic pollutants are the most problematic. Although several measures have been proposed and implemented to prevent or reduce contamination, their increased concentration in water bodies has created serious concerns. Over the years, the problem has been aggravated by industrialization, urbanization and the exploitation of natural resources. The direct discharge of wastewater contaminants and their geographical mobilization have caused an increase in concentration in ground, surface, fluvial and residual waters. Extensive information about detection and

disposal methods is needed in order to develop technological solutions for a variety of environments, both urban and rural. This book provides up-to-date information on wastewater contaminants, aimed at researchers, engineers and technologists working in this field. Conventional physicochemical techniques used to remove contaminants from wastewater include ion exchange, precipitation, degradation, coagulation, coating, membrane processes and adsorption. However, these applications have technological and economic limitations, and involve the release of large amounts of chemical reagents and

by-products that are themselves difficult to remove. Biosorption - the use of organically generated material as an adsorbent - is attracting new research and scholarship. Thermally-treated calcined biomaterials may be treated to remove heavy metals from wastewater. To ensure the elimination of these contaminants, existing solutions must be integrated with intelligent biosorption functions. Biosorption for Wastewater Contaminants will find an appreciative audience among academics and postgraduates working in the fields of environmental biotechnology, environmental engineering, wastewater treatment

technology and environmental chemistry.

This book recounts the events involving Raquel Liberman, an impoverished immigrant to Argentina that was forced by circumstances into prostitution, and the powerful Zwi Migdal, which controlled the recruitment and deployment of Jewish prostitutes in Argentina while maintaining mutually profitable relations with corrupt politicians and policemen. Liberman's story is presented as an example of individual courage and determination in the face of the violence and corruption of the prostitution business. Her struggle with the Zwi Migdal and triumphant public

victory over her oppressors was widely publicized in newspapers and magazines, and was a political cause celebre in its time. This book gives readers an intimate view of how the affair caught the public imagination, and was interpreted and transformed by the artistic imagination.

"Was there a difference in the portrayal of King Zedekiah in the Hebrew and Greek versions of Jeremiah? Shelley L. Birdsong analyses the two different depictions, highlights their unique characterizations and argues that the cruel and manipulative king in the Greek is edited into a more compassionate king in

the Hebrew." -- back cover

*The Face* Cambridge University Press  
Initiation to the Secrets of the Cosmos is the first book in Sylvia Leifheits upcoming series INITIATION. A spiritual energy bible for some, a compendium of cosmic questions for others, this book is first and foremost the initiation into the vast spiritual knowledge of a soul who has experienced countless incarnations on this as well as on other planets. The book provides us with an overview of the state of mankind and explains the laws of free will and the meaning of suffering, and it clarifies the correlation of action and reaction by demonstrating how spiritual purity and

spiritual awareness are closely interdependent of another throughout the soul's journey through its many incarnations. On the practical side, this book also deals with the general problems of being human, discussing common questions about the role of labour and profession, of family life, as well as birth and death. Through her innate gift of psychographic channeling, combined with a fair share of human curiosity, Sylvia Leifheits dialogues with the spiritual entities take us on an extraordinary journey to the centre of our own soul. Negative beliefs, religious dogma, hardwired, subconscious behaviour and many more all too familiar

phenomena will lose their importance when seen through the eyes of the eternal soul. The spiritual entities answers to our deepest questions will allow us to live more fully in the eternal now. Be ready to trust the waking call of your soul.

The sweetness of music is something that has puzzled Christian theologians for centuries. In this study, Luther's theology of music is approached from the point of view of pleasure. It examines the significance of joy, beauty and pleasure in relationship with music and Luther's theology. The notion of music as the supreme gift of God requires also a

discussion about the idea of 'gift'. Music opens up new perspectives into Luther's thinking. Luther has seldom been reckoned among aesthetic theologians. Nevertheless, Luther has a peculiar view on beauty, understanding faith as a kind of aesthetic contemplation.

Understanding and predicting fluid flow in hydrocarbon shale and other non-conventional reservoir rocks Oil and natural gas reservoirs found in shale and other tight and ultra-tight porous rocks have become increasingly important sources of energy in both North America and East Asia. As a result, extensive research in recent

decades has focused on the mechanisms of fluid transfer within these reservoirs, which have complex pore networks at multiple scales. Continued research into these important energy sources requires detailed knowledge of the emerging theoretical and computational developments in this field. Following a multidisciplinary approach that combines research in engineering, geosciences and rock physics, *Physics of Fluid Flow and Transport in Unconventional Reservoir Rocks* provides both academic and industrial readers with a thorough grounding in this cutting-edge area of rock geology,

combining an explanation of the underlying theories and models with practical applications in the field. Readers will also find: An introduction to the digital modeling of rocks Detailed treatment of digital rock physics, including decline curve analysis and non-Darcy flow Solutions for difficult-to-acquire measurements of key petrophysical characteristics such as shale wettability, effective permeability, stress sensitivity, and sweet spots *Physics of Fluid Flow and Transport in Unconventional Reservoir Rocks* is a fundamental resource for academic and industrial researchers in hydrocarbon exploration, fluid flow,

and rock physics, as well as professionals in related fields.

Chemical peels have been used to rejuvenate the skin for millennia but have only become the focus of scientific research within the last century. This book outlines the steps for accomplishing successful chemical

peels-whether superficial, medium, or deep. Starting with basic current knowledge, the authors review the essentials, including the different agents used and their formulae as well as the proper techniques. In addition, the authors explain the art of chemical peels by showing how to provide an optimal, individually tailored treatment that takes into consideration the skin quality of each patient. Procedures are detailed step by step, and numerous tables summarize key information for quick reference. Case reports demonstrate the efficacy and lasting results of this skin rejuvenation modality. The book is designed for all dermatologists, plastic surgeons, and

physicians who want to learn how to perform chemical peels or who want to extend their knowledge of individual aspects of this method.

The detection of human skin in images is a very desirable feature for applications such as biometric face recognition, which is becoming more frequently used for, e.g., automated border or access control.

However, distinguishing real skin from other materials based on imagery captured in the visual spectrum alone and in spite of varying skin types and lighting conditions can be difficult and unreliable.

Therefore, spoofing attacks with facial

disguises or masks are still a serious problem for state of the art face recognition algorithms.

This dissertation presents a novel approach for reliable skin detection based on spectral remission properties in the short-wave infrared (SWIR) spectrum and proposes a cross-modal method that enhances existing solutions for face verification to ensure the authenticity of a face even in the presence of partial disguises or masks.

Furthermore, it presents a reference design and the necessary building blocks for an active multispectral camera system that implements this approach, as well as an in-depth evaluation.

The system acquires four-band multispectral

images within T = 50ms. Using a machine-learning-based classifier, it achieves unprecedented skin detection accuracy, even in the presence of skin-like materials used for spoofing attacks. Paired with a commercial face recognition software, the system successfully rejected all evaluated attempts to counterfeit a foreign face.

A compilation of expressions, questions and answers that came about in response to Leo's highly praised first book *Awakening to*

the Dream. Leo writes with characteristic insight and uses metaphor to illuminate the paradoxical and apparently confusing nature of non-dual reality. His original writing is reinforced by a vast knowledge of non-duality in other spiritual traditions and he weaves these together with his own direct path to present clear pointers to contemporary seekers. An appropriately chosen quotation taken from various sources appears at the end of each short chapter. Also included at the end of the book is the full text of the Hsin-hsin Ming by the third Chan patriarch Seng-ts'an. "The words in this book repeatedly point to the essence which knows the reading as it takes

place. Rather than an encouragement to follow a lengthy path, it is an invitation to step off the path. It does not point to 'your' awareness, but to Awareness itself in which the idea of 'you' appears. It does not point to 'your' beingness, but to the undeniable Beingness that appears as you."

As water scarcities increase, nations throughout the world are in search of better institutions to manage water resources. India has been making substantial efforts to develop its water management systems since independence and significant increases in irrigated agriculture have taken place through both public and private initiatives. However, scarcities are increasing and major problems presently confront the management of water resources and irrigated agriculture. Resolving these problems is crucial for the future. The main purpose of this book is to provide a new approach for the

analysis and design of water institutions that govern the use and development of water resources, particularly for agriculture which is the largest user. Drawing on the theory of New Institutional Economics and comparisons with Australia (as a developed country) and other less developed nations in Africa and Asia, the authors present original empirical data from three Indian states. Detailed analysis of these data is used to identify and recommend attributes and features of water management institutions that are conducive to effective resource management, its long-term success, and its best contribution to development.
