In this book, Yasheng Huang makes a provocative claim: the large absorption of foreign direct investment (FDI) by China is a sign of some substantial weaknesses in the Chinese economy. The primary benefits associated with China's FDI inflows are concerned with the privatization functions supplied by foreign firms, venture capital provisions to credit-constrained private entrepreneurs, and promotion of interregional capital mobility. Huang argues that one should ask why domestic firms cannot supply the same functions. China's partial reforms, while successful in increasing the scope of the market, have so far failed to address many allocative inefficiencies in the Chinese economy.

Guidelines for Open Pit Slope Design is a comprehensive account of the open pit slope design process. Created as an outcome of the Large Open Pit (LOP) project, an international research and technology transfer project on rock slope stability in open pit mines, this book provides an up-to-date compendium of knowledge of the slope design processes that should be followed and the tools that are available to aid slope design practitioners. This book links innovative mining geomechanics research into the strength of closely jointed rock masses with the most recent advances in numerical modelling, creating more effective ways for predicting rock slope stability and reliability in open pit mines. It sets out the key elements of slope design, the required levels of effort and the acceptance criteria that are needed to satisfy best practice with respect to pit slope investigation, design, implementation and performance monitoring. Guidelines for Open Pit Slope Design comprises 14 chapters that directly follow the life of mine sequence from project commencement through to closure. It includes: information on gathering all of the field data that is required to create a 3D model of the geotechnical conditions at a mine site; how data is collated and used to design the walls of the open pit; how the design is implemented; up-to-date procedures for wall control and performance assessment, including limits blasting, scaling, slope support and slope monitoring; and how formal risk management procedures can be applied to each stage of the process. This book

will assist in meeting stakeholder requirements for pit slopes that are stable, in regards to safety, ore recovery and financial return, for the required life of the mine.

The Origins of Writing U of Nebraska Press

This volume contains the papers presented at the First Mexico-U.S.A. Symposium on Materials Sciences and Engineering held in Ixtapa, Guerrero, Mexico, during September 24-27, 1991. The conference was conceived with the primary objective of increasing the close ties between scientists and engineers in both Mexico and the U.S. with an interest in materials. The conference itself would have not taken place without the drive, determination and technical knowledge of John K. Tien of the University of Texas at Austin and of Francisco Mejia Lira of the Universidad de San Luis Potosi. This book is dedicated to their memory. The event brought together materials scientists and engineers with interests in a broad range of subjects in the processing, characterization and properties of advanced materials. Several papers were dedicated to structural materials ranging from ferrous alloys to intermetallics, ceramics and composites. The presentation covered properties, processing, and factors that control their use, such as fatigue and

corrosion. Other materials and properties were also explored by U.S. and Mexican participants. Several papers dealt with the characterization and properties of magnetics, optical and superconductor materials, nanostructured materials, as well as with computational and theoretical aspects likely to impact future materials research and development.

**The Consulting Apprenticeship** SAGE Universally acclaimed for their compelling narrative, their fresh insights, and their objective renderings of Winston Churchill's life, *The Last Lion* trilogy presents a revelatory and unparalleled portrait of this brilliant, flawed, and dynamic adventurer, aristocrat, soldier, and statesman. Born at the end of the 19th century when Imperial Britain still stood at the splendid pinnacle of her power, Churchill would witness the shift a few years later as the Empire hovered on the brink of a catastrophic new era. One of the greatest wartime leaders of our time, he would go on to stand alone, politically isolated in Parliament, as he took the lead in warning of the growing Nazi threat, and would lead Britain to victory against Nazi Germany and the Axis powers in World War II. Now, celebrated historian William Manchester's landmark biographies are collected together for the first time, along with the eagerly anticipated final installment Churchill's

last years in power. More than thirty years in the making, *The Last Lion* is the definitive work on this remarkable man whose courageous vision guided the destiny of a nation during darkly troubled times-and who looms as one of the greatest figures of our century.

The First Edition of *InterViews* has provided students and professionals in a wide variety of disciplines with the “whys” and “hows” of research interviewing, preparing students for learning interviewing by doing interviews and by studying examples of best practice. The thoroughly revised Second Edition retains its original seven-stage structure, continuing to focus on the practical, epistemological, and ethical issues involved with interviewing. Authors Steinar Kvale and Svend Brinkmann also include coverage of newer developments in qualitative interviewing, discussion of interviewing as a craft, and a new chapter on linguistic modes of interview analysis. Practical and conceptual assignments, as well as new “tool boxes,” provide students with the means to dig deeper into the material presented and achieve a more meaningful level of understanding.
