This title includes a number of Open Access chapters. Childhood obesity is a major public health crisis nationally and internationally. This insightful compendium provides valuable information and assesses the research foundations behind several school initiatives to help combat the epidemic of obesity in children and adolescents, particularly using interventions to increase physical activity. The book looks at the issue from three levels: first, the effects of unhealthy eating and lack of exercise on a number of health outcomes in children and adolescents; second, successful small- and large-scale school-based interventions; and finally, synthesis of current literature and translation into specific guidelines and recommendations. Specific topics addressed in the book include: • The appeal and benefits of outdoor versus indoor activity • Cultural differences in physical activity •

Successful interventions and their continued success, or lack of, after several years • The roles of family and community interventions • Staff involvement in children's physical activities • Specific programs, such as Plant Health, an antismoking intervention with unintended obesity intervention • Establishing healthy habits in youth This research provides schools with a strong foundation for implementing policies and practices that support healthy eating and regular physical activity. In the process, educators will be ensuring the best possible chance for increasing students' academic success, improving both physical and mental health, and decreasing the risk for myriad chronic diseases.

*Measurement and Evaluation in Human Performance, Sixth Edition With HKPropel Access*, guides students through the essentials of collecting and analyzing data of human performance and using that data in practical application. Introductory

algebraic concepts are combined with the technological capabilities of Microsoft Excel and IBM's SPSS software to aid students in calculations and data analysis. Focusing on the core concepts of reliability and validity of data, the text provides all the necessary tools for evidence-based decision making to apply in kinesiology, sport and exercise science, physical therapy, allied health, physical education, health, and fitness. The sixth edition of *Measurement and Evaluation in Human Performance* has been reorganized to offer a logical progression of information that makes it easy for instructors and students to apply the content to their specific courses and career goals. It is enhanced with added expertise from new coauthor Weimo Zhu, an internationally known scholar in Kinesmetrics who served as the chair of the Measurement and Evaluation Council of SHAPE America. The amount of information on physical activity assessment has been increased across all chapters, and the text includes new content about sport video analysis apps, employment-related testing, and more. The text is divided into four parts. Part I introduces the concepts of measurement

and evaluation and their importance for decision making in human performance. Part II explains the use of statistics as core tools and resources for these evaluations and explains the various forms of statistical procedures often used in measurement. Part III presents reliability and validity from theoretical, comprehensive, and criterion-referenced perspectives. Skills gained through previous sections are applied to human performance issues such as evaluating a person's aerobic capacity or muscular strength. Part IV applies all of the content from the previous sections to practical settings where students will use the knowledge gained in the text, covering topics like fitness assessment, performance assessment, motor behavior, and sport and exercise psychology. To enhance student comprehension and retention, related online learning aids are delivered through HKPropel. Sample data sets allow students to practice data analysis, as do a wide range of study and practice activities. Chapter quizzes may be assigned to students by instructors and are automatically graded within HKPropel. In addition, Mastery Item sidebars

throughout the text include problems and activities that test student knowledge, while Measurement and Evaluation Challenge sidebars provide scenarios that can be evaluated with the information from the chapter. *Measurement and Evaluation in Human Performance, Sixth Edition*, continues to provide students with the tools and confidence they will need to gather reliable data, analyze it, and apply it in their work with clients. Note: A code for accessing HKPropel is not included with this ebook but may be purchased separately.

From the creator of the popular website Ask a Manager and New York's work-advice columnist comes a witty, practical guide to 200 difficult professional conversations—featuring all-new advice! There's a reason Alison Green has been called "the Dear Abby of the work world." Ten years as a workplace-advice columnist have taught her that people avoid awkward conversations in the office because they simply don't know what to say. Thankfully, Green does—and in this incredibly helpful book, she tackles the

tough discussions you may need to have during your career. You'll learn what to say when • coworkers push their work on you—then take credit for it • you accidentally trash-talk someone in an email then hit “reply all” • you're being micromanaged—or not being managed at all • you catch a colleague in a lie • your boss seems unhappy with your work • your cubemate's loud speakerphone is making you homicidal • you got drunk at the holiday party Praise for Ask a Manager “A must-read for anyone who works . . . [Alison Green's] advice boils down to the idea that you should be professional (even when others are not) and that communicating in a straightforward manner with candor and kindness will get you far, no matter where you work.”—Booklist (starred review) “The author's friendly, warm, no-nonsense writing is a pleasure to read, and her advice can be widely applied to relationships in all areas of readers' lives. Ideal for anyone new to the job market or new to management, or anyone hoping to improve their work experience.”—Library Journal (starred review) “I am a huge fan of Alison Green's Ask a Manager column.

This book is even better. It teaches us how to deal with many of the most vexing big and little problems in our workplaces—and to do so with grace, confidence, and a sense of humor.”—Robert Sutton, Stanford professor and author of *The No Asshole Rule* and *The Asshole Survival Guide* “Ask a Manager is the ultimate playbook for navigating the traditional workforce in a diplomatic but firm way.”—Erin Lowry, author of *Broke Millennial: Stop Scraping By and Get Your Financial Life Together* *Fitness for Life* Human Kinetics Lesson plans for physical education including climbing walls, lacross, in-line skating. Human Motor Development Human Kinetics  
 This book grew out of discussion at the meetings of the Board of Scientific Affairs of the American Psychological Association during the years 1972 through 1975. Members of the board felt that there was general misunderstanding by the public about the role of basic research in science. The problem was thought to be particularly severe in the case of the behavioral sciences but it appeared to be a reflection of a more general anti-intellectual attitude in the United States. At the same time basic researchers had been admittedly underconcerned with the

practical application of their results. Yet many thoughtful scientists realize there is a very fruitful interplay between basic research and application. The proposal was made to prepare a book of case studies that demonstrate the application of basic research in psychology. The book was organized to sample applications from a range of topics in psychology. The editorial board divided up responsibilities for these topics. Herschel W. Leibowitz focused on applications from experimental and engineering psychology and Jerome E. Singer organized the section on applications to social problems. Alfred Steinschneider took responsibility for the section on clinical applications of basic

research in psychology and Harold W. Stevenson organized the section on applications of basic research to developmental and educational problems.

**Lifespan Approach** Human Kinetics Physical fitness affects our ability to function and be active. At poor levels, it is associated with such health outcomes as diabetes and cardiovascular disease. Physical fitness testing in American youth was established on a large scale in the 1950s with an early focus on performance-related fitness that gradually gave way to an emphasis on health-related fitness. Using appropriately selected measures to collected fitness data in youth will

advance our understanding of how fitness among youth translates into better health. In *Fitness Measures and Health Outcomes in Youth*, the IOM assesses the relationship between youth fitness test items and health outcomes, recommends the best fitness test items, provides guidance for interpreting fitness scores, and provides an agenda for needed research. The report concludes that selected cardiorespiratory endurance, musculoskeletal fitness, and body composition measures should be in fitness surveys and in schools. Collecting fitness data nationally and in schools helps with setting and achieving fitness goals and priorities for public health at an individual and national level.
