Here is the story of

Florida's citrus wizard, an immigrant boy from China who became a brilliant man who blessed the world with his horticultural gift. In China, the expression "Gift of the Unicorn" means a blessing from the gods to the most fortunate of parents: an exceptionally bright son.

In 1860, a simple farming family was so blessed.

The Lues named their baby boy with the sparkling black eyes Gim Gong, which means "double brilliance." When he was only twelve years old, Lue Gim Gong left China to seek his fortune in America. The adventurous boy sailed across the Pacific to work in a shoe factory. The life of a Chinese immigrant was difficult, but the

magical unicorn would soon bless the boy again. The factory workers all received tutoring in English, and one teacher recognized Lue's unusual brilliance. Appointing herself the young boy's benefactor, Miss Fanny Burlingame took Lue under her sheltering wing. Lue eventually lived with the wealthy Burlingame family, tending their gardens in Massachusetts and their citrus groves in Florida. In the rural central Florida town of Deland, Lue revealed his extraordinary genius with plants. With the support of "Mother Fanny," Lue developed world-famous species of citrus, including a super-hardy sweet orange and a perfumed grapefruit the size of a soccer ball. He faced illness, lost love, business failure, and heart-

Since the first appearance of oranges at the Franciscan missions in the early 19th century, citrus agriculture has been an inextricable part of California's heritage. From the 1870s to the 1960s, oranges and lemons were dominant features of the Southern California landscape. The Washington navel orange, introduced by homesteader Eliza Tibbets at Riverside in the 1870s, precipitated the rise of a citrus belt stretching from Pasadena (in the San Gabriel Valley) to Redlands (in San Bernardino County). Valencia oranges dominated Orange County south of Los Angeles, while lemons thrived in coastal settlements such as Santa Paula. With the arrival of transcontinental railroads in the citrus heartland by the 1880s, Californians had access to markets across the United States. This was followed by the subsequent

establishment of an impressive central organization in the form of the California Fruit Growers Exchange, and oranges became the state's most lucrative crop. Observers did not exaggerate when they dubbed the southern portion of the Golden State an orange empire. *Covina Valley Citrus Industry* Timber Press
A guide to selecting and growing more than one hundred varieties of oranges, mandarins, lemons, limes, grapefruit, and kumquats, as well as exotic citrus, offering practical methods for making citrus part of outdoor living areas, and discussing alternative, chemical-free methods of pest control to ensure healthy as well as healthful fruit. *Citrus Fruits* University of Chicago Press
Bring the history of Florida to life through intriguing primary source documents! Lue Gim Gong: The Citrus Wizard discusses the orange growing techniques of the Citrus Wizard. Used in the classroom or at home, this nonfiction reader builds literacy and vocabulary for students. Based on state standards, this biography explores geography, history, and

other social studies topics, and includes important informational text features such as headings, an index, and a glossary.

The Citrus Industry, Volume IV Rowman & Littlefield

A complete guide to citrus cultivation explains how to grow a variety of citrus trees in all climates in the garden, on the terrace or deck, and on a balcony, with tips on overwintering, container gardening, greenhouses, profiles of a variety of citrus species--including oranges, lemons, limes, and more--and dozens of recipes for popular citrus foods.

Cooking with Citrus Fruit - A Selection of Recipes

Citrus Fruits UCANR Publications

Abstract: A reference for

citrus fruit growers, handlers, packing-house workers, exporters, food technology students, and citrus scientists presents a comprehensive treatise on citrus fruits that are destined for fresh markets. The 22 text chapters present authoritative reviews and guidelines prepared by experts in the various areas of citrus fruit science and technology. Topics include: citrus fruit anatomy, morphology, physiology, and maturation; maturity and grade standards; the effect of production practices on fresh fruit quality; growth regulators for improving postharvest quality; the characteristics of fresh fruit cultivars; production trends in the US and 7 other countries; fruit harvesting techniques; product transport to packing houses; the coordination of fresh fruit and processing outlets; degreening methods; systems for separating and grading freeze-damaged fruit; machinery for packing lines and its application; postharvest fruit diseases and their control; preharvest, maturity, and postharvest related disorders; methods of washing, waxing, and adding color

to fruits; packaging materials and unitization methods; regulations concerning fruit pests; allowable pesticide tolerances; characteristics of transportation of fruits to markets; citrus fruit storage; projections for world trade in citrus fruits; and energy usage, monitoring, and control in citrus fruit packing. References cited are appended to each of the chapters, and numerous figures and tabular data are presented throughout the text.

Gift of the Unicorn

National Academies Press
 Drawn by the California dream of golden sunshine and promise, many settlers came to the Covina Valley, where, after clearing the rocks, sagebrush, and cactus, they found rich alluvial soil. With the addition of water, everything grew in abundance. Citrus gradually became the best cash crop. This is the story of the men and women who made the citrus industry work in and around Covina, how they founded towns and eventually planted 25,000 acres of oranges, lemons, limes, and grapefruits. They endured droughts, floods, freezes, insect invasions, and unscrupulous buyers who

almost ruined them financially. Together they developed water resources and the first stockholder-owned citrus cooperative, and brought railroads, transforming the Covina Valley into a major citrus producing and processing center.

Citrus Fruits and Their Culture IICA

A visually stunning collection of 75 inventive, foolproof recipes that highlight the use of citrus. This sunny, citrus-infused collection showcases lemons, oranges, tangerines, grapefruits, and limes as well as out-of-the-ordinary kumquats, pomelos, Buddha's hand, and yuzu in everything from breakfast to dinner, drinks to dessert.

Seventy-five delicious, foolproof recipes include Tangerine Sticky Ribs, Burnt Sugar Meyer Lemon Tart, Citrus Crisps, and Havana Mojitos, while beautiful photography captures the essence of citrus on the plate. From miniature clementines to aromatic makrut limes, delicate Meyer lemons to ruby-hued grapefruits, the zesty, tangy flavors of Citrus will brighten up both your kitchen and your cooking.

Fresh Citrus Fruits

National Academies Press

Citrus greening, a disease that reduces yield, compromises the flavor, color, and size of citrus fruit and eventually kills the citrus tree, is now present in all 34 Floridian

citrus-producing counties. Caused by an insect-spread bacterial infection, the disease reduced citrus production in 2008 by several percent and continues to spread, threatening the existence of Florida's \$9.3 billion citrus industry. A successful citrus greening response will focus on earlier detection of diseased trees, so that these sources of new infections can be removed more quickly, and on new methods to control the insects that carry the bacteria. In the longerterm, technologies such as genomics could be used to develop new citrus strains that are resistant to both the bacteria and the insect.
