The purpose of this account of theory is to supplement lectures in developing the building blocks of sampling, as are likely to be needed in applied theory. Several contrasting approaches are used in showing how the theory may be developed. INTRODUCTORY THEORY FOR SAMPLE SURVEYS Probability sampling (a term due to Deming, [Deming]) is a sampling porcess that utilizes some form of random selection. In probability sampling, each unit is drawn with known probability, [Yamane, p3] or has a nonzero chance of being selected in the sample. [Raj, p10] Such samples are usually selected with the help of random numbers.
