**American History [2
volumes]** Oxford
University Press
The latest title in the

highly acclaimed Secret Projects series covers concepts developed by the US aircraft industry in the years immediately prior to and during World War 2. Embracing both fighter and bomber proposals from the American Aircraft industry this new volume includes medium, heavy and intercontinental bombers, attack and anti-submarine aircraft, both for the USAAF and US Navy. Particular emphasis is placed on Circular Proposals, -- a system of submitting designs

against requirements circulated around the industry by the Army Air Force in the 1930s and early 1940s. Incorporating information on the Hughes twin-engine studies which led to the spectacular XF-11, American Secret Projects also includes the Martin XB-33 four-engine heavy bomber developed at the same time as the Boeing, Chance Vought and Curtiss powered by a Wasp Major engine. Drawings and photographs of un-built designs are combined

with photographs of real aircraft to bring these American projects to life for the first time.

Axis Suicide Squads
Zenith Press

This book covers in detail the design and development of the Hawker Hunter jet fighter from its inception in the late 1940s. A list of UK squadrons and users is included and a large number of photos and 3-view drawings are available, including models of unbuilt designs.

Managing Sensitive Projects Millbrook Press

This is the comprehensive story of some of the most radical attack aircraft ever designed to operate from an aircraft carrier. These incredible projects were developed in 1948 to equip the USS United States, an immense 65,000-ton supercarrier that was to have been the core of the Navy's nascent strategic nuclear bombardment capability. Legendary aerospace companies such as Convair, Curtiss-Wright, Douglas, Fairchild, Lockheed, Martin, North American, Northrop, and

Republic would each submit proposals to the competitions. Varying widely in appearance, these studies ranged from Douglas's relatively small and modern Model 593 to their unconventional Model 1186 series, which was inspired by the X-3 Stiletto and featured a small parasite aircraft mounted atop a gigantic missile. Recently declassified, details of these fascinating projects are presented here for the first time. ILLUSTRATIONS 200 b/w images

During the Second World War both Germany and Japan developed several types of anti-aircraft and anti-ship missiles. Unfortunately for them, the Allies were technologically superior in electronic warfare by mid-1944, just in time to interfere the guidance systems of first generation. The Japanese thought to have found the tactic to stop the invasion fleets, with the ritual of the terminal dive bombing. The Germans

adapted their Sturmjäger squadrons to the Taran tactics learnt from the Soviets. Once the radio frequency war was lost, the Axis scientists tried to develop other control techniques. But the acoustic, electrostatic and infrared sensors, together with the TV guidance system, were not ready on time and broken cables made the wire guided bombs frequently fail. Both countries began to design ramming fighters and suicide bombers when the futile devastation of their cities

by the Allies bombers ensured that, when the time comes, there would not be lack of volunteer pilots. But this book is just about machines, depicting all known designs of all Axis suicide airplanes and panic fighters.

that our government has obtained mind-bending technology from extraterrestrials which led to the development of the most destructive weapons systems in history. Many of us doubt this possibility. However, we have irrefutable proofs that such programs exist, and are currently catalogued in secret files of the United States Air Force. This book reveals these secrets and refer us to the military bases where these weapons systems are stored. Weapons which escape

Secret Projects

Focusing on the U.S. military's development of special aircraft types during World War II, including many experimental aircraft and one-off secret projects, this book shows how U.S. aviation designs and weapons progressed under the pressure of global warfare. From the state-of-the-art aircraft at the beginning of the war, to the advances during the conflict, each special

type is covered in detail: armed photo reconnaissance, catapult launched seaplanes, naval floatplanes, autogyros, and special-operations armed drones. Often described as less glamorous than fighters and bombers, these special types of WWII combat aircraft offer a unique contribution to military aviation and aeronautical advancement.

Area 51's most important military aviation

developments are profiled in an illustrated format. When most of us think of Area 51, we think of aliens, UFOs, and controversial government cover-ups. It's easy to forget that, since the mid-1950s, the United States' famed extension of Edwards Air Force Base has served as a top-secret CIA testing ground for many of the most groundbreaking advancements in American military aviation technology. In *Area 51 - Black Jets*, author and military historian Bill

Yenne offers the first fully illustrated chronology of Area 51's most famous aircraft projects, including Lockheed's U-2 "Dragon Lady" and SR-71 "Blackbird" reconnaissance planes, drones ranging from the early Lockheed D-21 to the modern-day General Atomics MQ-1 Predator, and the famous F-117 Nighthawk stealth fighter produced by the Have Blue program during the 1970s. Each project is given its own fascinating chapter illuminating the aircraft's development at

this famed location. But beyond the aircraft themselves, Area 51 - Black Jets also covers a handful of the many classified experimental programs carried out at Area 51 over the years, such as Have Doughnut, Have Ferry, and Have Drill - secret undertakings that successfully reverse-engineered such enemy aircraft as the Russian MiG during the Cold War. Presented in beautiful hardcover format and illustrated with historic color and black-and-white photographs, diagrams,

and maps, this book reveals Area 51 for what it truly is: a clandestine area for the United States' most cutting-edge technological innovators in military aviation.

Top Secret Projects of World War II Wipf and Stock Publishers
This book completes the process of revising Tony Buttler's successful British Secret Projects titles, which have described the design and development of the UK's military aircraft since the mid-1930s. The original single volume has now been split into two separate titles: the already published British Secret Projects 3: Fighters 1935-1950 and this new book examining the design and development

of the British bomber from roughly the introduction of monoplane designs through to the start of the jet era. This split has allowed space for the inclusion of much new information and many additional photographs. Concentrating on designs that were never built, the projects and programs explored here start with designs that were prepared in the knowledge that war was approaching and go right through to the last generation of British piston-engine bombers

that appeared after the war had ended. As well as the 'heavies', this book also includes medium and light bombers, torpedo bombers for the Navy and anti-submarine types including flying boats. The book includes many three-view drawings plus numerous photographs of models or original artist's impressions to show how these unbuilt designs would have appeared, all ideal reference material for modelers in particular. The text includes full data available on the various types while additional

appendices summarize the projects and their covering contracts and specifications.

Since 1943, scores of remarkable aircraft have rolled out of the hangars occupied by Lockheed's top-secret Skunk Works program. This in-depth look at the famous research-and-design team's secret projects reveals the nuts and bolts behind aircraft ranging from the P-80 Shooting Star to today's X-35 Joint

Strike Fighter prototype. While the emphasis is on high-profile products like the U-2 Dragon Lady, SR-71 Blackbird, F-117 Nighthawk and F-22 Raptor, the book also examines Skunk Works projects that have yet to be covered in book form, including the Tier III Minus DarkStar unmanned air vehicle and the X-33 VentureStar orbiter. Photographs from Lockheed and private archives help explain how the Skunk Works have revolutionized military aviation from the jet age

to stealth and beyond.

This compelling volume tackles the topic of the classified files that government agencies choose not to release under the terms of the Freedom of Information Act. Many of these documents supposedly cannot be found or are Top Secret files that the agencies admit exist but that they have decided to keep the public from seeing. The reason for the

"missing" files is to stop the truth about some of the world's greatest conspiracies from ever becoming known, such as the Roswell UFO crash, the JFK assassination, Project MKUltra (the CIA's mind control operation), and a secret U.S. base on the moon.

Updated with New Information and Additional Patches They're on the shoulders of all military personnel: patches showing what a soldier's unit does. But what if

that's top secret? "A glimpse of [the Pentagon's] dark world through a revealing lens—patches—the kind worn on military uniforms.

. . . The book offers not only clues into the nature of the secret programs, but also a glimpse of zealous male bonding among the presumed elite of the military-industrial complex. The patches often feel like fraternity pranks gone ballistic."
—William Broad, *The New York Times* I COULD TELL YOU. . . is a bestselling collection of more than

seventy military patches representing secret government projects. Here author/photographer/investigator Trevor Paglen explores classified weapons projects and intelligence operations by scrutinizing their own imagery and jargon, disclosing new facts about important military units, which are here known by peculiar names (“Goat Suckers,” “Grim Reapers,” “Tastes Like Chicken”) and illustrated with occult symbols and ridiculous cartoons. The precisely

photographed patches—worn by military personnel working on classified missions, such as those at the legendary Area 51—reveal much about a strange and eerie world about which little was previously known. “A fresh approach to secret government.” —Steven Aftergood, The Federation of American Scientists “An impressive collection.” —Justin Rood, ABC News “A fascinating set of shoulder patches.” —Stephen Colbert, The Colbert Report “I was fascinated... [Paglen] has

assembled about 40 colorful patch insignia from secret, military ‘black’ programs that are hardly ever discussed in public. He has plenty of regalia from the real denizens of Area 51.” —Alex Beam, The Boston Globe

The America we love is under siege from the progressive movement. Progressives want to tear down traditional American values and banish our Constitution. Why would they want to do this when

Americans have historically enjoyed the most personal opportunity, the most personal freedom, the best standard of living and the best personal safety in the entire world? Traditional American values and governance under the existing Constitution do not allow progressives the ability to implement their utopian-based Marxist ideology, which ultimately gives them the power and autocratic control over American society they desire. One Americans

Opinion is a hard-hitting patriotic book that exposes successful and non-successful progressive efforts by the federal government and others in taking control of our country since the Obama administration has been in power. The resulting implications for American society are comprehensively analyzed. The areas examined include: government operation, regulation, and policy; foreign policy and national security; the mainstream news media; and the

political correctness movement overtaking our country. The in-depth analysis of this progressive activity will shock you. The book concludes by evaluating and predicting the future of America based upon the authors three years of research and his personal opinion.

10th Edition. TOP SECRET REPORT. Joint Weapons Systems Of The Extraterrestrials And The United States Crecy Publishing

The internet is the most effective weapon the

government has ever built. In this fascinating book, investigative reporter Yasha Levine uncovers the secret origins of the internet, tracing it back to a Pentagon counterinsurgency surveillance project. A visionary intelligence officer, William Godel, realized that the key to winning the war in Vietnam was not outgunning the enemy, but using new information technology to understand their motives and anticipate their

movements. This idea -- using computers to spy on people and groups perceived as a threat, both at home and abroad -- drove ARPA to develop the internet in the 1960s, and continues to be at the heart of the modern internet we all know and use today. As Levine shows, surveillance wasn't something that suddenly appeared on the internet; it was woven into the fabric of the technology. But this isn't just a story about the NSA or other domestic programs run by the government. As the

book spins forward in time, Levine examines the private surveillance business that powers tech-industry giants like Google, Facebook, and Amazon, revealing how these companies spy on their users for profit, all while doing double duty as military and intelligence contractors. Levine shows that the military and Silicon Valley are effectively inseparable: a military-digital complex that permeates everything connected to the internet, even coopting and

weaponizing the antigovernment privacy movement that sprang up in the wake of Edward Snowden. With deep research, skilled storytelling, and provocative arguments, *Surveillance Valley* will change the way you think about the news -- and the device on which you read it.

This is the latest among Midland's very successful 'Secret Projects' series. This, the second of three volumes covering Soviet

secret aviation projects, is devoted to post-World War II fighters and will include designs from famous bureaus such as Lavochkin, Mikoyan, Sukhoi, Yakovlev, Myasishchev, and Tupolev. The book covers early post-war fighters, competitions for the first-generation supersonic designs (MiG-21 and Su-7/-9), advanced designs of the 1960s which led to the MiG-2 and competitions to build the specifications which resulted in the MiG-29, Su-27, and MiG I-44. A

number of previously unpublished Yakovlev designs from the late 1950s and early 1960s form a separate chapter, followed by another covering Yakovlev's VSTOL work. The book also describes the competition between design bureaus for orders and shows the progress made in aircraft design behind the Iron Curtain. It will give both experts and enthusiasts the chance to compare this work to Western aircraft programs of the era.

This book charts the history of the US airlifter from its origins in World War II to today's transport giants. In doing so, it reveals and describes numerous designs which never saw the light of day, examining the thinking behind them and giving insights into why they did, or did not, succeed. In many ways, this untold story of aviation history reflects both the changing face of conflict and the exercise

of geo-political power; it has also had a major bearing on the development of civil aviation. The book has been made possible by the authors being given unprecedented access to major aerospace company archives, uncovering scores of design proposals which have never previously been revealed. It is profusely illustrated, much in full color, with artwork and three-view drawings extracted from manufacturers' archives and with photographs of original project models. As

well as describing how airlifters were progressively developed to meet ever-more demanding military transport requirements, the book looks at other roles for which they were adapted, from nuclear test-beds to Space Shuttle carriers. This previously untold story describes more than 200 unknown, or little known, designs, and contains more than 400 illustrations detailing some of the largest and most incredible aircraft ever conceived.

American Secret Projects 4: Bombers, Attack and Anti-Submarine Aircraft 1945-1974 Julian Messner
Until the events of September 11 and the anthrax attacks of 2001, biological weapons had never been a major public concern in the United

States. Today, the possibility of their use by terrorists against Western states looms large as an international security concern. In Biological Weapons, Jeanne Guillemin provides a highly accessible and compelling account of the circumstances under which scientists, soldiers, and statesmen were able to mobilize resources for extensive biological weapons programs and also analyzes why such weapons, targeted against civilians, were never used in a major

conflict. This book is essential for understanding the relevance of the historical restraints placed on the use of biological weapons for today's world. It serves as an excellent introduction to the problems biological weapons pose for contemporary policymakers and public officials, particularly in the United States. How can we best deter the use of such weapons? What are the resulting policies of the Department of Homeland Security? How

can we constrain proliferation? Jeanne Guillemin wisely points out that these are vitally important questions for all Americans to consider and investigate—all the more so because the development of these weapons has been carried out under a veil of

secrecy, with their frightening potential open to exploitation by the media and government. Public awareness through education can help calm fears in today's tension-filled climate and promote constructive political action to reduce the risks

of a biological weapons catastrophe. Biological Weapons is required reading for every concerned citizen, government policymaker, public health official, and national security analyst who wants to understand this complex and timely issue.
