Now an Apple TV+ documentary, Lincoln's Dilemma. One of the Wall Street Journal's Ten Best Books of the Year | A Washington Post Notable Book | A Christian Science Monitor and Kirkus Reviews Best Book of 2020 Winner of the Gilder Lehrman Abraham Lincoln Prize and the Abraham Lincoln Institute Book Award "A marvelous cultural biography that captures Lincoln in all his historical fullness. . . . using popular culture in this way, to fill out the context surrounding Lincoln, is what makes Mr. Reynolds's biography so different and so compelling . . . Where did the sympathy and compassion expressed in [Lincoln's] Second Inaugural—"With malice toward none; with charity for all"—come from? This big, wonderful book provides the richest cultural context to explain that, and everything else, about Lincoln." —Gordon Wood, Wall Street Journal From one of the great historians of nineteenth-century America, a revelatory and enthralling new biography of Lincoln, many years in the making, that brings him to life within his turbulent age David S. Reynolds, author of the Bancroft Prize-winning cultural biography of Walt Whitman and many other iconic works of nineteenth century American history, understands the currents in which Abraham Lincoln swam as well as anyone alive. His magisterial biography Abe is the product of full-body immersion into the riotous tumult of American life in the decades before the Civil War. It was a country growing up and being pulled apart at the same time, with a democratic popular culture that reflected the country's contradictions. Lincoln's lineage was considered auspicious by Emerson, Whitman, and others who prophesied that a new man from the West would emerge to balance North and South. From New England Puritan stock on his father's side and Virginia Cavalier gentry on his mother's, Lincoln was linked by blood to the central conflict of the age. And an enduring theme of his life, Reynolds shows, was his genius for striking a balance between opposing forces. Lacking formal schooling but with an unquenchable thirst for self-improvement, Lincoln had a talent for wrestling and bawdy jokes that made him popular with his peers, even as his appetite for poetry and prodigious gifts for memorization set him apart from them through his childhood, his years as a lawyer, and his entrance into politics. No one can transcend the limitations of their time, and Lincoln was no exception. But what emerges from Reynolds's masterful reckoning is a man who at each stage in his life managed to arrive at a broader view of things than all but his most enlightened peers. As a politician, he moved too slowly for some and too swiftly for many, but he always pushed toward justice while keeping the whole nation in mind. Abe culminates, of

course, in the Civil War, the defining test of Lincoln and his beloved country. Reynolds shows us the extraordinary range of cultural knowledge Lincoln drew from as he shaped a vision of true union, transforming, in Martin Luther King Jr.'s words, "the jangling discords of our nation into a beautiful symphony of brotherhood." Abraham Lincoln did not come out of nowhere. But if he was shaped by his times, he also managed at his life's fateful hour to shape them to an extent few could have foreseen. Ultimately, this is the great drama that astonishes us still, and that Abe brings to fresh and vivid life. The measure of that life will always be part of our American education.

A beginner's guide and a bible for one of the greatest social innovations of modern times: the discipline of management. Whether you're new to the field or a seasoned executive, this book will give you a firm grasp on what it takes to make an organization perform. It presents the basic principles of management simply, but not simplistically. Why did an eBay succeed where a Webvan did not? Why do you need both a business model and a strategy? Why is it impossible to manage without the right performance measures, and do yours pass the test? What Management Is is both a beginner's guide and a bible for one of the greatest social innovations of modern times: the discipline of management. Joan Magretta, a former top editor at the Harvard Business Review, distills the wisdom of a bewildering sea of books and articles into one simple, clear volume, explaining both the logic of successful organizations and how that logic is embodied in practice. Magretta makes rich use of examples—contemporary and historical—to bring to life management's High Concepts: value creation, business models, competitive strategy, and organizational design. She devotes equal attention to the often unwritten rules of execution that characterize the best-performing organizations. Throughout she shows how the principles of management that work in for-profit businesses can—and must—be applied to nonprofits as well. Most management books preach a single formula or a single fad. This one roams knowledgeably over the best that has been thought and written with a practical eye for what matters in real organizations. Not since Peter Drucker's great work of the 1950s and 1960s has there been a comparable effort to present the work of management as a coherent whole, to take stock of the current state of play, and to write about it thoughtfully for readers of all backgrounds. Newcomers will find the basics demystified. More experienced readers will recognize a store of useful wisdom and a framework for improving their own performance. This is the big-picture management book for our times. It defines a common standard of managerial literacy that will help all of us lead more productive lives, whether we aspire to be managers or not.

Niccolò Machiavelli famously wrote, "There is nothing more difficult to take in hand, more perilous to conduct, or more uncertain in its success than to take the lead in the introduction of a new order of things." That's what this book is about--innovation far more audacious than a new way to find a restaurant or a smart phone you can wear on your wrist. Harvard professor Amy Edmondson and journalist Susan Salter Reynolds explore how to bring into being systems that transform human experience and make the world more livable and sustainable. This demands "big teaming": intense collaboration across professions and industries that may have completely different mindsets and even be antagonistic to each other. To do this successfully requires practicing new forms of leadership that combine an expansive vision with incremental action--not an easy balance. To reveal how pioneers build the future, Edmondson and Reynolds tell the story of Living PlanIT, an award-winning "smart city" start-up with a breathtakingly ambitious goal: building a showcase high-tech city from scratch to pilot its software. This meant a joint effort spanning a truly disparate group of software entrepreneurs, real estate developers, city government officials, architects, construction companies, and technology corporations. We get to know Living PlanIT's leaders and follow them and their partners through cycles of hope, exhaustion, disillusionment, pragmatism, and renewal. There are powerful lessons here for anyone, in any industry, seeking to transform the world.

Why the United States lags behind other industrialized countries in sharing the benefits of innovation with workers and how we can remedy the problem. The United States has too many low-quality, low-wage jobs. Every country has its share, but those in the United States are especially poorly paid and often without

benefits. Meanwhile, overall productivity increases steadily and new technology has transformed large parts of the economy, enhancing the skills and paychecks of higher paid knowledge workers. What's wrong with this picture? Why have so many workers benefited so little from decades of growth? The *Work of the Future* shows that technology is neither the problem nor the solution. We can build better jobs if we create institutions that leverage technological innovation and also support workers through long cycles of technological transformation. Building on findings from the multiyear MIT Task Force on the *Work of the Future*, the book argues that we must foster institutional innovations that complement technological change. Skills programs that emphasize work-based and hybrid learning (in person and online), for example, empower workers to become and remain productive in a continuously evolving workplace. Industries fueled by new technology that augments workers can supply good jobs, and federal investment in R&D can help make these industries worker-friendly. We must act to ensure that the labor market of the future offers benefits, opportunity, and a measure of economic security to all.
