Guidelines for the Care and Use of Mammals in Neuroscience and Behavioral Research W. W. Norton & Company

A volume in International Review of History Education Series Editor Peter Lee, Rosalyn Ashby, Stuart Foster As educators in the United States and Europe develop national history standards for K-12 students, the question of what to do with national history canons is a subject of

growing concern. Should national canons still be the foundation for the teaching of history? Do national canons develop citizenship or should they be modified to accommodate the new realities of globalization? Or should they even be discarded outright? These questions become blurred by the debates over preserving national heritages, by so-called 'history wars' or 'culture wars,' and by debates over which pedagogical frameworks to use. These canon and pedagogical debates often overlap, creating even more confusion. A misconceived "skills vs. content" debate often results. Teaching students to think

chronologically and historically is not the same as teaching a national heritage or a cosmopolitan outlook. But what exactly is the difference? Policy-makers and opinion leaders often confuse the pedagogical desirability of using a 'framework' for studying history with their own efforts to reaffirm the centrality of national identity rooted in a vision of their nation's history as a way of inculcating citizenship and patriotism. These are the issues discussed in this volume." Today's students are citizens of the world and must be taught to think in global, supranational terms. At the same time, the traditionalists have a point when they argue that the ideal of the

nation-state is the cultural glue that has traditionally held society together, and that social cohesion depends on creating and inculcating a common national culture in the schools. From an educational perspective, the problem is how to teach chronological thinking at all. How are we to reconcile the social, political and intellectual realities of a globalizing world with the continuing need for individuals to function locally as citizens of a nation-state, who share a common past, a common culture, and a common political destiny? Is it a duty of history education to create a frame of reference, and if so, what kind of frame of reference should this be? How does frame-of-reference knowledge relate to canonical knowledge and the body of knowledge of history as a whole?

This text offers medical students a case-based approach to learning the mechanisms of renal disease. Each chapter covers a disease, beginning with a patient case and followed by a discussion of the pathophysiology of the disease. Issues of differential diagnosis and therapy are linked to pathophysiologic mechanisms. Short questions interspersed throughout the text require students to apply their knowledge. Detailed answers to the questions are included. New to this edition: Full-color artwork and design New color photomicrographs of clinical conditions Additional end-of-chapter summaries Up-to-date information based on new medical findings

Discipline-Specific Writing provides an introduction and guide to the teaching of this topic for students and trainee teachers. This book highlights the importance of discipline-specific writing as a critical area of competence for students, and covers both the theory and practice of teaching this crucial topic. With chapters

from practitioners and researchers working across a wide range of contexts around the world, Discipline-Specific Writing: Explores teaching strategies in a variety of specific areas including science and technology, social science and business; Discusses curriculum development, course design and assessment, providing a framework for the reader; Analyses the teaching of language features including grammar and vocabulary for academic writing; Demonstrates the use of genre analysis, annotated bibliographies and corpora as tools for teaching; Provides practical suggestions for use in the classroom, questions for discussion and additional activities with each chapter. Discipline-Specific Writing is key reading for students taking courses in English for Specific Purposes, Applied Linguistics, TESOL, TEFL and CELTA.

Bioavailability refers to the extent to which humans and ecological receptors are exposed to contaminants in soil or sediment. The concept of bioavailability has recently piqued the interest of the

hazardous waste industry as an important consideration in deciding how much waste to clean up. The rationale is that if contaminants in soil and sediment are not bioavailable, then more contaminant mass can be left in place without creating additional risk. A new NRC report notes that the potential for the consideration of bioavailability to influence decision-making is greatest where certain chemical, environmental, and regulatory factors align. The current use of bioavailability in risk assessment and hazardous waste cleanup regulations is demystified, and acceptable tools and models for bioavailability assessment are discussed and ranked according to seven criteria. Finally, the intimate link between bioavailability and bioremediation is explored. The report concludes with suggestions for moving bioavailability forward in the regulatory arena for both soil and sediment cleanup.

Expanding on the National Research Council's Guide for the Care and Use of Laboratory Animals, this book deals specifically with mammals in neuroscience and behavioral research laboratories. It offers flexible guidelines for the care of these animals, and guidance on adapting these guidelines to various situations without hindering the research process. Guidelines for the Care and Use of

Mammals in Neuroscience and Behavioral Research offers a more in-depth treatment of concerns specific to these disciplines than any previous guide on animal care and use. It treats on such important subjects as: The important role that the researcher and veterinarian play in developing animal protocols. Methods for assessing and ensuring an animal's well-being. General animal-care elements as they apply to neuroscience and behavioral research, and common animal welfare challenges this research can pose. The use of professional judgment and careful interpretation of regulations and guidelines to develop performance standards ensuring animal well-being and high-quality research. Guidelines for the Care and Use of Mammals in Neuroscience and Behavioral Research treats the development and evaluation of animal-use protocols as a decision-making process, not just a decision. To this end, it presents the most current, in-depth information about the best practices for animal care and use, as they pertain to the intricacies of neuroscience and behavioral research.

In the last decades, several in vitro and in vivo studies have revealed the existence of a very complex network between the neuroendocrine and immune system. Important molecular mechanisms underlying these interactions, in both physiological and pathological conditions, have also been described. Indeed, hormones play a pivotal role in the development and functional regulation of the immune system – both innate and acquired responses. Immune system cells present specific hormone receptors and themselves produce some hormones, thus influencing hormone secretion. More recently, the modulation of hormone secretion has been attempted for treating associated autoimmune disorders, further supporting the strong interplay between the endocrine and immune system. Distinguished experts, who have published extensively in their fields, have contributed comprehensive chapters to this volume. The focus is on the various aspects of endocrine-neuro-immune connections, providing an updated panorama - from basics to clinical applications - of current knowledge and still debated issues.

Psychoneuroendocrinoimmunology and the Science of Integrated Medical Treatment. The Manual World Scientific 4e de couverture: Responding to the challenges from the worlds they study and reflecting critically on their own practice, anthropologists have recently devoted new attention to ethics and morality. This masterclass brings together four of the most eminent scholars working in this field--Michael Lambek, Veena Das, Didier Fassin, and Webb Keane--to discuss, in a lecture format, the way in which anthropology faces contemporary ethical issues and moral problems. Rather than treating ethics as an object or as an isolable domain in moral theory, the authors are interested in grasping how the ethical and the moral emerge from social actions and interactions, how they are related to historical contexts and cultural settings, how they are transformed through their confrontation with the political, and how they are, ultimately, an integral part of life. Contrasting in their perspectives and methods, but developing a lively conversation, this masterclass provides four distinct voices to compose what will be an essential guide for an

anthropology of the ethical and the moral in the twenty-first century.

Endocrinology, and diabetes care in particular, is a dynamic field where clinicians must translate new evidence into clinical practice at a rapid pace. Designed in an engaging, case-based format, *Endocrinology and Diabetes: A Problem Oriented Approach* offers a wide range of thought-provoking case studies that reflect contemporary, challenging, hands-on clinical care. Further, by providing a list of specific clinical problems, this format offers the reader a more convenient and pointed way to solve precise clinical problems in a timely manner. Developed by a renowned, international group of experts, this comprehensive title covers the most common clinical problems in endocrinology and diabetes and should be of great interest to endocrinologists, diabetologists, internal medicine physicians, family physicians, fellows, and residents.

Archaeological practice is currently shifting in response to feminist, indigenous, activist, community-based, and anarchic critiques of how archaeology is practiced and how science is used to interpret the past lives of people. Inspired by the calls for a different way of doing archaeology, this volume presents a case here for a heart-centered archaeological practice. Heart-centered practice emerged in care-based disciplines, such as nursing and various forms of therapy, as a way to recognize the importance of caring for those on whom we work, and as an avenue to explore how our interactions with others impacts our own emotions and heart. Archaeologists are disciplined to separate mind and heart, a division which harkens back to the origins of western thought. The dualism between the mental and the physical is fundamental to the concept that humans can objectively study the world without being immersed in it. Scientific approaches to understanding the world assume there is an objective world

to be studied and that humans must remove themselves from that world in order to find the truth. An archaeology of the heart rejects this dualism; rather, we see mind, body, heart, and spirit as inextricable. An archaeology of the heart provides a new space for thinking through an integrated, responsible, and grounded archaeology, where there is care for the living and the dead, acknowledges the need to build responsible relationships with communities, and with the archaeological record, and emphasize the role of rigor in how work and research is conducted. The contributions bring together archaeological practitioners from across the globe in different contexts to explore how heart-centered practice can impact archaeological theory, methodology, and research throughout the discipline.

It has been known for over 40 years that GH-deficient-children benefit from replacement with the hormone. But GH, essential for longitudinal growth, also plays a role after completion of final height. With the introduction of biosynthetic human GH 20 years ago, the

use of GH was no longer restricted to severe growth retardation in hypopituitary children. This book will take the reader behind the myths of GH and into the real world of clinical endocrinology. The contributions stem from recognized clinicians and scientists who have been working in the field for decades. The contents encompass traditional end points of GH therapy such as body composition, bone biology and physical performance. Attention is also devoted to diagnostic aspects and side effects. Additional features range from clinical epidemiology to quality of life, and novel areas such as the impact of traumatic brain injury on pituitary function are also covered. The present volume of *Frontiers of Hormone Research* is essential reading for health care professionals interested in clinical endocrinology and GH.

This is a book about using the best evidence to inform treatment decisions for people with cancer. It is written by oncologists for oncologists, using examples throughout to illustrate key points. The book starts off with a "toolbox" section, written in a way which will help those relatively new to the principles of evidence-based oncology to understand the key issues, and equip them with the basics of how to tell a good study from a bad one. The majority of the book then deals with an evidence-based summary of the common and important cancers in a structured and easy to read format around common patient scenarios and frequently asked questions. Whilst most of the evidence is based on randomised controlled trials, other studies

are cited where appropriate eg when discussing adverse events. The unique accompanying book website will contain updates of new chapters and studies as they become available. Written by leading world figures in the evidence-based movement Includes free CD-ROM with PC eBook and sample PDA chapter Methodology of reviewing and appraising evidence discussed in the context of cancer management Clinical sections covering prevention and screening Chapters on treatment of the individual major cancers review the current best available evidence to most frequently asked questions Rigorously structured explicit searches, evidence of efficacy and harms, plus comment around clinical scenarios Free-access update website keeping the text current and live: www.evidbasedoncology.com
