Porting heads is an art and science. It takes a craftsman's touch to shape the surfaces of the head for the optimal flow characteristics and the best performance. Porting demands the right tools, skills, and application of knowledge. Few other engine builders have the same level of knowledge and skill porting engine heads as David Vizard. All the aspects of porting stock as well as aftermarket heads in aluminum and cast-iron constructions are covered. Vizard goes into great depth and detail on porting aftermarket heads. Starting with the basic techniques up to more advanced techniques, you are shown how to port iron and aluminum heads as well as benefits of hand and CNC porting. You are also shown how to build a high-quality flow bench at home so you can test your work and obtain professional results. Vizard shows how to optimize flow paths through the heads, past the valves, and into the combustion chamber. The book covers blending the bowls, a basic porting procedure, and also covers pocket porting, porting the intake runners, and many advanced procedures. These advanced procedures include unshrouding valves, porting a shortside turn from the floor of the port down toward the valve seat, and developing the ideal port area and angle. All of these changes combine to produce optimal flow velocity through the engine for maximum power.

The first prototype for the Tiger tank was set to be ready for Hitler's birthday on April 20, 1942. The Henschel Company, competing with Porsche, produced the superior model, and by August of that year the formidable Tiger--or Panzerkampfwagen VI Tiger Ausf. H.--was in full production. This book takes us behind the scenes with the Tiger tank, reviewing the full history, the design and mechanics, and the mixed record of this machine, which was designed to outgun its Russian counterparts. Military writer Michael Green offers a close-up account--accompanied by photographs, diagrams, and maps--of how the Tiger tank operated, how it was armed, and where it succeeded brilliantly, as well as where it failed miserably. His book fills a fascinating niche in the history of military technology, and of the impact of technology on history itself.

This book presents a systematic study of transboundary, regional and local water conflicts and resistance across several river basins in South Asia. Addressing hydro-socio-economic aspects in competing water sharing and transfer agreements, as well as conflicting regimes of legal plurality, property rights and policy implementation, it discusses themes such as rights over land and natural resources; resettlement of dam-displaced people; urban-rural conflicts over water allocation; peri-urbanisation, land use conflicts and water security; tradeoffs and constraints in restoration of ecological flows in rivers; resilience against water conflicts in a river basin; and irrigation projects and sustainability of water resources. Bringing together experts, professionals, lawyers, government and the civil society, the volume analyses water conflicts at local, regional and transboundary scales; reviews current debates with case studies; and outlines emerging challenges in water policy, law, governance and institutions in South Asia. It also offers alternative tools and frameworks of water sharing mechanisms, conflict resolution, dialogue, and models of cooperation and collaboration for key stakeholders

towards possible solutions for effective, equitable and strategic water management. This book will be useful to scholars and researchers of development studies, environment studies, water studies, public policy, political science, international relations, conflict resolution, political economy, economics, sociology and social anthropology, environmental law, governance and South Asian studies. It will also benefit practitioners, water policy thinktanks and associations, policymakers, diplomats and NGOs.
