JISEBI is an international, peer review, electronic, and open access journal. JISEBI is seeking an original and high-quality manuscript.

Information System Engineering is a multidisciplinary approach to all activities in the development and management of information system aiming to achieve organization goals. Business Intelligence (BI) focuses on techniques to transfer raw data into meaningful information for business analysis purposes, such as decision making, identification of new

opportunities, and the implementation of business strategy. The goal of BI is to achieve a sustainable competitive advantage for businesses. *RFID for Libraries* Insan Cendekia Mandiri Today's students want to practice the application of concepts. Penggunaan kuesioner atau angket sebagai alat survei tidak hanya digunakan oleh mahasiswa yang ingin menyelesaikan tugas akhir, skripsi, tesis, atau disertasi. Lebih dari itu, penggunaan kuesioner juga banyak dilakukan oleh berbagai perusahaan yang ingin mendata dan mengolah data kuesionernya untuk meningkatkan kualitas layanan perusahaan mereka.	Melihat fenomena tersebut, penggunaan SPSS untuk mengolah data kuesioner tidak hanya mendominasi dunia akademisi saja, ada banyak manfaat dan kegunaan lainnya. Oleh karena itu, buku ini hadir untuk memberikan panduan praktis bagaimana kita bisa mengolah data kuesioner secara runut dan sistematis mulai dari analisis	deskriptif, melakukan uji validitas dan reliabilitas, uji normalitas dan homogenitas, pengelompokan atau kategori data, hingga berbagai pengujian yang lebih kompleks, seperti analisis regresi dan analisis korelasi. Bahkan buku ini juga hadir dengan sebuah bab khusus yang mengulas tentang analisis jalur atau path analysis serta bab khusus mengenai

Advances over using bar codes on library materials, RFID tags are being touted as a way to radically redesign how library materials are handled. But it is expensive. The tags are vulnerable to wear and tear and the technology is not fully developed. It's unclear what sort of return on investment (ROI) it provides.

While it is common for libraries to now have information technology expertise within their organizations, RFID may appear unfamiliar. RFID for Libraries: A practical guide examines what RFID technology is and how it works. The book reviews the development of computer technology and its effects on library operations over the last couple of decades. Further

examination features the applications of RFID technology in libraries. An assessment of current implementations in libraries and the lessons learnt provides suggestions to overcome the issues faced. Concluding chapters look into the future to see what developments might be possible with RFID in libraries. Benefiting from the rich experience the author has gained during recent implementatio

information systems, librarians and LIS students are often propelled onto the front lines of interactions between library users and technology. But what do librarians need to know to best meet their patron's needs? What exactly are information systems and how do they work? Information expert Ratzan uses plain language, humor, and everyday examples like baseball and arithmetic to

make sense of information systems (computer hardware, software, databases, the Internet). He also explores their characteristics , uses, abuses, advantages, and shortcomings for your library. Fun exercises and appendixes are provided to illustrate key points in the book and measure understanding . You can be a technophobe and still learn about systems and subsystems to represent,

organize, retrieve, network, secure, conceal, measure, and manage information. This basic introduction addresses both theoretical and practical issues, including: What questions to ask technology vendors to meet your library's needs; When technology may not be the solution to a problem; Secrets **The influence of management**
