The purpose of The Transparency of Things is to look clearly and simply at the nature of experience, without any attempt to change it. A series of contemplations leads us gently but directly to see that our essential nature is neither a body nor a mind. It is the conscious Presence that is aware of this current experience. As such, it is nothing that can be experienced as an object, and yet it is undeniably present. However, these contemplations go much further than this. As we take our stand knowingly as this conscious Presence that we always already are, and reconsider the objects of the body, mind, and world, we find that they do not simply appear to this Presence; they appear within it. And further exploration reveals that they do not simply appear within this Presence but as this Presence. Finally, we are led to see that it is in fact this very Presence that takes the shape of our experience from moment to moment while always remaining only itself. We see that our experience is and has only ever been one seamless totality, with no separate entities, objects, or parts anywhere to be found.

<i>Kingdom of Nokia</i> Penguin Books India	
Kingdom of Nokia tells a fascinating story of corporatism in Finland. How did the mobile phone giant Nokia make the Finnish elite willing to serve the interests of the company? Nokia became a global player in mobile communications in the 1990s, and helped establish Anglo-Saxon capitalism in Finland. Through its success and strong lobbying, the company managed to capture the attention of Finnish politicians, civil servants, and journalists nationwide. With concrete detailed examples, Kingdom of Nokia illustrates how Nokia organised lavishing trips to journalists and paid direct campaign funding to politicians to establish its role at the core of Finnish decision-making. As a result, the company influenced important political decisions such as joining the European Union and adopting the euro, and further, Nokia even drafted its own law to serve its special interests. All this in a country considered one of the least corrupt in the world.

Documenting and describing the emerging “performative democracy,” the first new art form of the twenty-first century. Today political protest often takes the form of spontaneous, noninstitutional, mass action. Mass protests during the Arab Spring showed that established systems of power—in that case, the reciprocal support among Arab dictators and Western democracies—can be interrupted, at least for a short moment in history. These new activist movements often use online media to spread their message. Mass demonstrations from Tahrir Square in Cairo to Taksim Square in Istanbul show the power of networked communication to fuel “performative democracy”—at the center of which stands the global citizen. Art is emerging as a public space in which the individual can claim the promises of constitutional and state democracy. Activism may be the first new art form of the twenty-first century. global aCTIVISm (the capitalized letters form the Latin word civis, emphasizing the power of citizens) describes and documents politically inspired art—global art practices that draw attention to grievances and demand the transformation of existing conditions through actions, demonstrations, and performances in public space. Essays by leading thinkers—including Noam Chomsky, Antonio Negri, Peter Sloterdijk, and Slavoj Žižek—consider the	

emerging role of the citizen in the new performative democracy. The essays are followed by images of art objects, illustrations, documents, and other material (first shown in an exhibition at ZKM Center for Art and Media, Karlsruhe) as well as case studies by artists and activists. This project looks to improve first responder situational awareness using mobile computing techniques. The prototype system combines wireless communication, real-time location determination, digital imaging, and three-dimensional graphics. Responder locations are tracked in an outdoor environment via GPS and uploaded to a central server via GPRS or an 802.11 network. Responders can also wirelessly share digital images and text reports, both with other responders and with the incident commander. A pre-built three dimensional graphics model of the emergency scene is used to visualize responder and report locations. Responders have a choice of information end points, ranging from programmable cellular phones to tablet computers. The system also employs location-aware computing to make responders aware of particular hazards as they approach them. The prototype was developed in conjunction with the NASA Ames Disaster Assistance and Rescue Team and has undergone field testing during responder exercises at NASA Ames.
