Care of the Well Newborn
is a unique text that

focuses on care of the term newborn for the first month of life. Written by distinguished experts in the field, it teaches students and professionals how and what to assess in the care of the non-verbal newborn, while also providing criteria for recognizing deviations from normal and strategies for managing complications that arise. The first text of its kind, it provides easily accessible information on evidence-based neonatal care that follows current guidelines,

standards, and recommendations. Also explored are physiology and pathophysiology, data collection, differential diagnosis, cultural considerations, and parental education. An ideal resource for both students and professionals, each chapter includes multiple choice questions, case studies, and activities to facilitate critical thinking and learning. *Maternal-newborn Nursing Care* F.A. Davis
An outline-format, inexpensive, paperback

review book for undergraduate nursing students that can be used for course or subject review or NCLEX preparation. Contains NCLEX-style review questions in each chapter, a comprehensive exam, and additional questions on a back-of-book CD-ROM. This edition includes new NCLEX-style innovative item questions. Cloherty and Stark's Manual of Neonatal Care Saunders

pregnancies, labor and delivery risk, and much more.

Maternal Newborn Nursing Care Plans

Lippincott Williams & Wilkins

The evaluation of reproductive, maternal, newborn, and child health (RMNCH) by the Disease Control Priorities, Third Edition (DCP3) focuses on maternal conditions, childhood illness, and malnutrition. Specifically, the chapters address acute illness and undernutrition in children, principally under age 5. It

also covers maternal mortality, morbidity, stillbirth, and influences to pregnancy and pre-pregnancy. Volume 3 focuses on developments since the publication of DCP2 and will also include the transition to older childhood, in particular, the overlap and commonality with the child development volume. The DCP3 evaluation of these conditions produced three key findings: 1. There is significant difficulty in measuring the burden of key conditions such as

unintended pregnancy, unsafe abortion, nonsexually transmitted infections, infertility, and violence against women. 2. Investments in the continuum of care can have significant returns for improved and equitable access, health, poverty, and health systems. 3. There is a large difference in how RMNCH conditions affect different income groups; investments in RMNCH can lessen the disparity in terms of both health and financial risk.
