Publication of this text at this time, when the

Army has been at war for almost a decade, has almost completed restructuring of its operating force, and is addressing the structure of the generating force, as well as completing formidable base closure and restationing actions, gives credence to the enduring truth that in order to be successful the Army must sustain and improve itself while it is fully committed to the Nation's

bidding. The systems and processes documented and explained in this work are designed to do just that. This text was prepared under the direction of the faculty of the Department of Command, Leadership, and Management. It is intended to be used in an academic environment during the study of the systems and processes used to develop and sustain trained and ready combat

The mission of the United States Army is to fight and win our nation's wars by providing prompt, sustained land

dominance across the full range of military operations and spectrum of conflict in support of combatant commanders. Accomplishing this mission rests on the ability of the Army to equip and move its forces to the battle and sustain them while they are engaged. Logistics provides the backbone for Army combat operations. Without fuel, ammunition, rations, and other supplies, the Army would grind to

a halt. The U.S. military must be prepared to fight anywhere on the globe and, in an era of coalition warfare, to logistically support its allies. While aircraft can move large amounts of supplies, the vast majority must be carried on ocean going vessels and unloaded at ports that may be at a great distance from the battlefield. As the wars in Afghanistan and Iraq have shown, the costs of

convoying vast quantities of supplies is tallied not only in economic terms but also in terms of lives lost in the movement of the materiel. As the ability of potential enemies to interdict movement to the battlefield and interdict movements in the battlespace increases, the challenge of logistics grows even larger. No matter how the nature of battle develops, logistics will

remain a key factor. Force Multiplying Technologies for Logistics Support to Military Operations explores Army logistics in a global, complex environment that includes the increasing use of antiaccess and area-denial tactics and technologies by potential adversaries. This report describes new technologies and systems that would reduce the demand for logistics and meet the

demand at the point of need, make maintenance more efficient, improve inter- and intratheater mobility, and improve near-real-time, in-transit visibility. Force Multiplying Technologies also explores options for the Army to operate with the other services and improve its support of Special Operations Forces. This report provides a logistics-centric research and

<p>development investment strategy and illustrative examples of how improved logistics could look in the future.</p> <p><u>Preparation and Submission of Budget Estimates</u></p> <p>DODI 1400.25 Civilian Personnel Management - This book is Volume 1 of 4.  This text explains and synthesizes the functioning and relationships of numerous Defense, Joint, and Army organizations, systems, and

processes involved in the development and sustainment of trained and ready forces for the Combatant Commanders. It is designed to be used by the faculty and students at the U.S. Army War College (as well as other training and educational institutions) as they improve their knowledge and understanding of "How the Army Runs." We are proud of the value that senior commanders

and staffs place in this text and are pleased to continue to provide this reference. *Current Glossary* Goals and objectives; Five themes; Three types of information; Network development; Network options; Technology choices; Software and hardware; Organization and management; Demonstration sites; Major elements of the strategy. **Semiannual Report** Maritime

Supply Chains breaks the maritime chain into components, consistently relating them to the overall integrated supply chain. The book not only analyzes and provides solutions to frequently encountered problems and key operational issues, it also applies cutting-edge scientific techniques on the maritime supply chain. Sections consider shipping, ports and terminals, hinterland and

<p>the issues that intersect different parts of the chain. Readers will find discussions of the various actors at play and how they relate to the overall function of the supply chain. Finally, the book offers solutions to the most pressing problems, thus providing a unique, well-balanced account. When a new standard is released, somebody has to print it, punch holes and put it in a 3-ring binder. While this is not a big deal for a 5 or 10-page document, many DoD documents are over 400 pages and printing a

large document is a time-consuming effort. So, a person that's paid \$25 an hour is spending hours simply printing out the tools needed to do the job.
