CARMELO TRINITY

Integrating Agriculture, Conservation and Ecotourism: Examples from the Field Springer

This volume discusses the complex relationship between Protected Areas and tourism and their impact on community livelihoods in a range of countries in Southern Africa. Protected areas and tourism have an enduring and symbiotic relationship. While protected areas offer a desirable setting for tourism products, tourism provides revenue that can contribute to conservation efforts. This can bring benefits to local communities, but it can also have a negative impact, with the establishment of protected areas leading to the eviction of local communities from their original places of residence, while also preventing them from accessing the natural resources they once enjoyed.

Taking a multi-disciplinary approach, this book addresses the opportunities and challenges faced by communities and other stakeholders as they endeavour to achieve their conservation goals and work towards improving community livelihoods. Case studies from Botswana, Malawi, Namibia, South Africa, Tanzania, Zambia and Zimbabwe address key issues such as human-wildlife conflicts, ecotourism, wildlife-based tourism, landscape governance, wildlife crop-raiding and trophy hunting, including the high-profile case of Cecil the lion. Chapters highlight both the achievements and positive outcomes of protected areas, but also the challenges faced and their impact on how protected areas are viewed and also conservation priorities more generally. The volume gives these issues affecting protected areas, local communities, managers and international conservation efforts centre stage in order inform policy and improve practice going forward. This book will be of great interest to students and scholars of conservation, natural resource management, tourism, sustainable development and African studies, as well as professionals and policymakers involved in conservation policy.

Ecotourism and Conservation in the Americas CABI

Tourism is the world's largest industry, and ecotourism is rapidly emerging as its fastest growing segment. As interest in nature travel increases, so does concern for conservation of the environment and the well-being of local peoples and cultures. Appalachia seems an ideal destination for ecotourists, with its rugged mountains, uniquely diverse forests, wild rivers, and lively arts culture. And ecotourism promises much for the region: protecting the environment while bringing income to

disadvantaged communities. But can these promises be kept? Ecotourism in Appalachia examines both the potential and the threats that tourism holds for Central Appalachia. The authors draw lessons from destinations that have suffered from the "tourist trap syndrome," including Nepal and Hawaii. They conclude that only carefully regulated and locally controlled tourism can play a positive role in Appalachia's economic development.

Indigenous Ecotourism Routledge

'Ecotourism' outlines the phenomenon of Ecotourism; its sources and its development as a concept. Conservation issues are now at the forefront of public opinion - Nature is calling us to its wilds and we are responding in droves. The decline of natural rainforests, loss of endangered species, global warming and land degradation have galvanised public support for conservation. The interest in Ecotourism and nature-orientated tourism has coincided with this worldwide concern Using relevant case studies, 'Ecotourism' examines the potential positive social and environmental benefits of Ecotourism and is ideal for both students of tourism and practitioners within the tourism industry. 'Ecotourism' will also be of interest to environmental groups, land managers, academics and planners. Indeed anyone interested in examining what Ecotourism is and how it may hold the potential to solve or at least mitigate several of the great problems of our age. An example being arguably the greatest of these dilemmas: to satisfy human needs for employment, income and economic development, while at the same time protecting the environment. Stephen Wearing and John Neil are both lecturers at the School of Tourism Studies, University of Technology, Sydney, Australia.

Ecotourism Routledge

Focusing on an array of economic, social and ecological inconsistencies that continue to plague ecotourism in theory and practice, this book examines ecotourism in reference to other related forms of tourism, impacts, conservation, sustainability, education and interpretation, policy and governance, and the ethical imperative of ecotourism as these apply to the world's greenest form of tourism. This revised edition includes: new information on the magnitude of the tourism industry, nature-based tourism and the pros and cons of mass ecotourism revised chapters on development, economics, marketing, policy, ecotourism in practice and biodiversity conservation a section on governance models, ecotourism programmes, operators and guides, interpretation, certification, and ecolodge design a discussion of ecotourism as an ethical or responsible form of tourism

approximately 300 new references. It includes case studies and considers the perspectives of many adjacent fields, including geography, economics, business, philosophy, biology, and environmental studies.

Nature-based Tourism and Conservation Routledge

Political ecology explicitly addresses the relations between the social and the natural, arguing that social and environmental conditions are deeply and inextricably linked. Its emphasis on the material state of nature as the outcome of political processes, as well as the construction and understanding of nature itself as political is greatly relevant to tourism. Very few tourism scholars have used political ecology as a lens to examine tourism-centric natural resource management issues. This book brings together experts in the field, with a foreword from Piers Blaikie, to provide a global exploration of the application of political ecology to tourism. It addresses the underlying issues of power, ownership, and policies that determine the ways in which tourism development decisions are made and implemented. Furthermore, contributions document the complex array of relationships between tourism stakeholders, including indigenous communities, and multiple scales of potential conflicts and compromises. This groundbreaking book covers 15 contributions organized around four cross-cutting themes of communities and livelihoods; class, representation, and power; dispossession and displacement; and, environmental justice and community empowerment. This book will be of great interest to students and scholars in tourism, geography, anthropology, sociology, environmental studies, and natural resources management.

Ecotourism in Appalachia Springer

In the face of rapid industrialisation in the last few decades, the tourism economy has blossomed into a major industry with positive impacts such as economic growth, infrastructure development, employment, and income generation. However, tourism brings negative environmental effects such as degradation of landscapes and habitats, increased vulnerability of avifauna and wildlife, and pollution leading to the decline of species. Environmental Impacts of Tourism in Developing Nations is a pivotal reference source that explores some of the critical challenges faced in the tourism economy particularly with regard to the impacts on the environment in developing nations. It also explores the impact tourism plays in the biophysical environment such as the issue of climate change. While highlighting topics such as environmental justice, ecosystems, and ecotourism, this book is ideally designed for academicians, policymakers, environmentalists, tourism professionals, and graduate-level students seeking current research on the environmental and economic impacts of tourism.

Ecotourism as a Conservation Instrument? kassel university press GmbH

This study proceeds on Campbell's (2002) argument that in today's biodiversity conservation discourse, the traditional exclusionary conservation narrative co-exists with a counter-narrative on sustainable use through ecotourism. Based on the perception of a global biodiversity crisis the conservation landscape has seen the resurgence of the traditional conservation discourse, which reinforces the argument against social objectives of conservation and for an exclusionary conservation approach drawing on the notion of wilderness. Local resource use practices are restricted or prohibited, while ecotourism is considered the most sustainable option. However, as a proposed alternative livelihood strategy for local residents, ecotourism often fails to deliver on

claims that it significantly benefits local development, while it may be more conducive to furthering ecological imperatives. Based on an analysis of the management of Komodo National Park, Indonesia, and the development of communities within the Park, this study argues that ecotourism may only be a politically attractive slogan that provides conservation agencies with the political and economic justification for an exclusionary protected area management approach. Instead of taking into account economic, social and cultural concerns of local residents, a conservation regime that adopts ecotourism as a conservation strategy may ultimately leave local people struggling to meet their present needs.

Ecotourism CABI

With global wildlife populations and biodiversity riches in peril, it is obvious that innovative methods of addressing our planet's environmental problems are needed. But is "the market" the answer? Nature™ Inc. brings together cutting-edge research by respected scholars from around the world to analyze how "neoliberal conservation" is reshaping human-nature relations.

Ecotourism and Conservation in the Americas Routledge

Factors that strengthen community support for ecotourism and conservation, while being aware of traditional values and lifestyles must be understood for ecotourism to function as it should. This study explored attitudes of local people living adjacent to and co-managing a national park in Belize and examined how ecotourism, community participation and benefits from ecotourism, possible changes to cultural and traditional ways of life due to ecotourism, and the prospect of further development (more community and country infrastructure as a response to increased tourism) influenced these attitudes. A series of 49 household surveys investigated these attitudes, using a semi-structured questionnaire, in the village of Saint Margarets, Belize. Additionally, nine interviews with key informants and a general investigation into ecotourism, conservation and management in the national park were undertaken. Data were catalogued and by analyzed using Microsoft Excel. Wilcoxon Rank Sum tests were used to measure attitude differences between groups in the community; Likert tests were used to quantify attitudes, and Informal Content Analysis was used to analyze trends in answers to certain questions. The data suggested high levels of support for ecotourism development, desire for greater community participation, continued protection of the land and conservation efforts, and strong desires for more infrastructure development. However, there is little to no community participation and little understanding of how to become more involved. Of critical importance for the success of this project is the establishment of partnerships with other organizations, training for community members, and greater community involvement. Resident Attitudes Towards Ecotourism and Conservation in a Community Co-managed Protected Area Cengage Learning

'Ecotourism' outlines the phenomenon of Ecotourism; its sources and its development as a concept. Conservation issues are now at the forefront of public opinion - Nature is calling us to its wilds and we are responding in droves. The decline of natural rainforests, loss of endangered species, global warming and land degradation have galvanised public support for conservation. The Encyclopedia of Ecotourism CABI

Essay from the year 2008 in the subject Tourism - Miscellaneous, grade: 1.7, University of Brighton (School of Service Management), course: Ecotourism, language: English, abstract: The aim of this essay is to evaluate and critically discuss the ecotourism measures taken in Brazil. Due to the complexity of the topic and the size of the chosen country, the focus of this case study will lie on the national policy affecting ecotourism in Brazil, the involved stakeholders and their area of activity and some typical Brazilian examples of ecotourism planning/development projects in the Brazilian Amazon region.

Wildlife Tourism, Environmental Learning and Ethical Encounters Routledge

Issues In Agroecology – Present Status and Future Prospectus not only reviews aspects of ecology, but the ecology of sustainable food production systems, and related societal and cultural values. To provide effective communication regarding status and advances in this field, this series connects with many disciplines such as sociology, anthropology, environmental sciences, ethics, agriculture, economics, ecology, rural development, sustainability, policy and education, and integrations of these general themes so as to provide integrated points of view that will help lead to a more sustainable construction of values than conventional economics alone. Such designs are inherently complex and dynamic, and go beyond the individual farm to include landscapes, communities, and biogeographic regions by emphasizing their unique agricultural and ecological values, and their biological, societal, and cultural components and processes.

Ecotourism and Conservation CABI

What do wild animals mean to humans? Will they survive both rampant habitat loss and extinction caused by human encroachment and, as ecotourists, our enthusiasm for them? With ecotourism now the fastest growing segment of tourism, and encounters with wild animals - be it swimming with dolphins, going on safari or bird watching - ever more popular, these are critical questions. Yet until now little has been known about why people crave encounters with wild animals and the meaning for the ecotourism industry, conservation efforts and society at large. Facing the Wild is the first serious empirical examination of why people seek out animals in their natural environment, what the desire for this experience tells us about the meanings of animals, nature, authenticity and wilderness in contemporary industrialized societies, and whether visitors change their environmental perspectives and behaviour, as the custodians of wildlife parks would like them to. The book explores the contradictions and ambivalence that so many people experience in the presence of 'wild nature' - in loving it we may diminish it and in the act of wanting to see it we may destroy it. Ultimately the book makes a case for 'respectful stewardship' of a 'hybrid nature' and provides insight for both practitioners and ecotourists alike.

Political Ecology and Tourism GRIN Verlag

Drawing on case studies from Pacific Islands, Africa, Latin America and Southeast Asia, this book examines ecotourism enterprises controlled by indigenous people in tribal reserves or protected areas. It compares indigenous ecotourism in developed and developing countries and covers cultural ecotours, ecolodges, and bungalows, hunting and fishing tours, cultural attractions and other nature-based facilities or services.

Critical Issues in Ecotourism IGI Global

The Encyclopedia of Ecotourism provides an expert, state-of-the-art and comprehensive knowledge base of the rapidly growing global ecotourism sector. It is divided into eight major sections, and contains 41 chapters, individually authored by international researchers and practitioners in ecotourism. Each chapter combines theory and practice in a complementary way. The scope of the encyclopedia includes definitions and other contextual material, regional perspectives, venues, impacts, planning and management considerations, and issues associated with ecotourism businesses, research and training.

Ecotourism and Biodiversity Conservation Routledge

This book outlines the status quo of worldwide wildlife tourism and its impacts on planning, management, knowledge, awareness, behaviour and attitudes related to wildlife encounters. It sets out to fill the considerable gaps in our knowledge on wildlife tourism, applied ecology, and environmental education, providing comprehensive information on and an interdisciplinary approach to effective management in wildlife tourism. Examining the intricacies, challenges, and lessons learned in a meaningful and rewarding tourism niche, this interdisciplinary book comprehensively examines the major potentials and controversies in the wildlife tourism industry. Pursuing an insightful, provocative and hands-on approach, it primarily addresses two questions: 'Can we reconcile the needs of the wildlife tourism industry, biodiversity conservation, ecological learning and animal ethics issues?' and 'What is the Future of the Wildlife Tourism Industry?'. Though primarily intended as a research text, it also offers a valuable resource for a broad readership, which includes university and training students, researchers, scholars, tourism practitioners and professionals, planners and managers, as well as the staff of government agencies.

Ecotourism CABI

Annotation. The global tourism industry continues a trend of sustained growth, moving more people and generating domestic and foreign revenues, often at the expense of the social and ecological integrity of destination regions. As a result, tourism policy makers have been forced to consider a variety of new approaches to ensure that the environment, local people, tourists, and business remain unaffected by the negative impacts of the industry.

Ecotourism CABI

Volunteer tourism describes a field of tourism, in which travelers visit a destination and take part in projects in the local community. Projects are commonly nature-based, people-based or involve restoration of buildings and artifacts (e.g. restoration of a Buddhist temple in Mongolia).

Environmental Impacts of Tourism in Developing Nations Nova Science Publishers

Critical Issues in Ecotourism seeks to shake the current stagnant literature on the subject of ecotourism out of a state of complacency. Drawing upon emerging insights provided by pre-eminent

scholars in the field it identifies and comprehensively addresses current critical issues. Accessible to both academic and non-academic audiences, it provides the reader with the following: * A critical, direct and hard hitting analysis of the real issues that apply to the field of ecotourism *Contributions from prominent international scholars that address issues of relevance to a diverse and international readership * Dissemination of the scholarly works of social and natural science addressing this field * A collection of works by outstanding international scholars, in a comprehensively planned and integrated book Incorporating rigorous scientific insights in specialised fields of research, for example, identifying and protecting critical habitats where tourists engage with endangered species, Critical Issues in Ecotourism is an important and ground breaking contribution set to expose the increasingly mythologized field of ecotourism.

Ecotourism Earthscan

'This book tackles the two edge sword of non consumptive wildlife tourism: on net does it add to or detract from species conservation? The book does so with a treasure trove of original survey research on the supply and demand for wildlife tourism on both public and private lands from Antarctica to rainforests to marine wildlife. The economic analysis is one of the first to apply new behavioral economics to analyzing tourists' choices.' John Loomis, Colorado State University, US
'Does nature-based tourism help or hinder biodiversity conservation? The answer provided by this authoritative volume is that it depends on context and type of tourism and is no easy panacea. Indeed it can result in an under supply of nature conservation from an economic point of view. This book provides an excellent synthesis, supported by case studies, of the tourism conservation trade off problem, it will appeal to both academic and practitioner audiences.' R. Kerry Turner, CBE,

University of East Anglia, UK 'This book encapsulates a lifetime's scholarly work between the authors. It sets out the platform upon which nature-based tourism may be discussed and debated, which it then enriches by a series of case examples, mostly drawn from personal experience. In doing so it performs a valuable service to all interested in this field by capturing those detailed insights into nature-based tourism that are often only acquired by experience.' Stephen Wanhill, Editor, Tourism Economics 'In today's world, even nature seems to have to pay its own way. Nature-based Tourism and Conservation provides detailed real-life examples of how this is working in various parts of the world, from rainforests to Antarctica, and how the tradeoffs can best be measured. Clem Tisdell and Clevo Wilson provide a unique economic perspective to the various issues involved, providing practical illustrations of how others can incorporate the various ways of considering costs and benefits when deciding how to define the role nature-based tourism when planning conservation measures. This book will be useful to a wide range of audiences, from national protected area agencies to private land-owners who are establishing their own nature-based tourism enterprises.' Jeffrey McNeely, International Union for Conservation of Nature, Switzerland Nature-based Tourism and Conservation unearths new or neglected principles relevant to tourism and recreational economics, environmental valuation and economic theory. Its three parts have chapters on nature-based tourism and its relationships to conservation including case studies dealing with the consequences of World Heritage listing of natural sites, Antarctic, subtropical and tropical national park-based tourism and an NGO's conservation efforts modelled on ecotourism. The final part focuses on tourism utilizing particular wildlife, including sea turtles, whales, penguins, royal albatross, glow-worms and tree kangaroos.
