How to Use Hydrosols

(Floral Waters) in Aromatherapy

Hydrosols are generally known as the aqueous phase obtained from distillation that separates them from the essential oil phase and are highly diluted, acidic, and scented solutions containing variable amounts of essential oil along with other volatile water-soluble compounds (up to approximately 0.1%) [7,8]

Jun 27, 2014 · A brief guide to the healing uses of the "other distillate", the floral and herbal waters produced during the process of distilling essential oils. Gentler and safer than the concentrated essential oils, these hydrosols are important ingredients

in our *Water-soluble essential oils natural aromatic suitable for*

Hydrosols, Hydrolats, Aromatic Waters – oh my! Everything you wanted to know about Hydrosols. When plant matter is steam distilled, both essential oils (oil-soluble constituents), and hydrosols (water-soluble constituents) are produced. Hydrosols contain all of the water-soluble chemical constituents of distilled plant matter. *Memory aid - Pranarom natural vegetable oils at Red Point*

Hydrosols are basically a softer and gentler version of their essential oil counterpart, which makes them a great choice for treating children, people with sensitive skin, or the

elderly They are safe to apply directly to your skin, and are therefore a great option for body mists or skin care formulas
