Impoverished young Americans had no greater champion during the Depression than Eleanor Roosevelt. As First Lady, Mrs. Roosevelt used her newspaper columns and radio broadcasts to crusade for expanded federal aid to poor children and teens. She was the most visible spokesperson for the National Youth Administration, the New Deal's central agency for aiding needy youths, and she was adamant in insisting that federal aid to young people be administered without

discrimination so that it reached blacks as well as whites, girls as well as boys. This activism made Mrs. Roosevelt a beloved figure among poor teens and children, who between 1933 and 1941 wrote her thousands of letters describing their problems and requesting her help. Dear Mrs. Roosevelt presents nearly 200 of these extraordinary documents to open a window into the lives of the Depression's youngest victims. In their own words, the letter writers confide what it was like to be needy and young during the worst economic crisis in American history. Revealing both the strengths and the limitations of New Deal liberalism, this book depicts an administration concerned and caring enough to elicit such moving appeals for help yet unable to respond in the very personal ways the letter writers hoped.

A series of syntheses and consensus reports provides converging evidence regarding effective reading instruction (e.g. NICHD, 2000; Snow, Burnes & Griffin, 1998; Swanson & Hoskyn, 1998).

However, findings from recent observation

studies of reading instruction provided to students with learning disabilities (LD) are disappointing, with few scientifically based reading instructional components observed (e.g. Vaughn, Moody & Schumm, 1998; Moody, Vaughn, Hughes & Fischer, 2000). In addition, since 2001, only one observation study of reading instruction for students with LD has been published (Rieth, Bryant, Kinzer, Colburn, Hur, et al., 2003), and only two such dissertations (Brasnahan, 2001; Kethley, 2005) have been completed, all three of which were conducted in classrooms for students in middle or high school. Thus, no observation study of reading instruction for elementary students with LD has been published in the past seven years. Within this timeframe, however, systematic and wide-spread efforts have been made to bridge the gap between research and practice in the area of reading instruction (see Reading First Teacher Education Network at [www.rften.org](http://www.rften.org)). The purpose of this study was to document the extent to which effective reading instruction was provided to students with LD served in the resource room setting. The amount of student and teacher text reading,

grouping strategies used, and student achievement over the course of one semester was examined as well. Ten special education resource room teachers were observed during the spring academic semester. Information was gathered through direct observation and standardized measurement of student academic outcomes. All observations were conducted during reading instructional time. Results indicated a range of scientifically based reading instruction of average to high average quality. Students made no stastically significant growth on more distal measures of reading achievement. However, statistically significant growth was detected in oral reading fluency using passages one grade level below student assignment.

Teachers make a difference. The success of any plan for improving educational outcomes depends on the teachers who carry it out and thus on the abilities of those attracted to the field and their preparation. Yet there are many questions about how teachers are being prepared and how they ought to be prepared. Yet, teacher preparation is often treated as an afterthought in discussions of improving the public education system. *Preparing Teachers* addresses the issue of teacher preparation with specific attention to reading, mathematics, and science. The book evaluates the characteristics of the candidates who enter teacher preparation programs, the sorts of instruction and experiences teacher candidates receive in preparation programs, and the extent that the required instruction and experiences are consistent with converging scientific

evidence. *Preparing Teachers* also identifies a need for a data collection model to provide valid and reliable information about the content knowledge, pedagogical competence, and effectiveness of graduates from the various kinds of teacher preparation programs. Federal and state policy makers need reliable, outcomes-based information to make sound decisions, and teacher educators need to know how best to contribute to the development of effective teachers. Clearer understanding of the content and character of effective teacher preparation is critical to improving it and to ensuring that the same critiques and questions are not being repeated 10 years from now.

"As elegantly practical as it is theoretically elegant. It is a guided tour, as one examines the tools of expert teachers as they engage students in a journey that is aptly dubbed Reading Apprenticeship?learning how to become a savvy, strategic reader under the tutelage

of thoughtful, caring, and demanding teachers. P. David Pearson, University of California, Berkeley, and founding editor of the Handbook of Reading Research. Reading for Understanding is a monumental achievement. It was a monumental achievement when it came out as a first edition in 1999, bringing years of rigorous reading research together in a framework for teaching that made sense in actual secondary school classrooms. Now, just thirteen years later, Schoenbach and Greenleaf have several randomized clinical trials and multiple ongoing studies at their fingertips to demonstrate the effects of this approach for developing the reading and thinking of young people in our nation's middle and high school classrooms, as well as in community college classrooms. Their careful work on developing disciplinary literacy among all students represents a passion for and commitment to supporting students and their teachers in reading for understanding, which translates to reading for enjoyment, self-awareness, learning, and for purposeful and informed action in our society. Elizabeth Moje, Arthur F. Thurnau Professor and Associate Dean for

Research, School of Education, University of Michigan Reading Apprenticeship has proven to be an inspiration to Renton Technical College faculty and students alike. They have learned together to view themselves as readers in transformative ways, as they embrace powerful techniques to increase reading comprehension. The Early Grade Reading Assessment (EGRA) measures students' progress towards reading. EGRA gauges early literacy skills through a 15-minute individual oral assessment of five fundamental reading skills. RTI worked with education experts to develop the EGRA in 2006, and it has been piloted and implemented in more than 40 countries. This volume aims to take stock of the substantial amount of information and experience generated through the use of EGRA, and to share this knowledge with practitioners, policymakers, and international donors. Chapters cover not only particular applications of the instrument but also put EGRA in the context of broader issues and developments in literacy and education.

#### **Teaching Children to Read : an Evidence-based Assessment of the Scientific Research Literature on Reading and Its Implications for Reading Instruction** Carson-Dellosa Publishing

Reading fluency has been identified as a key component of proficient reading.

Research has consistently demonstrated significant and substantial correlations between reading fluency and overall reading achievement. Despite the great potential for fluency to have a significant outcome on students' reading achievement, it continues to be not well understood by teachers, school administrators and policy makers. The chapters in this volume examine reading fluency from a variety of perspectives. The initial chapter sketches the history of fluency as a literacy instruction component. Following chapters examine recent studies and approaches to reading fluency, followed by chapters that explore actual fluency instruction models and the impact of fluency instruction. Assessment of reading fluency is critical for monitoring progress and identifying students in need of intervention. Two articles on assessment, one focused on word recognition and the other on prosody, expand our understanding of fluency measurement. Finally, a study from Turkey explores the relationship of various reading competencies, including fluency, in an integrated model of reading. Our hope for this volume is that it may spark a

renewed interest in research into reading fluency and fluency instruction and move toward making fluency instruction an even more integral part of all literacy

instruction.
