This book specifically complies to the latest Canadian Electrical Code, and provides simple instructions for electrical repairs and projects. Most do-it-yourselfers don't give a second thought to doing repairs or projects around their homes; until it comes to an electrical project. This book provides step-by-step procedures that give you the knowledge and confidence to execute your own electrical projects. The first three sections explain how electricity works in your home, the terms you will need to know to buy the right electrical materials for the job, and the tools that you will need to properly and safely make the repairs. The chapters that follow cover basic electrical projects in order of difficulty, throughout your home, such as working with wire, switches and outlets, replacing cords, plugs and sockets, installing lighting, and working with electricity in new and existing construction. This book is not intended to make you into a professional electrician. In fact, you will find notations every so often that advise you to call in a professional to handle special procedures. In some areas, local and provincial codes require that you have your work inspected by a professional once you complete a project. This is the smart, safe way to handle it, and you almost always will find that the cost of professional help is not prohibitive. This easy-to-follow book simplifies the often difficult subject of wiring so that you can address your own electrical repairs, maintenance and new projects with detailed information. Practical Interpretations and Applications of Electrical Code Rules  
Our Canadian Electrical Code is divided into five parts as follows:  
Part 1 This is most familiar to us because it is the set of Rules we are required to apply daily in all our electrical work. This is the standard normally adopted in part or in whole by the provincial authority in each province. Once this set of Rules has been adopted it becomes the legal document which must be complied with and which cannot be altered by bulletin or directive. Part II

This is the minimum standard manufacturers of all electrical items must comply with in order to obtain a certification mark on their product. The process of obtaining a certification mark is described in Section 2, page 5. We who install electrical wiring are always concerned and look for that certification mark which is recognized in Canada but we, as installers, do not apply this mark. If the equipment does not already have a valid certification mark we may not connect it. Part III This is the set of rules used to regulate overhead power line construction. It is the standard adopted by Provincial Authority that regulates electrical line construction. Part IV This standard deals with magnetic interference cause by electrical installations. Part V This standard regulates electrical installations in mines and above ground wiring directly associated with the mine.
