Does mental disorder cause crime? Does crime cause mental disorder? And if either of these could be proved to be true what consequences should stem for those who find themselves deemed mentally disordered offenders? Mental Health and Crime examines the nature of the relationship between mental

disorder and crime. It concludes that the broad definition of what is an all too common human condition – mental disorder – and the widespread occurrence of an equally all too common human behaviour – that of offending – would make unlikely any definitive or easy answer to such questions. For those who offend in the context of mental disorder, many aspects of the criminal justice process, and of the disposals that follow, are adapted to take account of a relationship between mental disorder and crime. But if the very relationship is questionable, is the way in which we deal with such offenders discriminatory? Or is it perhaps to their benefit to be thought of as less responsible for their offending than fully culpable offenders? The book thus explores not only the

nature of the relationship, but also the human rights and legal issues arising. It also looks at some of the permutations in the therapeutic process that can ensue when those with mental health problems are treated in the context of their offending behaviour.

In contemporary philosophy, substantive moral theories are typically classified as

either consequentialist or deontological. Standard consequentialist theories insist, roughly, that agents must always act so as to produce the best available outcomes overall. Standard deontological theories, by contrast, maintain that there are some circumstances where one is permitted but not required to produce the best overall results, and still other circumstances in which one is positively forbidden to do so. Classical utilitarianism is the most familiar consequentialist view, but it is widely regarded as an inadequate account of morality. Although Professor Scheffler agrees with this assessment, he also believes that consequentialism seems initially plausible, and that there is a persistent air of paradox surrounding

typical deontological views. In this book, therefore, he undertakes to reconsider the rejection of consequentialism. He argues that it is possible to provide a rationale for the view that agents need not always produce the best possible overall outcomes, and this motivates one departure from consequentialism; but he shows that it is surprisingly difficult to provide a satisfactory rationale for the view that there are times when agents must not produce the best possible overall outcomes. He goes on to argue for a hitherto neglected type of moral conception, according to which agents are always permitted, but not always required, to produce the best outcomes.

Trauma theory has become a burgeoning site of research in recent decades, often demanding interdisciplinary reflections on trauma as a phenomenon that defies disciplinary ownership. While this research has always been challenged by the temporal, affective, and corporeal dimensions of trauma itself, trauma theory now faces theoretical and methodological obstacles given its growing interdisciplinarity. *Trauma and Transcendence* gathers scholars in philosophy, theology, psychoanalysis, and social theory to engage the limits and prospects of trauma's transcendence. This volume

draws attention to the increasing challenge of deciding whether trauma's unassimilable quality can be wielded as a defense of traumatic experience against reductionism, or whether it succumbs to a form of obscurantism.

The science of death and the logic of reincarnation give pause to our current thinking process. Yet, after reading this book you can nod our head in understanding and move on, more mature perhaps in knowing we do live on in some sense. Just not in the way we most wished for.
