In April 2015, the Institute of Medicine convened a public workshop to explore recent shifts in the health and health care industry and their implications for health professional education (HPE) and workforce learning. This study serves as a follow-up to the 2009 Lancet Commission report on health professions education for the 21st century and seeks to expand the report's messages beyond medicine, nursing, and public health.

Envisioning the Future of Health Professional Education discusses opportunities for new platforms of communication and learning, continuous education of the health workforce, opportunities for team-based care and other types of collaborations, and social accountability of the health professions. This study explores the implications that shifts in health, policy, and the health care industry could have on HPE and workforce learning, identifies learning platforms that could facilitate effective knowledge transfer with improved quality and efficiency, and discusses opportunities for building a global health workforce that understands the role of culture and health literacy in perceptions and approaches to health and disease.

Chiropractic Peace marks the beginning of the end for infighting between mixers (broad-scope) and straights (focused-scope). The three refreshing essays by Drs. Reed Phillips, Ashley Cleveland, and Gerry Clum introduce chiropractic leaders, students, faculty and practitioners to a new, less contentious, dialogue on the political, sociological, philosophical and historical issues of our profession. After years of polemical argumentation, reading Chiropractic Peace is like getting a new pair of glasses or a much-needed spinal adjustment. Uplifting relief! Instead of seeking peace by trying to hammer out compromises, which many do not find successful in the end, the three writers utilize the concept of pluralism to construct a big tent which will accommodate all ethical chiropractors who adhere to basic chiropractic principles. The three contributors bring a much-needed respectful tone to the discourse. And in an important turn for the profession, each writer acknowledges that all of the camp-focused-scope, middle-scope, and broad-scope are committed to ethical and skillful practice.

The Religion of Chiropractic Jones & Bartlett Learning

What does scientific research show about the effectiveness of chiropractic care? How are chiropractors trained and what do they do? When should one turn to chiropractic care, and how does one select a practitioner? This book answers all of these questions and more. Chiropractic is the most frequently used complementary and alternative medicine (CAM) practice in the United States, with nearly \$4 billion spent out-of-pocket annually by chiropractic patients. In fact, as evidence for its effectiveness for common conditions such as back pain continues to mount and acceptance grows in a variety of health care settings, chiropractic could be considered more "mainstream" than many other forms

of CAM. In this information-packed single-volume work, an expert team led by Cheryl Hawk—a well-known chiropractic researcher—explains chiropractic licensure, practice, and effectiveness to general readers researching chiropractic care options and to undergraduate students choosing a major or specialty. Readers will see the range of scientific evidence supporting the use of chiropractic health care for many common conditions, learn about the typical chiropractic clinical encounter and chiropractic procedures, and understand the criteria by which patients and other health professionals can use to select a chiropractic physician. This book also provides health care practitioners in other fields with current information that enables a greater understanding of the training and the roles of chiropractors in health care.

Best Practices in Clinical Chiropractic Jones & Bartlett Learning Chiropractic is by far the most common form of alternative medicine in the United States today, but its fascinating origins stretch back to the battles between science and religion in the nineteenth century. At the center of the story are chiropractic's

colorful founders, D. D. Palmer and his son, B. J. Palmer, of Davenport, Iowa, where in 1897 they established the Palmer College of Chiropractic. Holly Folk shows how the Palmers' system depicted chiropractic as a conduit for both material and spiritualized versions of a "vital principle," reflecting popular contemporary therapies and nineteenth-century metaphysical beliefs, including the idea that the spine was home to occult forces. The creation of chiropractic, and other Progressive-era versions of alternative medicine, happened at a time when the relationship between science and religion took on an urgent, increasingly competitive tinge. Many remarkable people, including the Palmers, undertook highly personal reinterpretations of their physical and spiritual worlds. In this context, Folk reframes alternative medicine and spirituality as a type of populist intellectual culture in which ideologies about the body comprise a highly appealing form of cultural resistance. *Chiropractic Medical Reports* Xlibris Corporation Since 1973, TEXAS MONTHLY has chronicled life in contemporary Texas, reporting on vital issues such as politics, the environment, industry, and education. As a leisure guide, TEXAS MONTHLY continues to be the indispensable authority on the Texas scene, covering music, the arts, travel, restaurants, museums, and cultural events with its insightful recommendations.
