Nursing Care in Pediatric Respiratory Disease Children's Press(CT)

A text in pediatric pulmonology that represents the practice of expert clinicians. The first section is devoted to discussion of how growth and development affect the respiratory system. The second section updates applications of the diagnostic tools used in evaluating children with respiratory disease. The next three sections focus on clinical problems, first as unknowns, then as specific respiratory

diseases, and finally as respiratory aspects of non-pulmonary diseases. The final section reviews the rationale behind modern respiratory care, with an introductory chapter on how to evaluate the results of clinical trials. Annotation copyright by Book News, Inc., Portland, OR

Take a deep breath and then let it out. Did you feel your chest rise and fall? That is actually your lungs filling with oxygen and then pushing carbon dioxide back out when you exhale. Without your lungs and your entire respiratory system, the rest of your body wouldn't receive the oxygen you need to survive. To give your body the oxygen it needs, you breathe twenty times every minute. You breathe more than twenty thousand times each and every day. Acclaimed science writer Seymour Simon has teamed up with the Smithsonian Institution to explore the important journey

that air takes in and out of your lungs.
