What escaped at Three Mile Island was not only radiation, but, more importantly for the nuclear power industry, public confidence in technology and technocracy, report Cantelon and Williams in their detailed account of the response of the Department of Energy to America's worst civilian nuclear power accident. What happened at Three Mile Island was a technological failure of monstrous proportions. Yet, the authors contend, the serious extent of the accident was caused by human error: technocrats blundered, lost control of technology, and, refusing to admit it, gave confusing, inconsistent, and jargon-laden explanations. There was a welter of information and misinformation. To sift out the truth that would enable them to write the history of this contemporary event, Cantelon and Williams relied on unpublished archival materials including logs of scientists and government officials on oral interviews with participants, and on reports of other government agencies. The result is a significant history, one that shows how scientists and politicians responded to the unbelievable and unexpected as they tried to deal with a highly technical event in the glare of television lights and under the inquisitive and fearful eyes of the public. The danger was never real, yet for the nation and certainly for the immediate community around Three Mile Island, risk perceived was risk endured. Many of the residents of what became a war zone will never be the same, though radiation never touched them. Imagination and unconscious fears were far more important than any accurate perception of risk after a Nuclear Regulatory Commission official used "the term "meltdown" at a Friday afternoon news conference."

Condition assessment and characterization of materials and structures by means of nondestructive testing (NDT) methods is a priority need around the world to meet the challenges associated with the durability, maintenance, rehabilitation, retrofitting, renewal and health monitoring of new and existing infrastructures including historic monuments. Numerous NDT methods that make use of certain components of the electromagnetic and acoustic spectrum are currently in use to this effect with various levels of success and there is an intensive worldwide research effort aimed at improving the existing methods and developing new ones. The knowledge and information compiled in this book captures the current state of the art in NDT methods and their application to civil and other engineering materials and structures. Critical reviews and advanced interdisciplinary discussions by world-renowned researchers point to the capabilities and limitations of the currently used NDT methods and shed light on current and future research directions to overcome the challenges in their development and practical use. In this respect, the contents of this book will equally benefit practicing engineers and researchers who take part in characterization, assessment and health monitoring of materials and structures.

As existing buildings age, nearly half of all construction activity in Britain is related to maintenance, refurbishment and conversions. Building adaptation is an activity that continues to make a significant contribution to the workload of the construction industry. Given its importance to sustainable construction, the proportion of adaptation works in relation to new build is likely to remain substantial for the foreseeable future, especially in the developed parts of the world. *Building Adaptation*, Second Edition is intended as a primer on the physical changes that can affect older properties. It demonstrates the general principles, techniques, and processes needed when existing buildings must undergo alteration, conversion, extension, improvement, or refurbishment. The publication of the first edition of *Building Adaptation* reflected the upsurge in refurbishment work. The book quickly established itself as one of the core texts for building surveying students and others on undergraduate and postgraduate built environment courses. This new edition continues to provide a comprehensive introduction to all the key issues relating to the adaptation of buildings. It deals with any work to a building over and above maintenance to change its capacity, function or performance.

CLICK HERE to download the first chapter from Psychovertical Psychovertical is the story of what happens to a nice lower-class kid with dyslexia who gains control over his circumstances by clinging to giant stone faces, thousands of feet in the air, for days at a time. In this case, Kirkpatrick uses his 12-day solo climb of the Reticent Wall on California's El Capitan as the experience that helps him understand how growing up poor and struggling with dyslexia and low self-confidence set him on a path of extreme adventure. Kirkpatrick's writing is gripping and highly entertaining -- even non-climbers will enjoy his raw intensity, gallows humor, and honest, self-deprecating storytelling style. This book is a Boardman-Tasker Prize winner, which is recognition given for outstanding mountaineering literature. From the judges' remarks: "The book is very cleverly structured....The cuts from scene to scene and climb to climb work wonderfully well -- a sort of mountaineering Day of The Jackal -- as Kirkpatrick comes closer and closer to his nemesis on Reticent Wall. And it is this climb, the running narrative of the book, that grips the most: 14 pitches of aid climbing, unrelieved by conversation with a partner other than himself, should by rights be boring. But it grips the heart further and further."

This open access book focuses on Switzerland-based medium-sized companies with a longstanding export tradition and a proven dominance in global niche markets. Based upon in-depth documentation and analysis of 36 Swiss companies over their entire history, an expert team of authors presents several parallels in the pathways and success factors which allowed these firms to become dominant and operate from a high-cost location such as Switzerland. The book enhances these insights by providing detailed company profiles documenting the company history, development, and how their relevant global niche positions were reached. Readers will benefit from these profiles as they compile a diverse selection of industries, mainly active within the B2B sector, with mostly mature companies (60 years or older than 100 years since founding) and different types of ownership structures including family firms. 'Masterpieces of Swiss Entrepreneurship' brings unique learning opportunities to owners and leaders of SMEs in Switzerland and elsewhere. Findings are based on detailed bottom-up research of 36 companies -- without any preconceived notions. The

book is both conceptual and practical. It fosters understanding for different choices in development pathways and management practices. Matti Alahuhta, Chairman DevCo Partners, ex-CEO Kone, Board member of several global listed companies, Helsinki, Finland Start-up entrepreneurs need proven models from industry which demonstrate the various paths to success. "Masterpieces of Swiss Entrepreneurship" provides deep insights highlighting these models and the important trade-offs entrepreneurial teams must consider when choosing the path of high growth or of maximum control, as they are often mutually exclusive. Beginning with the fundamentals of carpentry work within a domestic construction setting, this book outlines which tools are required, and examines their care and proper use before covering the interpretation of technical drawings. It goes on to explain a wide range of first-fixing operations prior to plastering, and second-fixing operations after plastering. Each chapter covers the subject in great detail, with step-by-step illustrations and text to provide the reader with a complete picture of the sequence of work required to carry out each job. *Goring's Manual of First and Second Fixing Carpentry* has been updated to take recent developments in the building trades into account, and is also fully up to date with current industry best practice. Printed in full colour throughout, new chapter has been incorporated to address the sharpening of traditional saws. The breadth of coverage and easily accessible 'how-to' approach makes this book an ideal resource for apprentices taking NVQs and those following Construction Awards within the Wood Occupations from City & Guilds/Construction Skills. The technical detail and practical focus ensures that this book will be a vital purchase for all students, and an essential reference for any experienced carpenter or joiner.

YA. Adventure fiction. Fantasy fiction. Listen then, and I'll tell you again of the Battle of the Rock. But none of your usual wriggling, or I'll stop before I've begun . . . Halli loves the old stories from when the valley was a wild and dangerous place - when the twelve legendary heroes stood together to defeat the ancient enemy, the bloodthirsty Trows. Halli longs for adventure but these days the most dangerous thing in the valley is boredom. He tries to liven things up by playing practical jokes. But when one of his jokes goes too far, he reawakens an old blood feud and finds himself on a hero's quest after all. Along the way he meets a ruthless thief, a murderous rival, and a girl who may just be as fearless as he is. Jonathan Stroud has created an epic saga with a funny, unique spin, and an unforgettable anti-hero.

Many of the initial developments towards the Internet of Things have focused on the combination of Auto-ID and networked infrastructures in business-to-business logistics and product lifecycle applications. However, the Internet of Things is more than a business tool for managing business processes more efficiently and more effectively - it will also enable a more convenient way of life. Since the term Internet of Things first came to attention when the Auto-ID Center launched their initial vision for the EPC network for automatically identifying and tracing the flow of goods within supply-chains, increasing numbers of researchers and practitioners have further developed this vision. The authors in this book provide a research perspective on current and future developments in the Internet of Things. The different chapters cover a broad range of topics from system design aspects and core architectural approaches to end-user participation, business perspectives and applications.

Governments have traditionally left the plight of street children and working children, who by some counts number over 100 million, to individuals and nongovernmental organizations, including many religious organizations. As a result, there are a multitude of small, uncoordinated, but highly effective projects throughout the world concentrated in urban areas. The 18 case studies presented illustrate the work carried out by these organizations and demonstrate how rehabilitation can be conducted working with and for children. Part 1, "Reinsertion through Education," looks at seven projects characterized by efforts to ensure the reinsertion of street and working children into their families or mainstream society through education. The four projects in part 2 rely on work rather than education in their efforts. Part 3 describes three projects that concentrate on improving the situation of children by teaching them to use the street environment and by capitalizing on their experiences and practical intelligence. Part 4 concentrates on the administration of projects for street children. The case studies are presented without commentary to form a collection of results and ideas to stimulate imagination and interest, particularly among those responsible for government policies. Valid solutions will come only from strong governmental commitment. (SLD)

The traditional doctrine of Islamic law in regard to international relations is well known. The Shari'a includes many excellent provisions about declarations of war, treaties of peace, armistices, diplomatic envoys, negotiations and guarantees of safe conduct. But the fact remains that it divides the world, broadly speaking, into the "Abode of Islam" and the "Abode of War," and that it envisages the continuance of intermittent war between them until the latter is absorbed in the former. In the course of such fighting, and in the intervals in between, many civilities were to be meticulously observed; but prisoners of war could be killed, sold or enslaved at the discretion of the Muslim authorities, and the women of those who resisted the advance of Islam could be taken as slave-concubines, regardless of whether they were single or married. The "Abode of Islam" did not,

indeed, consist exclusively of Muslims, for those whose religion was based on a book accepted by Islam as originally inspired and in practice, indeed, those other religions too - were not forced to embrace Islam but only to accept Muslim rule. They were granted the status of dhimmis, were protected in their persons and their property, were allowed to follow their own religion in an unobtrusive fashion, and were accorded the position of essentially second-class citizens. They were also of course, perfectly free to embrace Islam; but for a Muslim to be converted to another faith involved the death penalty.
