This open access book consists of 39 short essays that exemplify how interactions between inter- and trans-national interdependencies and domestic factors have shaped the dynamics of social policy in various parts of the world at different points in time. Each chapter highlights a specific type of interdependence which has been identified to provide us with a nuanced understanding of specific social policy developments at discrete points in history. The volume is divided into four parts that are concerned with a particular type of cross-border interrelation. The four parts examine the impact on social policy

of trade relations and economic crises, violence, international organisations and cross-border communication and migration. This book will be of interest to academics and postgraduate students in the field of social policy, global history and welfare state research from diverse disciplines: sociology, political science, history, law and economics. .

This book presents a collection of state-of-the-art artificial intelligence and big data analytics approaches to cybersecurity intelligence. It illustrates the latest trends in AI/ML-based strategic defense mechanisms against malware, vulnerabilities, cyber

threats, as well as proactive countermeasures. It also introduces other trending technologies, such as blockchain, SDN, and IoT, and discusses their possible impact on improving security. The book discusses the convergence of AI/ML and big data in cybersecurity by providing an overview of theoretical, practical, and simulation concepts of computational intelligence and big data analytics used in different approaches of security. It also displays solutions that will help analyze complex patterns in user data and ultimately improve productivity. This book can be a source for researchers, students, and practitioners

interested in the fields of artificial intelligence, cybersecurity, data analytics, and recent trends of networks.

An unexpected letter. An unlikely friendship. A chance to start again. Ever since she first picked up a violin, Hope Sullivan dreamed of going to music college, joining an orchestra and travelling the world with her best friend Janey. But when her parents were killed in a car accident on the way to one of her recitals, she gave it all up to look after her younger sister, Autumn. Ten years later, Janey is living their dream on her own, Autumn is flourishing as a doctor and Hope's life is

smaller and less musical than ever.

Arnold Quince had the happiest of lives - until he lost his beloved wife Marion. Once the life and soul of the village, he withdrew into his grief and pushed all his friends away. Now, five years on, he is sick, lonely and just counting down the years until he can be with Marion again.

When Hope and Arnold are pushed into writing to one another, neither has any idea how much their life is about to change. *****

This book comprises the proceedings of the International Conference on Machine Vision and Augmented Intelligence (MAI 2021) held at IIIT, Jabalpur, in February 2021. The conference proceedings encapsulate the best deliberations held during the conference. The diversity of participants in the event from academia, industry, and research reflects in the articles appearing in the volume. The book theme encompasses all industrial and non-industrial applications

in which a combination of hardware and software provides operational guidance to devices in the execution of their functions based on the capture and processing of images. This book covers a wide range of topics such as modeling of disease transformation, epidemic forecast, COVID-19, image processing and computer vision, augmented intelligence, soft computing, deep learning, image reconstruction, artificial intelligence in healthcare, brain-computer interface, cybersecurity, and social network analysis, natural language processing, etc.

An examination of Berlin's turbulent history through the lens of its water and energy infrastructures. In *Remaking Berlin*, Timothy Moss takes a novel perspective on Berlin's turbulent twentieth-century history, examining it through the lens of its water and energy infrastructures. He shows that, through a century of changing regimes, geopolitical interventions, and socioeconomic volatility, Berlin's networked urban

infrastructures have acted as medium and manifestation of municipal, national, and international politics and policies. Moss traces the coevolution of Berlin and its infrastructure systems from the creation of Greater Berlin in 1920 to remunicipalization of services in 2020, encompassing democratic, fascist, and socialist regimes.

Emerging from a collection of city states 150 years ago, no other country has had as turbulent a history as Germany or enjoyed so much prosperity in such a short time frame. Today, as much of the world succumbs to authoritarianism and democracy is undermined from its

heart, Germany stands as a bulwark for decency and stability. Mixing personal journey and anecdote with compelling empirical evidence, this is a critical and entertaining exploration of the country many in the West still love to hate. Raising important questions for our post-Brexit landscape, Kampfner asks why, despite its faults, Germany has become a model for others to emulate, while Britain fails to tackle contemporary challenges. Part memoir, part history, part travelogue, *Why the Germans Do It Better* is a rich and witty portrait of an eternally fascinating country.

The Berlin Wall is arguably the most prominent symbol of the Cold War era. Its construction in 1961 and its dismantling in 1989 are broadly understood as pivotal moments in the history of the last century. In *A Wall of Our Own*, Paul M. Farber traces the Berlin Wall as a site of pilgrimage for American artists, writers, and activists. During the Cold War and in the shadow of the Wall, figures such as Leonard Freed, Angela Davis, Shinkichi Tajiri, and Audre Lorde weighed the possibilities and limits of American democracy. All were sparked by their first encounters with the Wall, incorporated their reflections in books and artworks directed toward the geopolitics

of division in the United States, and considered divided Germany as a site of intersection between art and activism over the respective courses of their careers. Departing from the well-known stories of Americans seeking post-World War II Paris for their own self-imposed exile or traveling the open road of the domestic interstate highway system, Farber reveals the divided city of Berlin as another destination for Americans seeking a critical distance. By analyzing the experiences and cultural creations of "American Berliner" artists and activists, Farber offers a new way to view not only the Wall itself but also how the Cold War still

structures our thinking about freedom, repression, and artistic resistance on a global scale.

This book, A Mosaic of

Computational Topics: from Classical to Novel, is a collection of papers published to honor Professor Jetty Kleijn on the occasion of her 65th birthday. The scope and reach of her research is truly broad. She has made significant and lasting contributions in several research areas, both through the solving of challenging problems and in her pioneering of new research directions. She has published influential papers contributing to the foundations of computer science, in particular, in the area of formal languages and automata theory; to concurrency theory, in particular, Petri nets; and to natural computing, in particular bio-inspired computing and the computational modeling of bio-processes. A significant part of Professor Kleijn's research portfolio is interdisciplinary, including her work on the Petri net modeling of biological processes and the development of novel models of information processing in bio-systems such as reaction systems. She is also passionately engaged in promoting the involvement of women in computer science. Jetty and her work are well-recognized by the scientific community, a fact demonstrated by the enthusiastic response to the invitation to contribute to this book, and the 14 carefully refereed papers collected together here explore a number of research topics that are either

directly or indirectly related to research directions pursued by Jetty Kleijn in the course of her career.

This textbook is about working in teams to create functioning software. It covers skills in agile software development methods, team working, version control and continuous integration and shows readers how to apply some of the latest ideas from lean, agile and Kanban. Part I, which focuses on People, describes various project roles and the skills needed to perform each role. This includes members of self-organizing teams, scrum masters, product owners and activities for managing other stakeholders.

The skills needed to create Product artefacts are detailed in Part II. These include skills to create agile requirements, architectures, designs as well as development and security artefacts. The agile development Process to coordinate with co-workers is described in Part III. It introduces the skills needed to facilitate an incremental process and to use software tools for version control and automated testing. Eventually some more advanced topics are explained in Part IV. These topics include large projects comprising multiple cooperating teams, automating deployment, cloud software services, DevOps and evolving live systems. This textbook addresses

significant competencies in the IEEE/ACM Computing Curricula Task Force 2020. It includes nearly 100 exercises for trying out and applying the skills needed for agile software development. Hints, tips and further advice about tackling the exercises are presented at the end of each chapter, and a case study project, with downloadable source code from an

online repository, integrates the skills learned across the chapters. In addition, further example software projects are also available there. This way, the book provides a hands-on guide to working on a development project as part of a team, and is inspired by the needs of early career practitioners as well as undergraduate software engineering and computer science students.
