However, the control of manufacturing techniques for optoelectronic systems is more delicate than that of microelectronic technologies. This practical resource, divided into four chapters, examines several methods for determining the reliability of infrared LED devices. The primary</p>	<p>interest of this book focuses on methods of extracting fundamental parameters from the electrical and optical characterization of specific zones in components. Failure mechanisms are identified based on measured performance before and after aging tests. Knowledge of failure mechanisms allows formulation of degradation laws, which in turn allow an accurate lifetime</p>	<p>distribution for specific devices to be proposed. Deals exclusively with reliability, based on the physics of failure for infrared LEDs. Identifies failure mechanisms, lifetime distribution, and selection of the best component for dedicated applications. Uses a complete methodology to reduce the number of samples needed to estimate lifetime distribution. Focuses on</p>

Digital Library Federation For professional office preparatory courses and microcomputer programs in any curriculum. This book prepares students for taking the OPAC certification

test nationally recognized certification endorsed by the International Association for Administrative Assistants (formerly PSI). It presents essential office skills that are evaluated when the student takes the OPAC test. Skills are based on the IAAP skills standard for Office Professionals. There are twenty-three employability tests in all. OPAC certification is well recognized

among U.S. companies as a measure of preparedness for employment.

Seventh Edition is a compilation of best practices in the field of school library management. An excellent textbook for professors teaching LIS courses, the book contains updates to standards and technologies, and features the latest initiatives guiding practices, including Standards for the 21st Century Learner and Empowering Learners: Guidelines for School Library Programs. Each of the book's five sections features helpful tips from LMC and lists relevant resources for school library management. Selected articles address standards, inquiry, ethics, and information literacy. The book also includes a focus on the role of the school librarian in designing authentic assessments. *Paper Trade Journal* IntraWEB, LLC and Claitor's Law Publishing Based on feedback, the authors have streamlined their bestselling reference to zero in on just the clinical answers ophthalmologists need in day-to-day practice. institutional mission, librarians need to assess the strengths of their collections in particular subject areas. This book describes and illustrates a brief test for determining a library's collection strength. Though such tests are most often employed in academic libraries, the methodology outlined by the author should be useful to all types of libraries in assessing the

strength of their holdings. In a time of increasing material and limited resources, libraries need to be particularly judicious in deciding which works to acquire. Oftentimes, a library seeks to develop strong holdings in one or more subject areas. Such an approach is especially useful for libraries that share their resources with other institutions. To plan their acquisitions

carefully and to be of greatest use to other consortia members, a library needs to gauge the strength of its holdings accurately. This volume describes and illustrates a relatively brief test to assign libraries a score for existing collection strength in a subject area. Drawing upon expert human judgment and holdings data available from OCLC, the test can assist librarians in setting and verifying

<p>collection levels on the RLG or WLN Conspectus scales. Collection strength is often verified in a labor-intensive fashion. The brief test presented by the author is an economical alternative to the more typical labor-intensive approach to collection analysis. <i>Reliability, Robustness and Failure Mechanisms of LED Devices</i> Government Printing Office This report offers a</p>	<p>survey of the methods that are being deployed at leading digital libraries to assess the use and usability of their online collections and services. Focusing on 24 Digital Library Federation member libraries, the study's author, Distinguished DLF Fellow Denise Troll Covey, conducted numerous interviews with library professionals who are engaged in assessment. The report</p>	<p>describes the application, strengths, and weaknesses of assessment techniques that include surveys, focus groups, user protocols, and transaction log analysis. Covey's work is also an essential methodological guidebook. For each method that she covers, she is careful to supply a definition, explain why and how libraries use the method, what they do with the results, and what problems they</p>

encounter. The report includes an extensive bibliography on more detailed methodological information, and descriptions of assessment instruments that have proved particularly effective.
