Are your energy bills  
through the roof, and is

your home still cold in  
the winter and hot in  
the summer? That's  
the reality for many  
homeowners in  
Wisconsin today, but it  
doesn't have to be that  
way. Advances in glass  
technology and window  
construction in recent  
years have made old  
style windows

obsolete. In fact, some windows now on the market are more energy efficient than the walls that surround them. Taking into consideration the window technology available today, we are able to produce high-performance windows that keep comfort at a maximum and energy consumption at a minimum. Read this book if you are considering replacing some or all of the windows in your home. Learn how to assess the performance metrics on window labels and choose the best product for your situation. Find out about single-, double-, and triple-glazing and how it affects conduction and air infiltration. Read about argon and krypton, and learn which more

effectively slows conduction. From the hazards of "doing it yourself," to the pitfalls of hiring a handyman, Wisconsinite Scott "The Window Guy" Young draws from a lifetime of experience replacing windows the right way. He guides you through the basics of glass production, window styles and construction, installation, price, and long-term value. Arm yourself with the knowledge you need to make informed decisions about replacing the windows in your home. Then window shop like a pro and enjoy the comfort, convenience, good looks, and energy efficiency that high-quality, properly installed windows will deliver for years to come.

According to a recent national survey, more construction

contractors use QuickBooks Pro and QuickBooks than all other accounting programs combined. And for good reason. QuickBooks Pro excels at all the routine paperwork in a construction office: writing checks, keeping track of your bank balance, sending out invoices and statements, creating up-to-the-minute profit and loss statements for the month, year or by job, writing payroll checks, paying suppliers and subcontractors, tracking job costs, comparing estimated and actual costs for each job, and much more. But there's a lot to learn in QuickBooks Pro. And converting to a new accounting system can be a complex and confusing

task, even if you have a strong background in accounting and plenty of time to install the new system. That's why this book was written -- because most construction pros aren't accounting experts and have more important work to do at the job site.

A must-have reference to create content-rich BIM objects and models A cutting-edge technology, Building Information Modeling (BIM) software allows AEC professionals to produce data-intensive 3D building models that far exceed those rendered with the 2D limitations of CAD, today's industry standard. Unlike CAD, however, no consensus has been reached among AEC industries for agreed upon guidelines directing BIM models. To fill this void, this book explores the different

approaches used in designing a BIM model and incorporates them into one cohesive strategy that serves as a digital road map going forward. BIM Content Development: Details the various types of information (graphic and data) that Building Information Modeling (BIM) can gather about a building, such as its dimensions and material, its performance, its functionality, its interaction with other structures, and how often it must be maintained Presents a vendor-neutral approach to thinking about, organizing, and managing data used to create a 3D building model Covers the different methods for organizing content, such as CSI's

MasterFormat®, Uniformat, OmniClass, and Industry Foundation Classes (IFC) Providing the means and methods for effective content creation, BIM Content Development offers sound guidance for graphic standards and data management solutions to maximize the ability of professionals to operate on any BIM software platform—and shows how to strengthen the decision-making process to unleash powerful tools for modeling a building's informational profile. In 2018 the Nordic Council of Ministers published a report urging more Nordic cooperation on environment and climate. The report proposes 12 recommendations, whereof more active sharing of knowledge and experience with green public procurement. The aim of this project was to develop cooperation between large Nordic cities in the form of a public buyer's network. The network was to conduct market dialogues on a selected area and promote environmental

solutions. Gathering public contracting authorities with the same need and then challenge the market together is an effective way to create a larger market for newly developed solutions. The topic has been to work towards zero emission delivery of goods. From 2019 until the autumn of 2021 there have been various activities which you can read about in this report.

Construction Project Management: An Integrated Approach is a management approach to leading projects and the effective choice and use of project management tools and techniques. It seeks to push the boundaries of project management to take on board future needs and user issues. Integration of the construction project, meaning closer relations between the project team, the supply chain and the client, is long overdue; however, despite some signs of growth in this area, the industry nonetheless remains fragmented in its

approach. The role of the project manager is to integrate diverse interests and unify objectives to achieve a common goal. This has now broadened to include a responsibility, on the parts of both client and team, to ensure that construction addresses current and future societal needs. From an economic perspective, a great deal of waste is connected with conflict, thus a holistic approach that increases the efficiency and effectiveness of the task at hand will inject energy into project management. This third edition now takes on board the impact of technology in building information modelling and other digitised technologies such as artificial

intelligence. Together, they open up avenues for more direct and incisive action to test creative design, manufacture directly and communicate spontaneously and intuitively. In time, such technologies will change the role of project managers but will never take away their responsibility to be passionate about construction and to integrate the team. A new chapter has been added that considers future societal needs. This edition is also reordered to make the project life cycle and process chapters clearer. This book combines best practice in construction with the theories underpinning project management and presents a wealth of practical case studies – many new. It

focuses on all construction disciplines that may manage projects. The book is of unique value to students in the later years of undergraduate courses and those on specialist postgraduate courses in project management and also for practitioners in all disciplines and clients who have experienced the frustration caused by the fragmentation of construction projects.
