Since the initial publication of this classic text, motivational interviewing (MI) has been used by countless clinicians in diverse settings. Theory and methods have evolved apace, reflecting new knowledge on the process of behavior change, a growing body of outcome research, and the development of new applications within and beyond the addictions field. Including 25 nearly all-new chapters, this revised and expanded second edition now brings MI practitioners and trainees fully up to date. William R. Miller and Stephen Rollnick explain how to work through ambivalence to facilitate change, present detailed guidelines for using their approach with a variety of clinical populations, and reflect on the process of learning MI. Chapters contributed by other leading experts then address such special topics as MI and the stages-of-change model; using the approach with

groups, couples, and adolescents; and applications to general medical care, health promotion, and criminal justice settings.

This book provides a comprehensive overview of improving critical care survivorship. Comprised of four sections, the text presents interventions that can be used to improve patient outcomes and reduce the burden of post-intensive care syndrome across the arc of care, from the ICU to returning home. The first section of the text focuses on preventing adverse outcomes in the ICU, with an

emphasis on implementing early mobilization, engaging and supporting families, and employing various forms of therapy. The second section revolves around enhancing recovery post-ICU, focusing on physical and neurocognitive rehabilitation programs, peer support, and poly-pharmacy management. Community reintegration is the subject of the third section, with emphasis on socioeconomic reintegration, healthcare utilization, and volunteerism in ICU recovery. The book concludes with a section on future considerations, specifically spotlighting preliminary ideas that address long-term sequelae and international collaboration to solve critical care challenges. Written by experts in the field, *Improving Critical Care Survivorship: A Guide for Prevention, Recovery, and Reintegration* is a valuable resource for critical care clinicians and researchers interested in improving the quality of patient survival after ICU admission.

Many scientists and engineers consider themselves poor writers or find the writing process difficult. The good news is that you do not have to be a talented writer to produce a good scientific paper, but you do have to be a careful writer. In particular, writing for a peer-reviewed scientific or engineering journal requires learning and executing a specific formula for presenting scientific work. This book is all about teaching the style and conventions of writing for a peer-reviewed scientific journal. From structure to style, titles to tables,

abstracts to author lists, this book gives practical advice about the process of writing a paper and getting it published.

This collection of essays provides a profound insight into today's discussion of feminist positions among female Spanish scholars. The focus is placed on the social and political achievements that feminism has attained since the transition to democracy in Spain. It outlines the radical changes of the image of women. Above all, however, this reader illustrates the extent of academic research on issues of gender, which has become increasingly differentiated over the last 30 years. This book is a tremendous example of the dramatic development of feminism and the new status of women in Spain. Book jacket.

Introduction to Geomorphology

Springer-Verlag

The healthcare systems of Western

States are characterised by complex structures and diverse activities. The authors investigate the conflicts of various professions within the medical market from a historical perspective, thereby reaching a better understanding of contemporary questions and problems concerning the field of medical care. The focus lies on analysing the establishment of non-physician health professions in their social framework as well as their profession-specific developments. The contributions outline and explore the conflicts within one professional group as well as those between different professional groups. This volume not only examines the history of nursing, but also the history of other non-physician professions such as midwives, diabetes advisors and paramedics. The authors are particularly interested in investigating which player had interpretational sovereignty on the medical market, the social prestige of different health professions, and the profession-specific practices.

Energy on the skin has revolutionized medicine: in the last 25 years laser and IPL devices have made completely new medical treatment concepts possible,

with considerable therapeutic success. The rapid technical advances in energy-based instruments require continuous training for attending physicians. This book presents all the available energy-based systems for the treatment of cutaneous diseases, including a wide range of laser applications, IPL and energy-based devices such as the lightning lamp-pumped pulsed dye laser, solid state lasers like neodymium-doped yttrium aluminum garnet (Nd YAG) laser, quality switched ruby laser, erbium-doped yttrium aluminum garnet laser (YAG) and CO2 laser, as well as radio frequency and high-intensity focused ultra sound, photodynamic therapy and more. The translation was done with the help of artificial intelligence (machine translation by the service DeepL.com) and a subsequent human revision by original chapter authors, editor and publisher was performed to fine-tune and update the content. After discussing the history of the laser, the first part of the book focuses on laser therapy in dermatology and aesthetic medicine, including side effects, complications and treatment errors. It also examines the qualitative standards and legal aspects, from therapists' qualifications to patient education and the maintenance of the equipment. In addition, it addresses safe and effective energy applications for hemangiomas, skin cancer precursors and rosacea. The book also features chapters on patient preparation, medical history and photographic follow up, as well as skin analysis, cooling techniques, light protection and the maintenance of laser devices. Further, it discusses cosmetic topics such as tattoo removal, photo hair removal, scars and stretch marks, hair transplant, body contouring, hyperhidrosis, and aesthetic plasma medicine. Written by leading

international experts, each contribution includes suggestions for further reading, making the book a valuable resource for beginners and experts alike. At the same time, its easy-to-follow, didactic style means that it is also suitable for university courses and seminars.

Personal McGraw Hill Professional
Many consider the nature of human consciousness to be one of the last great unsolved mysteries. Why should the light turn on, so to speak, in human beings at all? And how is the electrical storm of neurons under our skull connected with our consciousness? Is the self only our brain's user interface, a kind of stage on which a show is performed that we cannot freely direct? In this book, philosopher Markus Gabriel challenges an increasing trend in the sciences towards neurocentrism, a notion which rests on the assumption that the self is identical to the brain. Gabriel raises serious doubts as to whether we can know ourselves in this way. In a sharp critique of this approach, he presents a new defense of the free will and provides a timely introduction to philosophical thought about the self – all with verve, humor, and surprising insights. Gabriel criticizes the scientific image of the world and takes us on an eclectic journey of self-reflection by way of such concepts as self, consciousness, and freedom, with the aid of Kant, Schopenhauer, and Nagel but also Dr. Who, The Walking Dead, and Fargo.
