My thoughts about the Hemolytic Uremic Syndrome (HUS) got started in 1961 along with my attempt to return to Argentina. As I sought my way in Buenos Aires, I visited Carlos Gianantonio whom I had met in Caracas the year before during the Pan American pediatric meetings. At that time he was actively working on HUS which had become an epidemic in Buenos Aires and other parts of Argentina. I was impressed by the team effort and devotion of his group to such heavy demands. They obviously were meeting the challenge at an amazingly high level under a very crippling physical situation with shortages of space, laboratories and equipment. His group together with Dr. Becu, at the time the pathologist at the Children's Hospital of Buenos Aires (we had met through his mother who was instrumental in arranging my return to Buenos Aires), wrote some of the classic papers on HUS. Through the years as Dr. Gianantonio became more involved in general pediatrics, the administrative aspects and its orientation in Latin America, he became known for his deep philosophical questions as to what we are doing and where we are going. His questions have obvious implications regarding an aggressive approach to our pediatric nephrology patients.

The world community of pediatric nephrologists has grown to a great number of active members. A number of them are interested in problems of renal insufficiency and kidney replacement therapy. Therefore, many vital meetings concerning this vibrant speciality have been included in international pediatric congresses. But the discussion of ten-minutes-papers in a large auditorium was often limited, criticism tended to be muted, lively discussions have only occasionally succeeded for the reason that the topics have tended to be too specialized for the audiences in relation to the large number of other discussions about questions and results in pediatric science. In Cologne, therefore, we decided to hold a conference concerning problems, advances and controversies in renal insufficiency in children, which would have a limited but general audience in rooms of a modest size, topics that tended to polarize a world-wide faculty of experts who liked their basic views to be opposed. The session would be chaired by persons well-known for inciting discussion and even difficult questions in order to stimulate a vital debate between delegates and audiences. One important part of the meeting was therefore the discussion in an open and familiar way as it is known in other workshops. We called the conference "Kalner Kinderdialyse-Symposium". The first conference was held in November 1975, and evoked an extra ordinary enthusiastic response from both audiences and delegates, so we held a second one in 1978 and the third meeting was in 1981.

This new clinical resource brings you a state-of-the-art comprehensive review on every clinical condition encountered in pediatric nephrology in one concise, clinically focused text. International experts provide you with the latest on epidemiology, diagnosis, investigations, management, and prognosis for a full range of pediatric kidney disorders. A full-color, highly visual, meticulously crafted format, makes this material remarkably easy for you to access and apply. Comprehensive Pediatric Nephrology also serves as an ideal resource for board review study for the ABP subspecialty boards in pediatric nephrology. Just the right amount of "need-to-know" basic science coupled with practical clinical guidance for every disorder helps you make efficient, informed decisions. The book provides a much needed update on the genetic origins of pediatric kidney disorders. Chapters about glomerulonephritis, nephrotic syndrome, and tubular disorders provide an orientation in the pathophysiology, differential diagnosis, and treatment of these heterogeneous disease entities. Disease specific chapters include diagnostic work-up, laboratory evaluation, and management of disorders and complications, making this necessary information readily accessible. The prevention and management of pediatric chronic renal failure and its complications are comprehensively covered in many detailed chapters. Four chapters devoted to childhood hypertension offer you insights into an increasingly prevalent condition among pediatric patients so you can treat them more effectively. A chapter on the role of the interventional radiologist in pediatric nephrology keeps you apprised of the latest advances in a key area in the field. The function of complementary and alternative medicine in patients with renal disease is reviewed for the first time in a standard pediatric nephrology textbook. A consistent organization throughout and a full-color layout lets you find diagnostic guidance quickly.

The thrust here is for those who want to know more than the answer to an exam question - an approach to disease diagnosis and treatment which emphasizes thoughtful consideration of alternatives, finding ones way through uncertainties and lack of knowledge. The annual seminar on which this volume is based has evolved into a forum for open discussion of puzzling questions - actually old questions in the light of new data. To me, the adventure of life is in recognizing the openendedness of all things. So you thought that a certain disease was a settled question? In medicine a "settled" question is a transient conclusion. Even the solutions to the so-called simplest problems have another side. Our aim this year was to air out concepts and conclusions about hypertension, fluid-electrolytes, and tubulopathies. The stars were Drs. Juan Rodriguez-Soriano, Alan Gruskin, and Donald Potter, along with Drs. Gustavo Gordillo, Ronald Kallen, and Antonia Novello as guest faculty. Local stars included Drs. Mary Jane Jesse, Jacques Bourgoignie, and Carlos Vaamonde. Their contributions added to those of the other faculty and registrants, coalesced into vibrant exchanges which are reproduced here for the reader's perusal.

The purpose of this volume and Pediatric Nephrology Seminar IX from which it was created is to provide easy access to current concepts in the diagnosis and management of kidney diseases in the newborn. Complimentary to this purpose is the opportunity the Seminar structure gives me to invite those particularly interested in the subject chosen to come together, share experiences and ideas in an unhurried, unpressured atmosphere for four continuous days - an oasis for me and, I am told, also for the faculty and registrants. This year's subject choice is an expression of my perennial interest in the kidney of the newborn. A step back to view the steps forward reveals unwittingly intertwined associations and actions which now fall into focus. When I was just beginning my pediatric nephrology training with Sol Kaplan at Downstate in Brooklyn, we discussed Bob Usher's pioneering thought that there was something wrong with the kidneys of babies with RDS. Without really knowing what needed to be done, I started looking at the kidneys

of those babies. Subsequently, Dick Day who was Chairman of the Department of Pediatrics there, stopped me in the hall, and asked me to come into his office. Glowing in quiet introspection, he extolled the joy of working with one's hands, then hurried away to his laboratory. He had been the Director of the Newborn Nursery at Babies Hospital before coming to Downstate, and (as I later found out) was trying to do something with oxygen electrodes.

Nephrology Subject eBook PDF For Medical Students & Doctors Springer Science & Business Media Edited by the same team that developed the successful Pediatric Dialysis and its second edition, this text features clinical management principles that are integral to the care of children receiving chronic dialysis. Each chapter is introduced by a case presentation that serves as the basis for key learning points that are clinically applicable and presented in a succinct manner. The topics included in Pediatric Dialysis Case Studies cover virtually all aspects of pediatric dialysis care and represent the efforts of an international group of experts with firsthand clinical expertise from all disciplines represented in the pediatric dialysis team. This resource is certain to help the clinician achieve improved outcomes for these often complex patients.
