The Fifth Edition has been substantially restructured. All but two of the authors are new, reflecting the fast-changing and emerging perspectives on projects and their management. The four sections in the book describe: ¶ Projects, their context, value and how they are connected to organizational strategy; ¶ Performance: describing how to manage the delivery of the project, covering scope, quality, cost, time, resources, risk and sustainability ¶ Process: from start up to close down ¶ Portfolio: the project and its relationship to the organization The discrete nature of each chapter makes this Handbook a wonderful source of advice and background theory that is easy to consult. Introduction to International Health and Safety at Work Jones & Bartlett Publishers

Health promotion and protection for all citizens and health care for patients represent some of the most important policy challenges worldwide. Virtually every single area of life-professional productivity, cultural creativity, political and social participation, and citizens' quality of life-is influenced by the state of health at the individual and at the population level. But are current forms of health governance and health care services sufficient to overcome inequalities, ensure health security, harness technological developments, and cover future needs? The Governance Report 2019 focuses on health governance and the models and strategies used to make health policy an integral part of modern social policy and meet growing challenges. Health governance involves state, market, non-governmental, professional, and individual actors often working across sectors and depends on interactions at multiple levels-from local clinics to global forums. The Report traces the development of health governance institutions and actors, examines factors influencing the health-related decisions of individuals and policy-makers alike, highlights innovations both at international level and at the intersection between individuals and professionals, and offers recommendations to ensure that health care and health policy are governed to meet future challenges.
