Object-oriented Analysis and Design with Applications John Wiley & Sons

"The topic of multimedia is speedily becoming an essential in computer science and engineering prospectuses, exclusively now that multimedia touches most facets of these fields. Multimedia was originally seen as an upright application area; that is, a niche application with approaches that belong only to itself. However, like pervasive computing, multimedia is now principally a parallel application area and forms an imperative component of the study of computer graphics, image processing, databases, real-time systems, operating systems, information retrieval, computer networks, computer vision, and so on. Multimedia is no longer just a toy but forms part of the technological environment in which we work and think. This book fills the need for a College & university-level text that examines a good deal of the central outline computer science sees as belonging to this subject area. Multimedia has become allied with a certain set of issues in computer science and engineering, and we address those here. The book is not an introduction to simple design issues—it serves a more progressive audience than that. On the other hand, it is not a reference work — it is more a traditional textbook. While we inevitably discuss multimedia tools, we would like to give a sense of the underlying ideologies in the tasks those tools carry out. Students who undertake and succeed in a course based on this text can be said to really understand fundamental matters in regard to this material; hence the title of the text. In conjunction with this text, a fullfledged course should also allow students to make use of this knowledge to carry out interesting or even wonderful practical projects in multimedia, interactive projects

that engage and sometimes amuse and, perhaps, even teach these same concepts. The book Multimedia & Computing comprehends five chapters for skill development course of B.A/B.Sc/ BCA Semester 5th according to the syllabus of University of Jammu, which inculcates theoretical & practical portions."
