Kidnapped and sold into slavery in the American South, freeman Solomon Northup spent twelve years in bondage before being freed. Twelve Years a Slave is Northup's moving memoir, revealing unimaginable details of the horrors he faced as a slave on Southern plantations, and his unshakable belief that he would return home to his family. Written in the year after Northup was freed and published in the wake of Harriet Beecher Stowe's Uncle Tom's Cabin, Northup's story was quickly taken up by abolitionist groups and news organizations as part of the fight against slavery, and continues to resonate more than a century after the end of the American Civil War.

This biography of America's first African American naval aviator is a "compelling portrait of a quiet hero [and] the racial climate between 1926 and 1959" (Booklist). "In the late 1940s, when every aspiring black pilot had heard of the army's Tuskegee program, Jesse Leroy Brown set his sights on becoming a navy

aviator. An outstanding student and top athlete, the 17-year-old's ambition was met with a combination of incredulity and resistance. Yet, at a time when Jim Crow laws were rampant, Brown managed to break the color barrier to become the first black U.S. Navy pilot. Taylor puts his considerable narrative skills to good use in tracing Brown's path from his youth in poverty-stricken Palmer's Crossing, Miss., to his eventual induction into the heady and dangerous world of carrier aviation. Taylor based much of his research on interviews with those who knew Brown and on personal letters from more than a half-century ago [and] doesn't skimp on the indignities Brown suffered. . . . An engaging and intimate glimpse of a young pioneer who desperately wanted to earn his aviator's wings." —Publishers Weekly
 "More than a biography, this is a thrilling story of naval aviation and combat."

Unorthodox Strategies for the Everyday Warrior Motorbooks

Eminent physicist and economist, Robert Ayres, examines the history of technology as a change agent in society, focusing on societal roots rather than technology as an

autonomous, self-perpetuating phenomenon. With rare exceptions, technology is developed in response to societal needs that have evolutionary roots and causes. In our genus Homo, language evolved in response to a need for our ancestors to communicate, both in the moment, and to posterity. A band of hunters had no chance in competition with predators that were larger and faster without this type of organization, which eventually gave birth to writing and music. The steam engine did not leap fully formed from the brain of James Watt. It evolved from a need to pump water out of coal mines, driven by a need to burn coal instead of firewood, in turn due to deforestation. Later, the steam engine made machines and mechanization possible. Even quite simple machines increased human productivity by a factor of hundreds, if not thousands. That was the Industrial Revolution. If we count electricity and the automobile as a second industrial revolution, and the digital computer as the beginning of a third, the world is now on the cusp of a fourth revolution led by microbiology. These industrial revolutions have benefited many

in the short term, but devastated the Earth's ecosystems. Can technology save the human race from the catastrophic consequences of its past success? That is the question this book will try to answer.

As mainstream music consumers wait with baited breath for the next musical upheaval, a small core of tech-savvy individuals are re-shaping the aural landscape without the assurance of being part of any larger movement. Their ideologies and creative approaches differ wildly, but they share a desire to take sound beyond the realm of mere entertainment. Drawing on extensive research into the world of audio extremity, *Micro-Bionic* includes interviews with William Bennett (Whitehouse), Peter Rehberg (Mego) and Peter Christopherson (Throbbing Gristle/Coil).

Oil is one of the world's most important commodities, but few people know how its extraction affects the residents of petroleum-producing regions. In the 1960s, the Texaco corporation discovered crude in the territory of Ecuador's indigenous Cofán nation. Within a decade, Ecuador had become a member of OPEC, and the Cofán watched as their forests fell, their rivers ran black, and their bodies succumbed to new illnesses. In 1993, they became plaintiffs in a multibillion-dollar lawsuit that aims to compensate them for

the losses they have suffered. Yet even in the midst of a tragic toxic disaster, the Cofán have refused to be destroyed. While seeking reparations for oil's assault on their lives, they remain committed to the survival of their language, culture, and rainforest homeland. *Life in Oil* presents the compelling, nuanced story of how the Cofán manage to endure at the center of Ecuadorian petroleum extraction. Michael L. Cepek has lived and worked with Cofán people for more than twenty years. In this highly accessible book, he goes well beyond popular and academic accounts of their suffering to share the largely unknown stories that Cofán people themselves create—the ones they tell in their own language, in their own communities, and to one another and the few outsiders they know and trust. Their words reveal that life in oil is a form of slow, confusing violence for some of the earth's most marginalized, yet resilient, inhabitants.
