Frederik Drescher addresses the timing of non-mandatory insolvency filings based on threatening illiquidity (§ 18 InsO) with the aim of a company's

restructuring as an agency problem between owners and management. The hypothesis of a tendency towards delayed insolvency filings, which was developed using a decision model, is experimentally confirmed. Moreover, the author analyzes different incentive instruments potentially leading to earlier insolvency filings.

Naturally aspirated Mopar Wedge big-blocks are quite capable of producing between 600 to 900 horsepower. This book covers how to build Mopar's 383-, 400-, 413-ci, 440-ci engines to these power levels. Discussed is how to select a stock or aftermarket block for the desired performance level. The reciprocating assembly is examined in detail, so you select the right design and material for durability and performance requirements. Cylinder heads and valve train configurations are crucial for generating maximum horsepower and torque and this volume provides special treatment in this area. Camshafts and lifters are

compared and contrasted using hydraulic flat tappet, hydraulic roller and solid flat tappet cams. Also, detailed engine builds at 600, 700, 800, and 900 horsepower levels provide insight and reveal what can be done with real-world component packages.

The perfect crime - it's a work of art, in Frank Cottrell Boyce's ingenious story, Framed. Dylan is the only boy living in the tiny Welsh town of Manod. His parents run the Snowdonia Oasis Auto Marvel garage - and when he's not trying to persuade his sisters to play football, Dylan is in charge of the petrol log. And that means he gets to keep track of everyone coming in and out of Manod - what car they drive, what they're called, even their favourite flavour of crisps. But when a mysterious convoy of lorries trundles up the misty mountainside towards an old, disused mine, even Dylan is confounded. Who are these people - and what have they got to

hide? A story inspired by a press cutting describing how, during World War II, the treasured contents of London's National Gallery were stored in Welsh slate mines. Once a month, a morale-boosting masterpiece would be unveiled in the village and then returned to London for viewing. This is a funny and touching exploration of how art – its beauty and its value – touches the life of one little boy and his big family in a very small town. This edition of Framed includes bonus material and discussion questions from Frank Cottrell Boyce, and illustrations by Steven Lenton.

When the war ended on August 15, 1945, I was a naval engineering cadet at the Kure Navy Yard near Hiroshima, Japan. A week later, I was demobilized and returned to my home

in Tokyo, fortunate not to find it ravaged by firebombing. At the beginning of September, a large contingent of the American occupation forces led by General Douglas MacArthur moved its base from Yokohama to Tokyo. Near my home I watched a procession of American military motor vehicles snaking along Highway 1. This truly awe-inspiring cavalcade included jeeps, two-and-a-half-ton trucks, and enormous trailers mounted with tanks and artillery. At the time, I was a 21-year-old student in the Machinery Section of Engineering at the Tokyo Imperial University. Watching that magnificent parade of military vehicles, I was more

than impressed by the gap in industrial strength between Japan and the U. S. That realization led me to devote my whole life to the development of the Japanese auto industry. I wrote a small article concerning this incident in Nikkei Sangyo Shimbun (one of the leading business newspapers in Japan) on May 2, 1983. The English translation of this story was carried in the July 3, 1983 edition of the Topeka Capital-Journal and the September 13, 1983 issue of the Asian Wall Street Journal. The Topeka Capital-Journal headline read, "MacArthur's Jeeps Were the Toyota Catalyst. **(nature's Miracle Science)** S. Chand Publishing

Cadillac seemed preposterous. But Lexus' first sedan shocked the world. The result of hundreds of prototypes, the work of more than 1,000 engineers, and some \$1 billion, the Lexus LS 400 pioneered new ground. Within just a few years, Lexus had transformed itself from an unlikely outsider into one of the industry's leaders as it redefined the idea of the luxury vehicle while also building a dealer network that gave unprecedented attention to service. The Lexus Story describes the brand's rapid ascent-and its travails along the way. The Lexus Story is the first journalistic telling of the history of this extraordinary company. And it is the only account afforded

full access to the designers, engineers, dealers, and company leaders who molded the cars and the brand. The Lexus Story takes readers deep inside the making of first-class automobiles, from the creative sparks kindled in Lexus' far-flung design studios to the engineering refinements that translate ideals of performance and luxury into steel, glass, and rubber. Designed to be both readable and visually welcoming with more than 200 full-color photographs, The Lexus Story is a compelling history of a world-class brand. Everything you've always wanted to know about self-driving cars, Netflix recommendations, IBM's Watson, and video game-playing computer programs. The future is here: Self-driving cars are on the streets, an algorithm gives you movie and TV recommendations, IBM's Watson triumphed on Jeopardy over puny human brains, computer programs can be trained to play Atari games. But how do all these things work? In this book, Sean Gerrish offers an engaging and accessible overview of

the breakthroughs in artificial intelligence and machine learning that have made today's machines so smart. Gerrish outlines some of the key ideas that enable intelligent machines to perceive and interact with the world. He describes the software architecture that allows self-driving cars to stay on the road and to navigate crowded urban environments; the million-dollar Netflix competition for a better recommendation engine (which had an unexpected ending); and how programmers trained computers to perform certain behaviors by offering them treats, as if they were training a dog. He explains how artificial neural networks enable computers to perceive

the world—and to play Atari video games better than humans. He explains Watson's famous victory on Jeopardy, and he looks at how computers play games, describing AlphaGo and Deep Blue, which beat reigning world champions at the strategy games of Go and chess. Computers have not yet mastered everything, however; Gerrish outlines the difficulties in creating intelligent agents that can successfully play video games like StarCraft that have evaded solution—at least for now. Gerrish weaves the stories behind these breakthroughs into the narrative, introducing readers to many of the researchers involved, and keeping technical details to a minimum.

Science and technology buffs will find this book an essential guide to a future in which machines can outsmart people.

In the context of growing public interest in sustainability, Corporate Social Responsibility (CSR) has not brought about the expected improvement in terms of sustainable

business. Self-regulation has been unable to provide appropriate answers for unsustainable business frameworks, despite empirical proof that sustainable behaviour is entirely in corporate enlightened self-interest. The lack of success of the soft law approach suggests that hard law regulation may be needed after all. This book discusses these options, alongside the issue of shareholder primacy and its externalities in corporate, social, and natural environment. To escape the "prisoner's dilemma" European corporations and their global counterparts have found themselves in, help is needed in the form of EU hard law to advocate sustainability

through mandatory rules. This book argues that the necessity of these laws is based on the first-mover's advantage of such corporate law approach towards sustainable development. In the current EU law environment, where codification of corporate law is sought for, forming and defining a general EU policy could not only help corporations embrace this self-enlightened behaviour but could also build the necessary "EU corporate citizenship" atmosphere. Considering the developments in the field of CSR as attempts to mitigate negative externalities resulting from inappropriate shareholder primacy

use, the book is centred around a discussion of the shareholder primacy paradigm, its legal position and its (un)suitability for modern global business. Going beyond solely legal analysis, juxtaposing legal principles and argumentation with economic theoretic approaches and, more importantly, real-life examples, this book is accessible to both professionals and academics working within the fields of business, economics, corporate governance and corporate law.
