From the physician behind the wildly popular NutritionFacts website, *How Not to Die* reveals the groundbreaking scientific evidence behind the only diet that can prevent and reverse many of the causes of disease-related death. The vast majority of premature deaths can be prevented through simple changes in diet and lifestyle. In *How Not to Die*, Dr. Michael Greger, the internationally-renowned nutrition expert, physician, and founder of NutritionFacts.org, examines the fifteen top causes of premature death in America—heart disease, various cancers, diabetes, Parkinson's, high blood pressure, and more—and explains how nutritional and lifestyle interventions can sometimes trump prescription pills and other pharmaceutical and surgical approaches, freeing us to live healthier lives. The simple truth is that most doctors are good at treating acute illnesses but bad at preventing chronic disease. The fifteen leading causes of death claim the lives of 1.6 million Americans annually. This doesn't have to be the case. By following Dr. Greger's advice, all of it backed up by strong scientific evidence, you will learn which

foods to eat and which lifestyle changes to make to live longer. History of prostate cancer in your family? Put down that glass of milk and add flaxseed to your diet whenever you can. Have high blood pressure? Hibiscus tea can work better than a leading hypertensive drug—and without the side effects. Fighting off liver disease? Drinking coffee can reduce liver inflammation. Battling breast cancer? Consuming soy is associated with prolonged survival. Worried about heart disease (the number 1 killer in the United States)? Switch to a whole-food, plant-based diet, which has been repeatedly shown not just to prevent the disease but often stop it in its tracks. In addition to showing what to eat to help treat the top fifteen causes of death, *How Not to Die* includes Dr. Greger's Daily Dozen—a checklist of the twelve foods we should consume every day. Full of practical, actionable advice and surprising, cutting edge nutritional science, these doctor's orders are just what we need to live longer, healthier lives.

#### **The Vitamin D Cure, Revised** Penguin

Page Title Modern medicine has done much in the field of acute conditions such as trauma, infections, burn, and bone fractures, but it has limited success in treating chronic diseases, such as Alzheimer's, Parkinson's, cancer, and diabetes among others. At present, the root causes of most chronic diseases are still unknown, and the drugs developed by pharmaceutical companies to treat chronic diseases actually treat only the symptoms rather than causes. According to Dr. Monte Lai, a nutrient deficient diet and unhealthy lifestyle are by far the two most important environmental factors associated with the causes of a host of

chronic diseases. The Vitamin Cure provides a comprehensive overview of how vitamin and essential element therapies are the key to treating and preventing many of the chronic conditions. While the internet is chock full of health related information about vitamins and essential elements, it is difficult to sort through all available information to build a reliable knowledge base to improve health. The aim of this book is to provide readers with easily accessible evidence-based knowledge about vitamins and essential elements for prevention and treatment of chronic diseases. The Vitamin Cure relies on a statistical method known as meta-analysis (combining data from multiple studies) that is currently the most reliable method for assessing the efficacy of vitamins or essential elements in preventing or treating chronic diseases. The Vitamin Cure brings clinically proven remedies to light for any reader looking to improve overall health and prevent debilitating disease. This book contains five parts. Part one contains a brief history of the discovery of each of the thirteen essential vitamins, namely, vitamin A, vitamin B1, vitamin B2, vitamin B3, vitamin B5, vitamin B6, vitamin B7, vitamin B9, vitamin B12, vitamin C, vitamin D, vitamin E, and vitamin K. It also presents meta-analytic evidence of the efficacy of each vitamin in prevention and treatment of diseases, its

recommended daily allowance and best food sources. Part two covers essential elements, including the five essential elements, i.e., calcium, potassium, sodium, magnesium and phosphorous, and the eight essential trace elements, i.e., iron, zinc, manganese, copper, molybdenum, iodine, chromium and selenium. It also presents meta-analytic evidence of the efficacy of each essential element in prevention and treatment of diseases, its recommended daily allowance and best food sources. Part three explains important secrets for staying healthy. These include explanation of how sugar makes you fat, why patients with autoimmune diseases should not eat meat, and how exercise benefits the brain? Part four provides meta-analysis evidence of which vitamins and essential elements should be taken to prevent and/or treat seventy-five chronic diseases and conditions. These seventy-five chronic diseases and conditions include lung cancer, breast cancer, colorectal cancer, prostate cancer, endometrial cancer, blood cancer, bladder cancer, glioma, diabetes, stroke, heart disease, cataracts, hypertension, Alzheimer's disease, osteoporosis, arthritis, hepatitis C, fatty liver disease, Parkinson's disease, sleep apnea, and others. Part five summarizes clinically proven remedies for preventing and treating the seventy-five chronic diseases and conditions presented in Part four.
