This book is an exploration of tools and mathematics and issues in mathematics education related to tool use. The book has five parts. The first part reflects on doing a mathematical task with different tools, followed by a mathematician's account of tool use in his work. The second considers prehistory and history: tools in the development from ape to human; tools and mathematics in the ancient world; tools for calculating; and tools in mathematics instruction. The third part opens with a broad review of technology and intellectual trends, circa 1970, and continues with three case studies of approaches in mathematics education and the place of tools in these approaches. The fourth part considers issues related to mathematics instructions: curriculum, assessment and policy; the calculator debate; mathematics in the real world; and teachers' use of technology. The final part looks to the future: task and tool design and new forms of activity via connectivity and computer games.

Fruit de deux ans et demi d'enquête sur le terrain, au Togo, l'ouvrage de David Guyot constitue la première contribution à une sociologie du métissage en Afrique. Mais l'intérêt de ce travail semble se situer au-delà du seul champ africaniste, en ce sens qu'il est peut-être avant tout une réflexion sociologique sur l'apparence corporelle : comment se construit la connaissance que nous avons des autres à travers en particulier la perception de l'identité corporelle. L'auteur s'aventure ainsi pas à pas sur ce terrain, rarement abordé en sociologie, des rapports complexes qui existent entre la culture et le biologique, entre la pensée et le corps, en évitant les écueils d'une théorie culturaliste. S'appuyant sur une méthodologie quantitative complexe, mais aussi sur une grande sensibilité interactionniste dont les références passent élégamment de Goffmann à Bourdieu, l'analyse invite ainsi le lecteur, au fil des pages, tant à déconstruire l'image convenue du métissage qu'à réfléchir à ce que l'auteur appelle le " racisme ordinaire ", celui, non nécessairement dramatisé, qui pourrait se trouver au fondement même de toutes les identités.

This book is unique. It gathers texts which give the best presentation of the principles and key concepts of the Theory of Didactical Situations that Guy Brousseau developed in the period from 1970 to 1990. These texts provide a comprehensive presentation of the Theory. In order to facilitate the reading of certain points footnotes have been added, as well as preludes and interludes to place in context the chosen texts and clarify the construction of the book.

The Postmodern Condition Editions l'Etudiant

Et si on ralentissait ?! Pourquoi nos sociétés recherchent-elles toujours plus de croissance ? Pourquoi, alors même que nous avons de plus en plus d'outils pour "gagner du temps", avons-nous de plus en plus l'impression d'en manquer ? Peut-on vivre sereinement dans un monde chronophage ? Ancien trader devenu instituteur, Gilles Vernet s'interroge sur l'accélération vertigineuse de notre monde. Fort de son expérience, il propose des clés pour lever le pied en douceur, alterner les rythmes et revenir à l'essentiel. Des témoignages d'experts qui pensent le monde de demain et d'élèves qui posent un regard lucide sur notre course contre le temps font écho à sa réflexion. Des outils aident chacun à dégager ses aspirations profondes et à apprivoiser le temps, clé de l'épanouissement et du recentrage. Ce livre nous invite à réfléchir, collectivement et individuellement, au monde dans lequel nous voulons vivre. Avec une préface de Nicolas Hulot

The Niger River Basin, home to 100 million people, is a vital yet complex asset for West and Central Africa. It is the continent's third largest river basin, traversing nine countries -Benin, Burkina Faso, Cameroon, Chad, Côte d'Ivoire, Guinea, Mali, Niger, and Nigeria. The River embodies both these nations' livelihoods and their geopolitics. It is not simply water but rather an origin of identity, a route for migration and commerce, a source of conflict, and a catalyst for cooperation. Cooperation among decision-makers and users is crucial to address the threats to water resources. The Niger.

Pour quelles études êtes-vous fait ? Editions Ellipses

"The aim of this study is to track De Rerum Natura along two paths of satire. One is the broad boulevard of satiric literature from the beginnings of Greek poetry to the plays, essays, and broadcast media of the modern world. The other is the narrower lane of Roman verse satire, satura, whose canon begins in the Middle Republic with Ennius and Lucilius and closes with Juvenal, an author of the Flavian era. The first main portion of this book (chapters 2-3) focuses on Lucretius and Roman satura, while the following chapters broaden the scope to satiric elements of Lucretius more generally, but still with plenty of reference to the poets of Roman satura as satirists par excellence. By examining how Lucretius' poem employs the tools, techniques, and tactics of satire-by evaluating how and where in De Rerum Natura the speaker functions as a satirist-we gain, I argue, a fuller, richer understanding of how the poem works and how its poetry interacts with its purported philosophical program. Attention to the role of De Rerum Natura in the more specific tradition of Roman verse satire demonstrates that Lucretius' poem stands as a detour on the genre's highway, a swerve in the trajectory of satura. The numerous satiric passages and frequently satiric narrator of

De Rerum Natura draw on earlier Roman satire, and in turn the poem influences the later satiric verse of Horace, Persius, and Juvenal. While De Rerum Natura is not in and of itself a member of the Roman genre of satire, it is an important player in the genre's development"--

The Tower of Hanoi - Myths and Maths Cambridge University Press

Based on the 1987 International Commission on Mathematical Instruction conference, this volume comprises key papers on the role of mathematics in applied subjects.

Livres hebdo Springer Science & Business Media

This is the first comprehensive monograph on the mathematical theory of the solitaire game "The Tower of Hanoi" which was invented in the 19th century by the French number theorist Édouard Lucas. The book comprises a survey of the historical development from the game's predecessors up to recent research in mathematics and applications in computer science and psychology. Apart from long-standing myths it contains a thorough, largely self-contained presentation of the essential mathematical facts with complete proofs, including also unpublished material. The main objects of research today are the so-called Hanoi graphs and the related Sierpiński graphs. Acknowledging the great popularity of the topic in computer science, algorithms and their correctness proofs form an essential part of the book. In view of the most important practical applications of the Tower of Hanoi and its variants, namely in physics, network theory, and cognitive (neuro)psychology, other related structures and puzzles like, e.g., the "Tower of London", are addressed. Numerous captivating integer sequences arise along the way, but also many open questions impose themselves. Central among these is the famed Frame-Stewart conjecture. Despite many attempts to decide it and large-scale numerical experiments supporting its truth, it remains unsettled after more than 70 years and thus demonstrates the timeliness of the topic. Enriched with elaborate illustrations, connections to other puzzles and challenges for the reader in the form of (solved) exercises as well as problems for further exploration, this book is enjoyable reading for students, educators, game enthusiasts and researchers alike.

According to the great mathematician Paul Erdős, God maintains perfect mathematical proofs in The Book. This book presents the authors candidates for such "perfect proofs," those which contain brilliant ideas, clever connections, and wonderful observations, bringing new insight and surprising perspectives to problems from number theory, geometry, analysis, combinatorics, and graph theory. As a result, this book will be fun reading for anyone with an interest in mathematics.

Overcoming Barriers to Student Understanding Verso

Ce rapport du Haut conseil en éducation artistique et culturelle fait le point sur la mise en oeuvre d'un enseignement d'histoire des arts et sur la reconnaissance de la place de l'art dans l'éducation française. L'ouvrage aborde la question de l'image, de la danse, de la photographie, de la musique, des jeux vidéo, de la formation initiale et continue des enseignants en histoire de l'art, etc.

Grand Usuel Larousse Springer Science & Business Media

It has long been a matter of concern to teachers in higher education why certain students 'get stuck' at particular points in the curriculum whilst others grasp concepts with comparative ease. What accounts for this variation in student performance and, more importantly, how can teachers change their teaching and courses to help students overcome such barriers? This book examines the difficulties of student learning and offers advice on how to overcome them through course design, assessment practice and teaching methods. It also provides innovative case material from a wide range of institutions and disciplines, including the social sciences, the humanities, the sciences and economics.
