Industries*

Vintage

From the visionary bestselling author of *The Second World and How to Run the World* comes a bracing and authoritative guide to a future shaped less by national borders than by global supply chains, a world in which the most

connected powers—and people—will win.

Connectivity is the most revolutionary force of the twenty-first century.

Mankind is reengineering the planet, investing up to ten trillion dollars per year in transportation, energy, and communications infrastructure linking the world's burgeoning megacities together. This has profound consequences for geopolitics, economics, demographics,

the environment, and social identity.

Connectivity, not geography, is our destiny. In *Connectography*, visionary strategist Parag Khanna travels from Ukraine to Iran, Mongolia to North Korea, Pakistan to Nigeria, and across the Arctic Circle and the South China Sea to explain the rapid and unprecedented changes affecting every part of the planet. He shows how militaries are

deployed to protect supply chains as much as borders, and how nations are less at war over territory than engaged in tugs-of-war over pipelines, railways, shipping lanes, and Internet cables. The new arms race is to connect to the most markets—a race China is now winning, having launched a wave of infrastructure investments to unite Eurasia around its new Silk Roads. The United

States can only regain ground by fusing with its neighbors into a super-continental North American Union of shared resources and prosperity. Connectography offers a unique and hopeful vision for the future. Khanna argues that new energy discoveries and technologies have eliminated the need for resource wars; ambitious transport corridors and power grids

are unscrambling Africa's fraught colonial borders; even the Arab world is evolving a more peaceful map as it builds resource and trade routes across its war-torn landscape. At the same time, thriving hubs such as Singapore and Dubai are injecting dynamism into young and heavily populated regions, cyber-communities empower commerce across vast

distances, and the world's ballooning financial assets are being wisely invested into building an inclusive global society. Beneath the chaos of a world that appears to be falling apart is a new foundation of connectivity pulling it together. Praise for Connectography "Incredible . . . With the world rapidly changing and urbanizing, [Khanna's] proposals might be the best way to confront a

radically different future."—The Washington Post "Clear and coherent . . . a well-researched account of how companies are weaving ever more complicated supply chains that pull the world together even as they squeeze out inefficiencies. . . . [He] has succeeded in demonstrating that the forces of globalization are winning."—Adrian Woolridge, The Wall Street Journal

"Bold . . . With an eye for vivid details, Khanna has . . . produced an engaging geopolitical travelogue."—Foreign Affairs "For those who fear that the world is becoming too inward-looking, Connectography is a refreshing, optimistic vision."—The Economist "Connectivity has become a basic human right, and gives everyone on the planet the opportunity to provide for their family and contribute

<p>to our shared future. Connectograph by charts the future of this connected world.”—Marc Andreessen, general partner, Andreessen Horowitz “Khanna’s scholarship and foresight are world-class. A must-read for the next president.”—Chuck Hagel, former U.S. secretary of defense This title has complex layouts that may take longer to download. <i>Our Extractive Age</i> Routledge</p>	<p>Employing a practical and contextual approach, this student textbook covers developments in the self-regulation of corporate governance, which is becoming global due to the activities of the OECD and World Bank. <i>Mr. Humble and Dr. Butcher</i> Athabasca University Press Part of the Comparative Work and Employment Relations series, Putting Labour in its</p>	<p>Place is an edited collection, containing cutting-edge research and theoretical innovation on global value chains, the nature of work and labour process theory. It addresses the different processes around the world that each add value to the goods or services being produced; whilst also analysing the idea of labour itself and the exploitation surrounding it. Key benefits: - Written by</p>

leading international academics. - A landmark text combining the growing interest in global value chains with labour process theory. - Provides up-to-date critical analysis of global developments.

Production of Manganese Ferroalloys

Cambridge University Press
Alexander Buhmann develops a new model for measuring the constitution and effects of country images by

combining well-established concepts from national identity theory and attitude theory with a recent model from reputation management. The model is operationalized and tested in two surveys.

Results show how different cognitive and affective dimensions of the country image affect each other and ultimately lead to the facilitation of behavioral intentions. The book introduces a

theory-grounded approach to clarify the dimensionality of the country image. It is the first to operationalize and test the dimensions of the country image by combining formative and reflective measures in a mixed-specified model.

New Forms of Worker Organization

Cambridge University Press
This book paints a vivid picture of Zambia's experience riding the

copper price rollercoaster. It brings together the best of recent research on Zambia's mining industry from eminent scholars in history, geography, anthropology, politics, sociology and economics. The authors discuss how aid donors pressed Zambia to privatize its key industry and how multinational mining houses took advantage of tax-breaks and lax regulation. It

considers the opportunities and dangers presented by Chinese investment, how both companies and the Zambian state responded to dramatic instabilities in global commodity markets since 2004, and how frustration with the courting of mining multinationals has led to the rise of populist opposition. This detailed study of a key industry in a poor Central African state tells us a great deal

about the unstable nature and uneven impacts of the whole global economic system.
Strong Managers, Weak Owners
 Oxford University Press
 Worldwide, governmental anti-corruption efforts have been ramping up like never before. From the U.S. Foreign Corrupt Practices Act ("FCPA") to the U.K. Bribery Act and recent Chinese, French,

Indonesian, Brazilian, and German anti-bribery legislations, the compliance world has witnessed the fight against corruption rocketing to the top of most law reform and enforcement agendas. As the fight against corruption goes global, practitioners of the compliance, regulatory, and investigative space must understand--and more importantly navigate--

these increasingly complicated and often perilous compliance waters. With that heavy reality in mind, this first-of-its-kind book draws on the real-world experience and expertise possessed by some of the world's leading anti-corruption and anti-bribery practitioners to make meeting that challenge easier. Featuring country-specific chapters and practitioner-focused "how

to" modules, From Baksheesh to Bribery serves as a one-stop shop for practitioners, in-house counsel, compliance personnel, academics, and others who want--and often need--to understand the world's perspective on corruption and the fight against it. Organise, Educate, Control Routledge Getting it Right is a manual for corporate managers responsible for company

operations in poor and politically unstable societies. Managers can analyse their own interactions with local communities, so that they can more effectively accomplish their production goals and ensure local communities are better off as a result.

Bureaucratic
labor unions
are under

assault. Most unions have surrendered the achievements of the mid-twentieth century, when the working class was a militant force for change throughout the world. Now trade unions seem incapable of defending, let alone advancing, workers' interests. As unions implode and weaken, workers are independently forming their own unions, drawing on the tradition of syndicalism

and autonomism—a resurgence of self-directed action that augurs a new period of class struggle throughout the world. In Africa, Asia, the Americas, and Europe, workers are rejecting leaders and forming authentic class-struggle unions rooted in sabotage, direct action, and striking to achieve concrete gains. This is the first book to compile workers' struggles on a global basis,

examining the formation and expansion of radical unions in the Global South and Global North. The tangible evidence marshaled in this book serves as a handbook for understanding the formidable obstacles and concrete opportunities for workers challenging neoliberal capitalism, even as the unions of the old decline and disappear. Contributors include Au Loong-Yu, Bai Ruixue, Shawn Hattingh, Piotr

Bizyukov, Irina Olimpieva, Genese M. Sodikoff, Aviva Chomsky, Dario Bursztyn, Gabriel Kuhn, Erik Forman, Steven Manicasteri, Arup Kumar Sen, Verity Burgmann, Ray Jureidini, Meredith Burgmann, and Jack Kirkpatrick. Ni-Co 2021: The 5th International Symposium on Nickel and Cobalt Chatham House In spite of its key role in creating the ruinous financial crisis

of 2008, the American banking industry has grown bigger, more profitable, and more resistant to regulation than ever. Anchored by six megabanks whose assets amount to more than 60 percent of the country's gross domestic product, this oligarchy proved it could first hold the global economy hostage and then use its political muscle to fight off

meaningful reform. 13 Bankers brilliantly charts the rise to power of the financial sector and forcefully argues that we must break up the big banks if we want to avoid future financial catastrophes. Updated, with additional analysis of the government's recent attempt to reform the banking industry, this is a timely and expert account of our troubled political economy.

The Development of Metallurgy in Canada Since 1900
Cambridge University Press
Despite the difference in their populations and political status, New Caledonia and Papua New Guinea have comparable levels of economic dependence on the extraction and export of mineral resources. For this reason, the costs and benefits of large-scale mining

projects for indigenous communities has been a major political issue in both jurisdictions, and one that has come to be negotiated through multiple channels at different levels of political organisation. The 'resource boom' that took place in the early years of the current century has only served to intensify the political contests and conflicts that surround the distribution of social,

economic and environmental costs and benefits between community members and other 'stakeholders' in the large-scale mining industry. However, the mutual isolation of Anglophone and Francophone scholars has formed a barrier to systematic comparison of the relationship between large-scale mines and local-level politics in Papua New Guinea and

New Caledonia, despite their geographical proximity. This collection of essays represents an effort to overcome this barrier, but is also intended as a major contribution to the growth of academic and political debate about the social impact of the large-scale mining industry in Melanesia and beyond. Getting it Right Routledge In The Left Hand of Capital, Fernando

Ignacio Leiva provides a theoretically grounded analysis of the last thirty years of socioeconomic policies in Chile, beginning at the end of the Pinochet military regime in 1990. He skillfully probes how innovative center-left politico-economic initiatives transformed the state's relationships with the country's urban poor, indigenous peoples, workers,

students, and business elites, thereby contributing to institutionalize , legitimize, and renew Chile's neoliberal system of domination. Leiva documents how such politics, progressive in appearance, were pivotal in forging new arts of domestication, "participatory" social control mechanisms, and commodified subjectivities. This landmark book guides us into a deeper awareness

about the limitations of center-left politics, not only in Chile, but elsewhere in the Americas and Western Europe as well. At a time when far-right movements seem to be growing in the Global South, Europe, and the United States, this book offers valuable insights into the predicament of social democracy and how, as in Chile and in the context of global neoliberalism, it can become

the "left hand of capital." Company Law Oxford University Press, USA
A People's Curriculum for the Earth is a collection of articles, role plays, simulations, stories, poems, and graphics to help breathe life into teaching about the environmental crisis. The book features some of the best articles from Rethinking Schools magazine alongside classroom-friendly

readings on climate change, energy, water, food, and pollution—as well as on people who are working to make things better. A People’s Curriculum for the Earth has the breadth and depth of Rethinking Globalization: Teaching for Justice in an Unjust World, one of the most popular books we’ve published. At a time when it’s becoming increasingly obvious that life on Earth is at risk, here is a resource

that helps students see what’s wrong and imagine solutions. Praise for A People’s Curriculum for the Earth "To really confront the climate crisis, we need to think differently, build differently, and teach differently. A People’s Curriculum for the Earth is an educator’s toolkit for our times." — Naomi Klein, author of *The Shock Doctrine* and *This Changes Everything: Capitalism vs. the Climate*

"This volume is a marvelous example of justice in ALL facets of our lives—civil, social, educational, economic, and yes, environmental . Bravo to the Rethinking Schools team for pulling this collection together and making us think more holistically about what we mean when we talk about justice." — Gloria Ladson-Billings, Kellner Family Chair in Urban Education, University of Wisconsin-Madison

"Bigelow and Swinehart have created a critical resource for today's young people about humanity's responsibility for the Earth. This book can engender the shift in perspective so needed at this point on the clock of the universe." — Gregory Smith, Professor of Education, Lewis & Clark College, co-author with David Sobel of Place- and Community-based Education in Schools

SUPERHUBS

Princeton University Press
This book introduces Human-Centered Design (HCD) and outlines the benefits of the approach for mining equipment and new technology. It is a process that aims to make equipment and systems more usable and acceptable by focusing on the end user, their tasks, their work environment, or use context. This process requires that

users and other stakeholders are involved throughout the design and development process of the equipment or system. To date, HCD has not been widely applied to the design, development, and deployment of mining equipment or new technology. *The Political Economy of Coal* Law Journal Press Mainland China businesses are going global, transforming

the country from a manufacturing export platform into an overseas investment powerhouse. China Goes Global is the most thorough and up-to-date empirical analysis of the accelerating effort of Chinese companies to go global by investing overseas. It details the overall trends of this activity with respect to its sectors, channels, overseas targets, and particular firms, along the role of

Chinese Government policy in facilitating business enterprise globalization. The book offers readers an enterprise level of view outward expansion by Chinese firms that is focused not only on the big-names, but also less well-known, but equally important trailblazing enterprises. In doing so it offers practical suggestions on how firms can tackle the challenges encountered

when expanding outward.
The Left Hand of Capital
 Edward Elgar Publishing
 The “delightfully macabre” (The New York Times) true tale of a brilliant and eccentric surgeon...and his quest to transplant the human soul. In the early days of the Cold War, a spirit of desperate scientific rivalry birthed a different kind of space race: not the race to outer space that we all know, but a

race to master the inner space of the human body. While surgeons on either side of the Iron Curtain competed to become the first to transplant organs like the kidney and heart, a young American neurosurgeon had an even more ambitious thought: Why not transplant the brain? Dr. Robert White was a friend to two popes and a founder of the Vatican's Commission on Bioethics.

He developed lifesaving neurosurgical techniques still used in hospitals today and was nominated for the Nobel Prize. But like Dr. Jekyll before him, Dr. White had another identity. In his lab, he was waging a battle against the limits of science and against mortality itself—working to perfect a surgery that would allow the soul to live on after the human body had died. This “fascinating” (The Wall

Street Journal), “provocative” (The Washington Post) tale follows his decades-long quest into tangled matters of science, Cold War politics, and faith, revealing the complex (and often murky) ethics of experimentation and remarkable innovations that today save patients from certain death. It's a “masterful” (Science) look at our greatest fears and our greatest

hopes—and the long, strange journey from science fiction to science fact.

Mining and Sustainable Development

Routledge

Covers several aspects of bank holding companies, from permissible activities through operations. This book addresses such significant subjects as the Federal Reserve Board's supervisory framework for complex banking

organizations, including guidance concerning capital adequacy; enhanced enforcement authority of federal regulators, and more.

Business Ethics: A Kantian Perspective

Bloomsbury Publishing

This volume examines the role of communication in contributing to and contesting the current climate crisis.

There is now widespread agreement that even if

increases in carbon emissions are kept to the current international target the climate crisis will continue to intensify.

This book brings together, for the first time, state-of-the-art research with activists' interventions to place debate around climate crisis within the wider conversation about the changing relations between communications and contemporary capitalism.
