Planning algorithms are impacting technical disciplines and industries around the world, including robotics, computer-aided design, manufacturing, computer graphics, aerospace applications, drug design, and protein folding. This coherent and comprehensive book unifies material from several sources, including robotics, control theory, artificial intelligence, and algorithms. The treatment is centered on robot motion planning, but integrates material on planning in discrete spaces. A major part of the book is devoted to planning under uncertainty, including decision theory, Markov decision processes, and information spaces, which are the 'configuration spaces' of all sensor-based planning problems. The last part of the book delves into planning

under differential constraints that arise when automating the motions of virtually any mechanical system. This text and reference is intended for students, engineers, and researchers in robotics, artificial intelligence, and control theory as well as computer graphics, algorithms, and computational biology. *An Inconvenient Sequel: Truth to Power* Courier Corporation

Not afraid to tackle provocative topics in American culture, from gun violence and labor policies to terrorism and health care, Michael Moore has earned both applause and invective in his career as a documentarian. In such polarizing films as *Bowling for Columbine*, *Fahrenheit 9/11*, and *Sicko*, Moore has established a unique voice of radical nostalgia for progressivism, and in doing so has

become one of the most recognized documentary filmmakers of all time. In the first in-depth study of Moore's feature-length documentary films, editors Thomas W. Benson and Brian J. Snee have gathered leading rhetoric scholars to examine the production, rhetorical appeals, and audience reception of these films. Contributors critique the films primarily as modes of public argument and political art. Each essay is devoted to one of Moore's films and traces in detail how each film invites specific audience responses. Michael Moore and the Rhetoric of Documentary reveals not only the art, the argument, and the emotional appeals of Moore's documentaries but also how these films have revolutionized the genre of documentary filmmaking.

### Journalism, fake news & disinformation

Simon and Schuster

Revised and Expanded Edition. In this age of supposed scientific enlightenment, many people still believe in mind reading, past-life regression theory, New Age hokum, and alien abduction. A no-holds-barred assault on popular superstitions and prejudices, *Why People Believe Weird Things* debunks these nonsensical claims and explores the very human reasons people find otherworldly phenomena, conspiracy theories, and cults so appealing. In an entirely new chapter, "Why Smart People Believe in Weird Things," Michael Shermer takes on science luminaries like physicist Frank Tipler and others, who hide their

spiritual beliefs behind the trappings of science. Shermer, science historian and true crusader, also reveals the more dangerous side of such illogical thinking, including Holocaust denial, the recovered-memory movement, the satanic ritual abuse scare, and other modern crazes. *Why People Believe Strange Things* is an eye-opening resource for the most gullible among us and those who want to protect them.

The paleontologist and professor of anatomy who co-discovered Tiktaalik, the “fish with hands,” tells a “compelling scientific adventure story that will change forever how you understand what it means to be human” (Oliver Sacks). By examining fossils and DNA, he shows us that our hands actually resemble fish fins, our heads are organized like long-extinct jawless fish, and major parts of our genomes look and function like those of worms and bacteria. Your Inner Fish makes us look at ourselves and our world in an

illuminating new light. This is science writing at its finest—enlightening, accessible and told with irresistible enthusiasm.

\* Our summary is short, simple and pragmatic. It allows you to have the essential ideas of a big book in less than 30 minutes. By reading this summary, you will learn why and how mankind is changing the planet's climate in a sustainable way, with unpredictable consequences. You will also learn : why carbon dioxide in the atmosphere is so

dangerous; why mankind has not yet taken the true measure of the danger; how temperature increases are permanently changing very complex climate systems and ecosystems; that the ice at the poles is in danger of disappearing in the near future, with dramatic consequences for society; what you can do at your level to reduce the damage. You have probably heard about global warming. However, it is difficult to form an opinion in this area.

Contradictory statements follow one another, the consequences on the Earth and human beings are unclear, the reforms initiated by governments are timid and piecemeal. What should we think? Is the emergency really declared? Is global warming natural or man-made? Does humanity still have time to take

the necessary measures? The former vice-president of the United States and famous defender of ecology, Al Gore, answers these questions. Are you ready to take the right measure of the situation? \*Buy now the summary of this book for the modest price of a cup of coffee!

McGonigal makes a persuasive case that games have a lot to teach us about how to make our lives, and the world, better."

With 174 million gamers in the United States alone, we now live in a world where every generation will be a gamer generation. But why, Jane McGonigal asks, should games be used for escapist entertainment alone? In this groundbreaking book, she shows how we can leverage the power of games to fix what is wrong with the real world—from social problems like depression and obesity to global issues like poverty and climate change—and introduces us to cutting-edge games that are already changing the business, education, and

nonprofit worlds. Written for gamers and non-gamers alike, *Reality Is Broken* shows that the future will belong to those who can understand, design, and play games. "Fascinating.... Lays a foundation for understanding human history."—Bill Gates In this "artful, informative, and delightful" (William H. McNeill, *New York Review of Books*) book, Jared Diamond convincingly argues that geographical and environmental factors shaped the modern world. Societies that had had a head start in food production advanced beyond the hunter-gatherer stage, and

then developed religion --as well as nasty germs and potent weapons of war --and adventured on sea and land to conquer and decimate preliterate cultures. A major advance in our understanding of human societies, *Guns, Germs, and Steel* chronicles the way that the modern world came to be and stunningly dismantles racially based theories of human history. Winner of the Pulitzer Prize, the Phi Beta Kappa Award in Science, the Rhone-Poulenc Prize, and the Commonwealth club of California's Gold Medal.

300 million powerpoint presentations are given daily, yet there is a disconnect between the amazing technology of powerpoint and a mediocre student learning experience. To unleash the full potential of powerpoint presentations, we must do a better job of creating presentations that fit the educational needs of students. *Slides for Students* does just that. *Slides for Students* is an open and honest discussion about powerpoint in the classroom. A need exists for thoughtfully designed and implemented classroom instruction that focuses on the learner rather than on the technology. This book was written to

translate academic research findings into practical suggestions about powerpoint that educators can use. Divided into two parts, Slides for Students discusses the history of powerpoint, explores academic studies on the topic, and demonstrates how to design slides to best suit educational needs and engage with students to avoid the dreaded "death by powerpoint."

Are the often alarming claims about global warming based on science and

justified by the facts? Is the human race really facing a major crisis due to emissions from fossil fuels? Would the proposed Climate Treaty solve a real environmental threat or would it create worldwide economic and social harm? S. Fred Singer is a distinguished astrophysicist who has taken a hard, scientific look at the evidence. In this new book, Dr. Singer explores the inaccuracies in historical climate data, the limitations of attempting to model climate on computers, solar variability and its impact on climate, the effects of clouds, ocean currents, and sea levels on global climate, and factors that could mitigate any human impacts on world climate. Singer's masterful analysis decisively shows that the pessimistic, and often alarming, global warming

scenarios depicted in the media have no scientific basis. In fact, he finds that many aspects of any global warming, such as a longer growing season for food and a reduced need to use fossil fuels for heating, would actually have a positive impact on the human race. Further, Singer notes how many proposed "solutions" to the global warming "crisis" (like "carbon" taxes) would have severe consequences for economically disadvantaged groups and

nations. According to Arthur C. Clarke, author of *2001: A Space Odyssey*, *Hot Talk, Cold Science* dares to point out that 'the Emperor has no clothes.' Is there evidence to suggest discernible human influence on global climate? Of great interest, this book demonstrates that, at best, the evidence is sketchy and incomplete. *Hot Talk, Cold Science* is essential reading for anyone who wants to be fully informed about the global warming debate.
