PISA Take the Test Sample Questions from OECD's PISA Assessments Chicago Review Press

How did British authorities manage to secure the commitment of large dominion and Indian armies that could plan, fight, shoot, communicate, and sustain themselves, in concert with the British Army and with each other, during the era of the two world wars? What did the British want from the dominion and Indian armies and how did they go about trying to get it? Douglas E Delaney seeks to answer these questions to understand whether the imperial army project was successful. Answering these questions requires a long-term perspective — one that begins with efforts to fix the armies of the British Empire in the aftermath of their desultory performance in South Africa (1899-1903) and follows through to the high point of imperial military cooperation during the Second World War. Based on multi-archival research conducted in six different countries, on four continents, Delaney argues that the military compatibility of the British Empire armies was the product of a deliberate and enduring imperial army project, one that aimed at standardizing and piecing together the armies of the empire, while, at the same time, accommodating the burgeoning autonomy of the dominions and even India. At its core, this book is really about how a military coalition worked.

This is the story of LSD told by a concerned yet hopeful father, organic chemist Albert Hofmann, Ph.D. He traces LSD's path from a promising psychiatric research medicine to a recreational drug sparking hysteria and prohibition. In *LSD: My Problem Child*, we follow Dr. Hofmann's trek across Mexico to discover sacred plants related to LSD, and listen in as he corresponds with other notable figures about his remarkable discovery. Underlying it all is Dr. Hofmann's powerful conclusion that mystical experiences may be our planet's best hope for survival. Whether induced by LSD, meditation, or arising spontaneously, such experiences help us to comprehend "the wonder, the mystery of the divine, in the microcosm of the atom, in the macrocosm of the spiral nebula, in

the seeds of plants, in the body and soul of people." More than sixty years after the birth of Albert Hofmann's problem child, his vision of its true potential is more relevant, and more needed, than ever.

Memoir of Captain Paul Cuffe Office of the Secretary, Historical Offi

In presenting, for the first time, to English readers the greatest work of Germany's greatest mediæval poet, a few words of introduction, alike for poem and writer, may not be out of place. The lapse of nearly seven hundred years, and the changes which the centuries have worked, alike in language and in thought, would have naturally operated to render any work unfamiliar, still more so when that work was composed in a foreign tongue; but, indeed, it is only within the present century that the original text of the Parzival has been collated from the MSS. and made accessible, even in its own land, to the general reader. But the interest which is now felt by many in the Arthurian romances, quickened into life doubtless by the genius of the late Poet Laureate, and the fact that the greatest composer of our time, Richard Wagner, has selected this poem as the groundwork of that wonderful drama, which a growing consensus of opinion has hailed as the grandest artistic achievement of this century, seem to indicate that the time has come when the work of Wolfram von Eschenbach may hope to receive, from a wider public than that of his own day, the recognition which it so well deserves. Of the poet himself we know but little, save from the personal allusions scattered throughout his works; the dates of his birth and death are alike unrecorded, but the frequent notices of contemporary events to be found in his poems enable us to fix with tolerable certainty the period of his literary activity, and to judge approximately the outline of his life. Wolfram's greatest work, the Parzival, was apparently written within the early years of the thirteenth century; he makes constant allusions to events happening, and to works produced, within the first decade of that period; and as his latest work, the Willehalm, left unfinished, mentions as recent the death of the Landgrave Herman of Thuringia, which occurred in 1216, the probability seems to be that the Parzival was written within the first fifteen years of the thirteenth century. Inasmuch, too, as this work bears no traces of immaturity in thought or style, it is probable that the date of the poet's birth cannot be placed much later than 1170.

Read the story behind the award-winning film Judas and the Black Messiah On December 4, 1969, attorney Jeff Haas was in a police lockup in Chicago, interviewing Fred Hampton's fiancée. Deborah Johnson described how the police pulled her from the room as Fred lay unconscious on their bed. She heard one officer say, "He's still alive." She then heard two shots. A second officer said, "He's good and dead now." She looked at Jeff and asked, "What can you do?" The Assassination of Fred Hampton remains Haas's personal account of how he and People's Law Office partner Flint Taylor pursued Hampton's assassins, ultimately prevailing over unlimited government resources and FBI conspiracy. Fifty years later, Haas writes that there is still an urgent need for the revolutionary systemic changes Hampton was organizing to accomplish. Not only a story of justice delivered, this book spotlights Hampton as a dynamic community leader and an inspiration for those in the ongoing fight against injustice and police brutality.

The U.S. Army fought World War II with materiel much of which was developed in the decade prior to our entry, particularly in the period following the German blitz in Poland. Our efforts to develop munitions to the point where our armies could cope on equal terms with those of potential enemies are covered here in this, the first of three projected volumes on the history of the Ordnance Department in World War II. How well the Ordnance Department succeeded in matching the Germans in quality continues to be a matter of debate both within the Ordnance Department itself, and between the using arms and the Department. That the battle of quantity was won-with the help of a superb industrial machine-can hardly be denied. This volume, the result of diligent research by Dr. Constance McL. Green and her associates, should interest not only military men but also scientists, industrialists, and laymen in general. Among other things, it shows the urgent necessity of a directed, continuous, and intensive research program and the danger in failing to recognize and profit by developments abroad. Also shown is the

inherent time interval between the drawing board and the production of the end item in quantity."

Controlling Accounts.--The addition of special columns in books of original entry makes possible the keeping of Controlling Accounts. The most common examples of such accounts are Accounts Receivable account and Accounts Payable account. These summary accounts, respectively, displace individual customers' and creditors' accounts in the Ledger. The customers' accounts are then segregated in another book called the Sales Ledger or Customers' Ledger, while the creditors' accounts are kept in the Purchase or Creditors' Ledger. The original Ledger, now much reduced in size, is called the General Ledger. The Trial Balance now refers to the accounts in the General Ledger. It is evident that the task of taking a Trial Balance is greatly simplified because so many fewer accounts are involved. A Schedule of Accounts Receivable is then prepared, consisting of the balances found in the Sales Ledger, and its total must agree with the balance of the Accounts Receivable account shown in the Trial Balance. A similar Schedule of Accounts Payable, made up of all the balances in the Purchase Ledger, is prepared, and it must agree with the balance of the Accounts Payable account of the General Ledger." The Balance Sheet.--In the more elementary part of the text, the student learned how to prepare a Statement of Assets and Liabilities for the purpose of disclosing the net capital of an enterprise. In the present chapter he was shown how to prepare a similar statement, the Balance Sheet. For all practical...

Dubbed "the poster girl of Palestinian militancy," Leila Khaled's image flashed across the world after she hijacked a passenger jet in 1969. The picture of a young, determined looking woman with a checkered scarf, clutching an AK-47, was as era-defining as that of Che Guevara. In this intimate profile, based on interviews with Khaled and those who know her, Sarah Irving gives us the life-story behind the image. Key moments of Khaled's turbulent life are explored, including the dramatic events of the hijackings, her involvement in the Marxist Popular Front for the Liberation of Palestine, her opposition to the Oslo peace process, and her activism today. Leila Khaled's example gives unique insights into the Palestinian struggle through one remarkable life "from the tension between armed and political struggle, to the decline of the secular Left and the rise of Hamas, and the role of women in a largely male movement.

The Smell of Kerosene tells the dramatic story of a NASA research pilot who logged over 11,000 flight hours in more than 125 types of aircraft. Donald Mallick gives the reader fascinating first-hand descriptions of his early naval flight training, carrier operations, and his research flying career with NASA and its predecessor agency, the National Advisory Committee for Aeronautics (NACA). Mallick joined the NACA as a research pilot at the Langley Memorial Aeronautical Laboratory at Hampton, Virginia, where he flew modified helicopters and jets, and witnessed the NACA's evolution into the National Aeronautics and Space Administration. After transferring to the NASA Flight Research Center (now NASA Dryden Flight Research Center) at Edwards, California, he became involved with projects that further pushed the boundaries of aerospace technology. These included the giant delta-winged XB-70 supersonic research airplane, the wingless M2-F1 lifting body vehicle, and the triple-sonic YF-12 Blackbird. Mallick also test-flew the Lunar Landing Research Vehicle (LLRV) and helped develop techniques used in training astronauts to land on the Moon. This book puts the reader in the pilot's seat for a "day at the office" unlike any other.
