One of Detroit's most defining modern characteristics—and most pressing dilemmas—is its huge amount of neglected and vacant land. In *Mapping Detroit: Land, Community, and Shaping a City*, editors June Manning Thomas and Henco Bekkering use

chapters based on a variety of maps to shed light on how Detroit moved from frontier fort to thriving industrial metropolis to today's high-vacancy city. With contributors ranging from a map archivist and a historian to architects, urban designers, and urban planners, *Mapping Detroit* brings a unique perspective to the historical causes, contemporary effects, and potential future of Detroit's transformed landscape. To show how Detroit arrived in its

present condition, contributors in part 1, *Evolving Detroit: Past to Present*, trace the city's beginnings as an agricultural, military, and trade outpost and map both its depopulation and attempts at redevelopment. In part 2, *Portions of the City*, contributors delve into particular land-related systems and neighborhood characteristics that encouraged modern social and economic changes. Part 2 continues by offering case studies of

two city neighborhoods—the Brightmoor area and Southwest Detroit—that are struggling to adapt to changing landscapes. In part 3, Understanding Contemporary Space and Potential, contributors consider both the city’s ecological assets and its sociological fragmentation to add dimension to the current understanding of its emptiness. The volume’s epilogue offers a synopsis of the major points of the 2012 Detroit Future City report, the city’s own strategic

blueprint for future land use. Mapping Detroit explores not only what happens when a large city loses its main industrial purpose and a major portion of its population but also what future might result from such upheaval. Containing some of the leading voices on Detroit’s history and future, Mapping Detroit will be informative reading for anyone interested in urban studies, geography, and recent American history. In this innovative study, Franck

Cochoy challenges this perspective and takes a close look at the transformation of commerce through the lens of Progressive Grocer, an American trade magazine launched in 1922. Aimed at modernizing small independent grocery stores, Progressive Grocer sowed the seeds for modern self-service which spread in small retail outlets, sometimes well before the advent of the large retail spaces which are traditionally viewed as the origin of the self-

service economy. The author illustrates how this publication had a highly influential role on what the trade considered to be best practice and shaped what was considered to be cutting edge. By displacing the consumer and their agency from the centre of analytic attention, this innovative book highlights the complex impact of social, technical and retailing environment factors that structure and delimit consumer freedom in the marketplace. This detailed critical analysis of the

origins of self-service will be of interest to a wide variety of scholars not only in marketing and consumer research, but also in business history, sociology and cultural studies.

This manual provides direction for the preparation of noise and vibration sections of environmental documents for mass transportation projects. The manual has been developed in the interest of promoting quality and uniformity in assessments. It is expected to be used by

people associated with or affected by the urban transit industry, including Federal Transit Administration (FTA) staff, grant applicants, consultants and the general public. Each of these groups has an interest in noise/vibration assessment, but not all have the need for all the details of the process. Consequently, this manual has been prepared to serve readers with varying levels of technical background and interests. It sets forth the basic concepts, methods

and procedures for documenting the extent and severity of noise impacts from transit projects.

The Centers for Disease Control and Prevention estimates that approximately 40 million people in the United States suffer from a serious illness that limits their daily activities.

These illnesses include heart and lung disease, cancer, diabetes, and Alzheimer's disease and

other forms of dementia. However, significant disparities exist across different communities in the quality and access to care for these illnesses. Factors such as race, ethnicity, gender, geography, socioeconomic status, or insurance status exacerbate these complex disparities. It is critical to reevaluate the current models of care delivery across diverse communities and vulnerable populations. On April 4, 2019, The National Academies of

Sciences, Engineering, and Medicine convened a workshop to investigate barriers, policy initiatives, and opportunities for improving access to and equity of care for people living with a serious illness. Discussions explored the current climate of health care and opportunities to improve access to care using organizational, community, patient and family, and clinician perspectives. This publication summarizes the discussions and presentations from the

workshop.
