Sergius Bulgakov is widely considered to be the twentieth century's foremost Orthodox theologian, and his book *The Comforter* is an utterly comprehensive and profound study of the Holy Spirit.

Encyclopedic in scope, *The Comforter* explores all aspects of the doctrine of the Holy Spirit, as they are viewed in the Orthodox tradition and throughout church history. The book has sections on the development of the doctrine of the Spirit in early Christianity and on the development of the doctrine of procession in the patristic and later Byzantine periods. It also touches on the place of the Holy Spirit in the Trinity and explores Old and New Testament notions of the Spirit of God. A concluding chapter deals with the mystical revelation of the Holy Spirit. Made available in English through the work of Boris Jakim, today's premier translator of Russian theology and philosophy into English, Bulgakov's *Comforter* in this edition is a major publishing event.

Cytogenomics demonstrates that chromosomes are crucial in understanding the human genome and that new high-throughput approaches are central to advancing cytogenetics in the 21st century. After an introduction to (molecular) cytogenetics, being the basic of all cytogenomic research, this book highlights the strengths and newfound advantages of cytogenomic research methods and technologies, enabling researchers to jump-start their own projects and more effectively gather and interpret chromosomal data. Methods discussed include banding and molecular cytogenetics, molecular combing, molecular karyotyping, next-generation sequencing, epigenetic study approaches, optical mapping/karyomapping, and CRISPR-cas9 applications for cytogenomics. The book's second half demonstrates recent applications of cytogenomic techniques, such as

characterizing 3D chromosome structure across different tissue types and insights into multilayer organization of chromosomes, role of repetitive elements and noncoding RNAs in human genome, studies in topologically associated domains, interchromosomal interactions, and chromoanagenesis. This book is an important reference source for researchers, students, basic and translational scientists, and clinicians in the areas of human genetics, genomics, reproductive medicine, gynecology, obstetrics, internal medicine, oncology, bioinformatics, medical genetics, and prenatal testing, as well as genetic counselors, clinical laboratory geneticists, bioethicists, and fertility specialists. Offers applied approaches empowering a new generation of cytogenomic research using a balanced combination of classical and advanced technologies Provides a framework for interpreting chromosome structure and how this affects the functioning of the genome in health and disease Features chapter contributions from international leaders in the field *The National Union Catalogs, 1963-* Wm. B. Eerdmans Publishing

Liturgical papyri are prime witnesses to the history of liturgy and the religious and theological currents in late antique Egypt. These items from the third to ninth century preserve hundreds of Greek and Coptic hymns, prayers, and acclamations, most otherwise unknown but some still recited by the Coptic Church. Agnes T. Mihalyko offers the first extensive introduction to the liturgical papyri, facilitating the reader's access to them with a detailed inventory of edited manuscripts and an extensive discussion of their date and provenance. She also examines liturgical papyri as the first preserved liturgical manuscripts, describing their material features, the ways they were used, the early history of the liturgical books, and their languages. She reveals how liturgical texts were written down and transmitted and locates these important manuscripts in the book culture of late antique Egypt.

Introduction When the study of heredity and variation first came to be treated as a

scientific subject-and this, one must remember, was only just over a hundred years ago-there was an unfortunate separation between the disciplines of cytology and experimental breeding. This separation was based partly on a lack of understanding and partly on a lack of the desire to understand. Even WILLIAM BATESON, the first apostle of mendelism in England, had a blind spot for cytology and for many years dogmatically refused to believe that MENDEL'S determinants were transmitted and distributed by the chromosomes. This separation between cytology and experimental breeding is one which persists, in a measure, even today, simply because there are two quite different, though complementary, techniques available for the study of heredity and variation. On the one hand, one can study directly the structure and behaviour of the actual vehicles which transmit the genetic determinants from one generation to the next. This is the method employed by those who study genetics through a microscope. The alternative method is that used by the experimental breeder who, in default of being able to watch the hereditary factors segregate from each other directly, is obliged to examine the constitution of the germ cells indirectly by sampling, and usually at random, the products of a controlled mating.

Most aquatic ecosystems have variable water levels. These water-level fluctuations (WLF) have multiple effects on the organisms above and below the waterline. Natural WLF patterns in lakes guarantee both productivity and biodiversity, while untimely floods and droughts may have negative effects. Human impacts on WLF have led to a stabilization of the water levels of many lakes by hydraulic regulation, untimely drawdown due to water use, or floods due to water release from hydropower plants in the catchments. This book provides a first review in this field. It presents selected papers on the ecological effects of WLF in lakes, resulting from a workshop at the University of Konstanz in winter 2005. Issues addressed here include the

extent of WLF, and analyses of their effects on different groups of biota from microorganisms to vertebrates. Applied issues include recommendations for the hydrological management of regulated lakes to reduce negative impacts, and a conceptual framework is delivered by an extension of the floodpulse concept for lakes. Current impacts on water use, including increasing demands on drinking and irrigation water, hydropower etc., and climate change effects on WLF make this book an essential resource for aquatic ecologists, engineers, and decision-makers dealing with the management of lake ecosystems and their catchments.

St. Sabas (439-532 CE), was one of the principal leaders of Palestinian monasticism, that had flourished in the sixth century in the desert of Jerusalem. As an abbot he was the first in Palestine to formulate a monastic rule in writing, and his activity as an ecclesiastical leader bore upon the life of the entire Christian community in the Holy land. He and his monks were active in the theological disputes that affected the fate of the Christian Church of Palestine, and shaped it as a stronghold of Orthodoxy. But his activity has transcended his place and time. His largest monastery - the Great Laura (Mar saba), functioned from the sixth to the ninth century as the intellectual centre of the See of Jerusalem. The most distinguished among its authors were Cyril of Scythopolis, Leontius of Byzantium, John Moschus and Sophronius, Antiochus Monachos, John of Damascus, Cosmas the Hymnographer, Leontius of Damascus and Stephen Mansur. Their treatises on dogma, and prayer, shaped Orthodox theology, liturgy and hymnography in Palestine and beyond. This literary activity in Greek was complemented by scribal activity of copying and translating of Greek manuscripts into Arabic and Georgian. There was also original composition in Arabic by Theodore Abu Qurrah and others. Monastic life in Mar Saba, that continued under Muslim rule with only

short intermissions, preserved the Sabaite tradition, and contributed to its reputation, parallel to that of Jerusalem. Sabaite monks were renown as paragons of monasticism and dogma, who had inspired monastic and ecclesiastical reformers in later centuries throughout the Orthodox world. Its fame spread far and wide, from Rome and North Africa in the west, to Serbia, Russia and Georgia in the east, affecting Christian dogma and liturgy therein. The thirty-one studies included in this volume, each written by an expert in his field, present the various facets of the Sabaite heritage in the Orthodox Church, from the sixth century to the present.

An indispensable guide to how marriage acquired the status of a sacrament. This book analyzes in detail how medieval theologians explained the place of matrimony in the church and her law, and how the bitter debates of the sixteenth century elevated the doctrine to a dogma of the Catholic faith.

L'humanisme de Bossuet IRMA

An extraordinary debut novel of love that survives the fires of hell and transcends

the boundaries of time. On a burn ward, a man lies between living and dying, so disfigured that no one from his past life would even recognize him. His only comfort comes from imagining various inventive ways to end his misery. Then a woman named Marianne Engel walks into his hospital room, a wild-haired, schizophrenic sculptress on the lam from the psych ward upstairs, who insists that she knows him - that she has known him, in fact, for seven hundred years. She remembers vividly when they met, in another hospital ward at a convent in medieval Germany, when she was a nun and he was a wounded mercenary left to die. If he has forgotten this, he is not to worry: she will prove it to him. And so Marianne Engel begins to tell him their story, carving away his disbelief and slowly drawing him into the orbit and power of a word he'd never uttered: love.
