Codes - Hyundai*

The diagnostic trouble code is the code

your OBD generates to tell you something
is wrong Reading as a series of five letters
and numbers, the DTC allows you to home
in on the system that is not functioning
properly For example, if your vehicle's
OBD detects a leak in the evaporative
emission system, you may see a P0442
code

PUBLISHED BY THE NATIONAL SERVICE TRAINING

Certain Hyundai vehicles equipped with 8-
speed dual clutch transmissions (DCT)
may encounter drivability symptoms, such
as rough upshifts, hesitations, or lack of
motive power, and/or certain Diagnostic
Trouble Codes (DTC) such as P1C2D03 The
recall remedy is to update the 8 Speed
DCT TCU only

Hyundai OBD-II Trouble Codes

The P1326 code for Hyundai vehicles indicates an issue with the Knock Sensor Detection System (KSDS), which is designed to detect vibrations indicating excessive connecting rod bearing wear. The purpose of the system is to alert the driver at an early stage of bearing wear before severe engine damage, including engine failure, occurs.
