WASHINGTON CHAMBERS

GCSE Geography Edexcel B Oxford University Press - Children "Recollections of a Pioneer" is an autobiographical account by J. Watt Gibson, which primarily focuses on the author's participation in the American Civil War. The book was written at the solicitation of many Gibson's friends and acquaintances who urged that his recollections of that period ought to be preserved. It covers the author's first journey to California in the late 1840s, gold mining, crossing the plains with cattle and his experiences during and after the Civil War, and ends with his return to Missouri and getting married in 1868.

In recent years there has been increased attention paid to the importance of assessment in Geographical Education, the chosen subject for this book. Assessment is an important tool for collecting information about student learning and for providing timely data to inform key stakeholders including students, teachers, parents and policymakers. To be effective, assessment needs to be valid, reliable and fair. Validity is about ensuring that we assess what we claim we are assessing. Reliability is about measuring performance and understanding in a consistent way. Without validity and reliability, assessment is unlikely to provide equitable opportunities for students to demonstrate what they know and can do. As geography educators it is therefore important that we identify the core concepts and skills in geography that we want students to master. We need a clear understanding of what the progression of learning looks like for each concept and skill so we can develop fit for purpose assessments that track and improve student learning. While there is a substantial literature on evidence-based assessment in secondary school contexts, research exploring best-practice assessment in geography is rare. This is a concern given the distinctive nature of geography and the important role of assessment in the learning process. This scholarly collection seeks to address this issue by connecting research in educational assessment with the domain of geography. The chapters are written by leading researchers in Geographical Education from across the globe. These chapters provide examples of innovation through the collective voices of geography teacher educator scholars from across Australia, USA, South Korea, Germany, Switzerland and Singapore. What unifies the work in this book, is that each chapter focuses on a key feature of the discipline of geography, providing scholarly examples of evidence-based practices for assessing student's knowledge and skills.

WJEC GCSE Geography Springer Nature

Published in 1995, this book seeks to show how geography teachers can meet the requirements of the National Curriculum at Key Stages 3 and 4 without abandoning principles of good practice. It considers geographical education in the contexts of geography itself, society and education. Deriving principles of good practice from these contexts, the author gives guidance on how to produce case studies (or curriculum units) that both reflect these principles and respond to the requirements of the National Curriculum following the Dearing Revised Order.
