Greatly revised and expanded, with a new afterword, this update to Martin Jacques's global bestseller is an essential guide to understanding a world increasingly shaped by Chinese power. Soon, China will rule the world. But in doing so, it will not become more Western. Since the first publication of *When China Rules the World*, the landscape of world power has shifted dramatically. In the three years since the first edition was published, *When China Rules the World* has proved to be a remarkably prescient book,

transforming the nature of the debate on China. Now, in this greatly expanded and fully updated edition, boasting nearly 300 pages of new material, and backed up by the latest statistical data, Martin Jacques renews his assault on conventional thinking about China's ascendancy, showing how its impact will be as much political and cultural as economic, changing the world as we know it. First published in 2009 to widespread critical acclaim - and controversy - *When China Rules the World: The End of the Western World and the Birth of a New Global Order* has sold a quarter of a million copies, been translated into eleven languages, nominated for two major literary awards, and is the subject of an immensely popular TED talk.

The striking upsurge in population growth rates in developing countries at the close of World War II gained force during the next decade. From the 1950s to the 1970s, scholars and advocacy groups publicized the trend and drew troubling conclusions about its economic and ecological implications. Private educational and philanthropic organizations, government, and international organizations joined in the struggle to reduce fertility. Three decades later this movement has seen changes beyond anyone's most optimistic dreams, and global demographic stabilization is expected in this century. The *Global Family Planning Revolution* preserves the remarkable record of this success. Its editors and authors offer more than a historical record. They discuss important lessons for current and future initiatives of the international community. Some programs succeeded while others initially failed, and the analyses provide valuable guidance for emerging health-related policy objectives and responses to global challenges.

Drawing on parent's reports of more than 1,800 children, this Monograph describes in detail both typical and exceptional courses of communicative development between the ages of eight and thirty months. The authors' large dataset offers unusually specific information on the developmentally variable

course of individual lexical, gestural, and grammatical skills. The wide variability found among children's acquisition of these skills presents a challenge to the concept of the "model child," and will intrigue developmental psychologists as well as linguists interested in language acquisition.

Alcohol use by young people is extremely dangerous - both to themselves and society at large. Underage alcohol use is associated with traffic fatalities, violence, unsafe sex, suicide, educational failure, and other problem behaviors that diminish the prospects of future success, as well as health risks "and the earlier teens start drinking, the greater the danger. Despite these serious concerns, the media continues to make drinking look attractive to youth, and it remains possible and even easy for teenagers to get access to alcohol. Why is this dangerous behavior so pervasive? What can be done to prevent it? What will work and who is responsible for making sure it happens?

Reducing Underage Drinking addresses these questions and proposes a new way to combat underage alcohol use. It explores the ways in which may different individuals and groups contribute to the problem and how they can be enlisted to prevent it. *Reducing Underage Drinking* will serve as both a game plan and a call to arms for anyone with an investment in youth health and safety.

Indicators of Crime and Criminal Justice National Academies Press Johannes Klumpers Biotechnologies, such as genetic engineering, cloning and biodiversity, raise many legal and ethical concerns, so it is important that people understand these issues and feel able to express their opinions. This is why the European Commission has been, for a number of years, supporting actions to improve communication among scientists in these diverse areas. The project 'Women in Biotechnology' (WONBIT), financed under the 6th Framework programme of the European Commission, is an excellent example of what can be done to target opinion-formers such as scientists, economists and lawyers in bottom-up activities, and to encourage a debate on gender issues triggered by developments in the life sciences. WONBIT gave rise to a successful international conference highlighting the importance of adopting good practices and ethical considerations in parallel with the rapid pace of progress in biotechnology - from a woman's point of view. In particular, the conference addressed women in

decision-making positions in b- technology with specific reference to scientific excellence, social competencies and management qualities as well as issues relating to environment, society and the younger generation. But it did not stop there: a key part of the conference was dedicated to stimulating public debate among non-specialists, which has led to a number of recommendations to policy-makers on better communication in biotechnology, on taking better account of the gender aspects of research, and on involving more women in the decision-making process that surrounds developments in biotechnology.

The World Bank Group has two overarching goals: End extreme poverty by 2030 and promote shared prosperity by boosting the incomes of the bottom 40 percent of the population in each economy. As this year's Poverty and Shared Prosperity report documents, the world continues to make progress toward these goals. In 2015, approximately one-tenth of the world's population lived in extreme poverty, and the incomes of the bottom 40 percent rose in 77 percent of economies studied. But success cannot be taken for granted. Poverty remains high in Sub-Saharan Africa, as well as in fragile and conflict-affected states. At the same time, most of the world's poor now live in middle-income countries, which tend to have higher national poverty lines. This year's report tracks poverty comparisons at two higher poverty thresholds—\$3.20 and \$5.50 per day—which are typical of standards in lower- and upper-middle-income countries. In addition, the report introduces a societal poverty line based on each economy's median income or consumption. Poverty and Shared Prosperity 2018: Piecing Together the Poverty Puzzle also recognizes that poverty is not only about income and consumption—and it introduces a multidimensional poverty measure that adds other factors, such as access to education, electricity, drinking water, and sanitation. It also explores how inequality within households could affect the global profile of the poor. All these additional pieces enrich our understanding of the poverty puzzle, bringing us closer to solving it. For more information, please visit worldbank.org/PSP

"Budget support has become an increasingly important instrument in the context of a partnership-based approach to development assistance. Compared to traditional modes of aid delivery, it promises greater country ownership, reduced transaction costs, better donor coordination, scaling up of poverty reduction and potentially greater development effectiveness. This book presents a timely and valuable review of key concepts, issues, experiences and emerging lessons relevant to budget support. It provides an overview of principal characteristics, expectations and concerns related to budget support, key design and implementation issues, as well as some practical experiences. The contributors include government representatives from developing countries, leading academic scholars, bilateral development agencies and development practitioners from international financial institutions, including the World Bank and the International Monetary Fund. They present a wide range of views on key issues such as the choice of instruments, alignment of budget support with country programs, predictability, and coordination and conditionality. The authors draw their insightful analysis on the contemporary research and evaluation work, as well as the broad practical experience with budget support. This book will be of great interest to practitioners in aid-recipient countries and international financial institutions, bilateral agencies and civil organizations involved in budget support."

Despite the existence of effective interventions, there are many developing countries which are not on track to achieve the Millennium Development Goals (MDGs) for health. In many countries the delivery of health services is inadequate and one way of improving the situation is to contract with non-state providers. Contracting is a mechanism for a financing entity to procure a defined set of services from a non-state provider. Performance-based contracting is a type of contracting with: (a) a clear set of objectives and indicators; (b) systematic efforts to collect data to judge contractor performance; and (c) some consequences for the contractor, either rewards or sanctions, based on performance. Effective contracting for health services can be facilitated by using a systematic approach, described in this toolkit, that addresses key issues, including how to: 1. have a constructive dialogue with all stakeholders; 2. define the health services in terms of what services are to be delivered, where, the

quantity of beneficiaries to be served, equity, and quality of care; 3. design the monitoring and evaluation to judge the performance of contractors; 4. select the contractors in a fair and transparent way; 5. arrange for effective contract management; 6. draft the contract and bidding documents; and 7. carry out the bidding process and successfully manage the contracts. The toolkit also includes a review of 14 evaluated examples of contracting in developing countries which concludes that the current weight of evidence indicates that contracting improves the coverage and quality of services rapidly. The six cases with controlled, before and after evaluations demonstrated large impact with the median double difference (follow-up minus baseline in the experimental group minus follow-up minus baseline in the control) ranging from 9 to 26 percentage points.

Over the past twenty years, many low- and middle-income countries have experimented with health insurance options. While their plans have varied widely in scale and ambition, their goals are the same: to make health services more affordable through the use of public subsidies while also moving care providers partially or fully into competitive markets. Colombia embarked in 1993 on a fifteen-year effort to cover its entire population with insurance, in combination with greater freedom to choose among providers. A decade later Mexico followed suit with a program tailored to its federal system. Several African nations have introduced new programs in the past decade, and many are testing options for reform. For the past twenty years, Eastern Europe has been shifting from government-run care to insurance-based competitive systems, and both China and India have experimental programs to expand coverage. These nations are betting that insurance-based health care financing can increase the accessibility of services, increase providers' productivity, and change the population's health care use patterns, mirroring the development of health systems in most OECD countries. Until now, however, we have known little about the actual effects of these dramatic policy changes. Understanding the impact of health insurance-based care is key to the public policy debate of whether to extend insurance to low-income populations—and if so, how to do it—or to serve them through other means. Using recent household data, this book presents evidence of the impact of insurance programs in China, Colombia, Costa Rica, Ghana,

Indonesia, Namibia, and Peru. The contributors also discuss potential design improvements that could increase impact. They

provide innovative insights on improving the evaluation of health insurance reforms and on building a robust knowledge base to

guide policy as other countries tackle the health insurance challenge.
