When installing or servicing an air conditioning or refrigeration system, two of the most important tasks performed by technicians are refrigerant recovery and system evacuation. In order to perform these tasks properly, and in a safe manner, technicians need to understand the theory behind them, having a working knowledge of the equipment and tools used, and employ accepted industry best practices. This e-book walks through each step of both tasks, while covering safety, theory, and application. Also covered are leak detection methods and filter drier use. System Recovery and Evacuation was written by HVACR instructors for HVACR instructors to provide sound, relevant information in a single source. This e-book provides students and practicing technicians with the information and knowledge necessary to understand refrigerant recovery, system evacuation, leak detection, and filter driers. It is full of color illustrations and includes worksheets that provide students and practicing technicians with the information and knowledge necessary to accurately and safely install or service air conditioning and refrigeration systems. The end of the e-book contains fill-in-the-blank questions that review the content of the entire manual. [Innovations and Interdisciplinary Solutions for Underserved Areas](#) Bentley Publishers

Alex Henshaw was awarded his private pilot's in 1932 and made a name for himself during the 1930s competing in the air races which were to popular at the time. At the start of World War II he became a test pilot first for Vickers Armstrong but was then invited by Jeffrey Quill to test Spitfires at Eastleigh. In June 1940, Henshaw moved to the Castle Bromwich factory in Birmingham shortly afterwards becoming Chief Test Pilot there. In the years that followed, he flew thousands of the Spitfires and Seafires which were built at the plant, sometimes test flying as many as 20 different aircraft in a single day. By the end of the war, 37,000 test flights had been made with Henshaw flying an estimated ten percent of all Spitfires ever built. It could be hazardous work and two test pilots working from Castle Bromwich were killed in crashes. Often flying in poor conditions and landing without aids of any kind, Henshaw's breathtaking acrobatic style and complete mastery of the aircraft were to save his life on several occasions. This is a new impression of a classic book about a truly classic aircraft. Much has been written about the Spitfire but as the reviewer of Sigh for a Merlin Pilot Magazine put it, 'If you only buy one Spitfire book, make this it.'

The first book of Failure Analysis Case Studies selected from volumes 1, 2 and 3 of the journal Engineering Failure Analysis was published by Elsevier Science in September 1998. The book has proved to be a sought-after and widely used source of reference material to help people avoid or analyse engineering failures, design and manufacture for greater safety and economy, and assess operating, maintenance and fitness-for-purpose procedures. In the last three years, Engineering Failure Analysis has continued to build on its early success as an essential medium for the publication of failure analysis cases studies and papers on the structure, properties and behaviour of engineering materials as applied to real problems in structures, components and design. Failure Analysis Case Studies II comprises 40 case studies describing the analysis of real engineering failures which have been selected from volumes 4, 5 and 6 of Engineering Failure Analysis. The case studies have been arranged in sections
