The book provides guidance and direction for any nurse educator

teaching in the professional environment and must write questions to evaluate learning. It covers the basics of item writing and leveling of items using Bloom's taxonomy to the learner. In addition, the book provides stem examples and new types of questions expected on the National Council Licensure Examination for both the registered and practical nurse. Finally, case study development and item analysis are presented. Evaluation of student performance by examination is critical in nursing education, from undergraduate to continuing education programs. Many faculty have reported learning the item writing process in graduate programs, but it is often lost or not reused. Recent research reports nursing faculty using textbook questions that have not been validated and security of the questions have been compromised. A nursing education profession should have the ability to develop items to validate that learning has occurred. The skill is essential to any professional to evaluate the effectiveness of learning. Critical thinking is a skill necessary for licensure examinations, and students often need assistance to learn this skill to pass the licensure examination and practice as a nurse. Therefore, faculty need a source to facilitate their development of the learned item writing process to assist learners and prepare them for practice. This book is unique in that it addresses the basics and the advanced components. In addition, the book provides a substantial list of stems and case study ideas. Finally, the book describes how to use a knowledge-based item and develop an item to a higher level of Blooms' taxonomy and assists those nursing programs that educate international students to adequately prepare for the student to pass the national licensing examination required to practice in

the US and Canada.

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to

advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles-including limits on nurses' scope of practice-should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.
