**An Earth Saving Revolution** Harmony

While many books have claimed parallels between modern physics and Eastern philosophy, none have dealt with the historical influences of both Chinese traditional thought and non-mechanistic, holistic western thought on the philosophies of the scientists who developed electromagnetic field theory. In *The Holistic Inspirations of Physics*, R. Valentine Dusek asks: to what extent is classical field theory a product of organic and holistic philosophies and frameworks? Electromagnetic theory has been greatly influenced by holistic worldviews, Dusek posits, and he highlights three alternative scientific systems that made the development of electromagnetic theory possible: medieval Chinese science, Western Renaissance occultism, and the German romantic traditions. He situates these "alternative" approaches in their social context and background, and traces their connection with components of "accepted" physical science in relation to a number of social movements and philosophical theories. Readers will learn of specific contributions made by these alternative traditions, such as the Chinese inventing the compass and discovering the earth's magnetic field and magnetic declination. Western alchemical ideas of active forces and "occult" influences contributed to Newton's theory of gravitation force as action at a distance, rather as a result of purely mechanical collisions and contact action. Dusek also describes the extent to which women's culture supplied (often without credit) the philosophical background ideas that were absorbed into mainstream field theory.

In 1958, a successful businessman named Robert Mornroe began to have experiences that drastically altered his life. Unpredictably, and without his willing it, Monroe found himself leaving his physical body to travel via a "second body" to locales far removed from the physical and spiritual realities of his life. He was inhabiting a place unbounded by life or death. Monroe recorded these experiences in two bestselling, landmark books, *Journeys Out of the Body* and *Far Journeys*. *Ultimate Journey*, his final and career-defining work, takes us further than we thought possible—and reveals to us what it all means. *Ultimate Journey* charts that area which lies "over the edge," beyond the limits of the physical world. It presents us with a map of the

"interstate"—the route that opens to us when we leave our physical lives, with their entry and exit ramps, their singposts and their hazards. It also tells us how Monroe found the route and travelled it, and uncovered the reason and the purpose of this pioneering expedition. It is a journey that reveals basic truths about the meaning and purpose of life—and of what lies beyond.

For good or ill, most, if not all, of the great institutions which have formed the framework of society have had their roots in the idea of Deity as a beneficent providential order of transcendental reality. In being handed down through countless generations the beliefs, concepts and customs have assumed a great variety of new outward forms in the process of transmission and development. To determine their true meaning and function as a cohesive force and as an expression of ultimate reality, the comparative and historical methods can be employed with considerable advantage. This book, first published in 1950, provides a valuable comparative study of religion.

*The Holistic Inspirations of Physics* SUNY Press

This book introduces the 3 kinds of investigations that can be made with a syncrometer. In the first kind of investigation, you can detect entities in your body, taken as a whole. For example, mercury aflatoxin, Streptococcus pneumonia, Epstein Barre virus, orthophosphotyrosine, benzene. Such a test is not as sensitive as the organ test, described next, but for this reason allows you to select those entities most abundant in the body and therefore of special significance; in the second, you can identify which organs contain a particular entity. For example, the mercury may be in the kidney, the Streptococcus in the joints, and so on. This allows you to embark on a cleanup program for your body in a focused way. The syncrometer lets you monitor your progress. And finally, you can detect entities in products. For example, lead in your household water, thulium in your reverse osmosis water, asbestos in your sugar.
