This high-quality atlas illustrates a didactic, technical approach in finding the different anatomical structures (bones, ligaments, tendons, muscles and nerves) in the lower extremities. The photos are unique in their presentation of the structures. Palpation is used as a diagnostic tool in clinical examination, and these photos are an important tool for the student and clinician. Line drawings indicating appropriate anatomy introduce each section, and serve as another learning tool. The atlas can be used as a textbook in gross anatomy courses and as a reference for beginning practitioners. It will be of interest to students and practitioners in physical therapy, occupational therapy, podiatry, as well as osteopaths and medical, nursing and physician assistants.

Il primo capitolo del libro tratta dei principi e della metodologia di valutazione. Questa indicazione di principi e metodi offre le nozioni necessarie per i capitoli successivi. I capitoli dal secondo all'ottavo trattano delle specifiche modalità di valutazione dell'articolari e della forza relativamente a capo, collo, tronco e arti. Questi capitoli, ognuno dei quali è dedicato a uno specifico complesso articolare, sono organizzati secondo un identico schema comune: anatomia di superficie; procedura di valutazione; valutazione e misurazione dell'escursione articolare; valutazione della forza muscolare, applicazioni funzionali.

The first comprehensive, fully-illustrated approach to the voice that explains the anatomy and mechanics in detailed yet down-to-earth terms, for voice users and professionals of all kinds. This book is the first to explain, in clear and concise language, the anatomy and mechanics of the mysterious and complex bodily system we call the voice. Beautifully illustrated with more than 100 detailed images, *Anatomy of the Voice* guides voice teachers and students, vocal coaches, professional singers and actors, and anyone interested in the voice through the complex landscape of breathing, larynx, throat, face, and jaw. Theodore Dimon, an internationally recognized authority on the subject, as well as an expert in the

Alexander Technique, makes unfamiliar terrain accessible and digestible by describing each vocal system in short, manageable sections and explaining complex terminology. The topics he covers include ribs, diaphragm, and muscles of breathing; the intrinsic musculature of the larynx, its structure and action; the suspensory muscles of the throat; the face and jaw; the tongue and palate; and the evolution and function of the larynx.

The book's small, portable size makes it ideal for reference in any practice setting. Presents information in an accessible, at-a-glance format. The unique red flag hierarchy assists with clinical reasoning. Index of Suspicion highlights the most likely conditions indicated by specific red flags. Discussion of 3D thinking encourages clinicians to look beyond immediate symptoms to find the underlying cause of a problem. Discussion of red herrings describes how to approach indicators that may mislead a diagnosis. Information on the concept of conditional probabilities helps practitioners make informed clinical decisions.
