The Enterprise for ASEAN Initiative (EAI), as envisaged in 2002 by the Bush administration, is set to be a landmark in U.S.-ASEAN trade relations. This study provides a detailed background and a map to the unfolding

negotiations. It includes: a detailed review of the U.S.-ASEAN economic relationship, beginning with coverage of the U.S.-ASEAN trade in goods globally and ending with an in-depth analysis of the changing structure of bilateral trade in services; reviews of theories of FTAs and empirical testing of the economics of the EAI itself. Using the USSFTA as a reference point, this study identifies and highlights the special bilateral issues that will likely be involved in the ongoing EAI FTA

negotiations. The EAI is considered in the context of a changing global, Asia-Pacific and sub-regional environment. Finally, the book makes a case for the EAI, focusing on policy motivations - that is, as a defensive strategy for ASEAN and a proactive commercial policy approach for the United States - as well as a strategic imperative for both. The Economics of the Enterprise for ASEAN Initiative is intended to inform governmental, and nongovernmental policy-makers, trade analysts,

economists, and researchers who need to have a comprehensive guide to this major trade initiative.

Modern mainstream economics is attracting an increasing number of critics of its high degree of abstraction and lack of relevance to economic reality. Economists are calling for a better reflection of the reality of imperfect information, the role of banks and credit markets, the mechanisms

of economic growth, the role of institutions and the possibility that markets may not clear. While it is one thing to find flaws in current mainstream economics, it is another to offer an alternative paradigm which, can explain as much as the old, but can also account for the many 'anomalies'. That is what this book attempts. Since one of the biggest empirical challenges to the 'old' paradigm has been raised by the second largest economy in the world - Japan - this book puts the

proposed 'new paradigm' to the severe test of the Japanese macroeconomic reality.

This book provides the first in-depth analysis of

the topic, offering an international comparison of credit reporting systems. Coverage includes competition in information markets, the microeconomics of information and privacy, and economic incentives to disclose or to conceal information. The book examines the history of credit reporting agencies and the regulation of privacy and credit reporting around the world. Finally, it surveys the effects of credit reporting in credit markets worldwide.

The New Comparative Economics Edward Elgar Publishing
 This book includes a set of papers from distinguished scholars who critically examine economic issues relating to the relationship between water and agriculture, with a special focus on irrigation. Employing state of the art methodologies, they address the most relevant issues in water policy. The volume offers a wide spectrum of innovative approaches and original and relevant cases with a focus on irrigated

European agriculture. The topics analyzed include qualitative and quantitative issues, water markets, demand analysis, economic analysis, implementation of economic issues. The Sapir Report John Wiley & Sons
 Economics is often accused of being "a-ethical" - lacking a moral perspective - if not altogether immoral. Its detractors criticize economic models of pure and perfect competition, and claim that economics should be concerned with

social effects and strive to be equitable. Yet, these critics fail to understand that the discipline has many dimensions. Economics has also developed a group of concerns directly related to ethics. The presence of practical ethics is evident in the economic analysis of behaviour that incorporates ethical preference, altruism, and a responsible calculation based on norms. It is fair today that economics differentiates ethics from purely financial matters, and the discipline can be

associated with morality in man's daily life. Volume 14 of the distinguished "Praxiology" series, examine the concept of positive ethics in economics. While normative ethics moralizes economics, trying to render it more "just," positive ethics is first and foremost a model for the construction of theoretical economic reasoning: it reflects on ethical practices within economics, and introduces a model of reasoning that takes individual ethical

behaviour and its after-effects into account. The book is divided into three parts. In "Altruism," the contributors discuss the notion of unselfish concern for the welfare of others, and its place in economic practice. In "Commitment," the authors discuss reason as being central to economic theory, as well as the position of ethical behaviour. In "Responsibility," the idea that man is not an island unto himself, but a being involved in a set of relationships, is

examined. If a person is simultaneously responsible for himself and others, then how far does his responsibility extend? "Essays on Positive Ethics in Economics" is thought-provoking volume that will be of interest to economists, policymakers, philosophers, and students of ethics and morality. *Disinflation, Fiscal Sustainability, and Labor Market Adjustment in Turkey* Ashgate Publishing, Ltd. A Modern Guide to Rethinking Economics World Bank Publications
Agent-based Computational Economics (ACE) is a new discipline of economics, largely grounded on concepts like evolution, auto-organisation and emergence: it intensively uses computer simulations as well as artificial intelligence, mostly based on multi-agents systems. The purpose of this book is to give an up-to date view of the scientific production in the fields of Agent-based

Computational Economics (mainly in Market Finance and Game Theory). Based on communications given at AE'2005 (Lille, USTL, France), this book offers a wide panorama of recent advances in ACE (both theoretical and methodological) that will interest academics as well as practitioners.

Building a Baltic Miracle? World Bank Publications

Abstract: In recent years, comparative economics experienced a revival, with a new focus on comparing capitalist

economies. The theme of the new research is that institutions exert a profound influence on economic development. The authors argue that, to understand capitalist institutions, one needs to understand the basic tradeoff between the costs of disorder and those of dictatorship. They then apply this logic to study the structure of efficient institutions, the consequences of colonial transplantation, and the politics of institutional choice. This paper is a product of the Private

Sector Advisory Department, Private Sector Development Vice Presidency" is part of a larger effort to understand institutional differences in the regulation of business.

Energy, Economics, and Politics in the Caspian Region NRC Research Press

This book focuses on knowledge-based

economies and attempts to analyze dynamic innovation driven processes within those economies. It shows that evolutionary economics, and in particular the strand of applied industry and innovation studies often called Neo-Schumpeterian economics, has left the nursery of new academic approaches and is able to offer important insights for the understanding of socio-economic processes of change and development having a strong impact on

economic reality all over the world. The contributions are summarized under four major sections knowledge and cognition, studies of knowledge-based industries, the geographical dimension of knowledge-based economies and measuring and modelling for knowledge-based economies and give a broad overview of the prolific research being undertaken in applied evolutionary economics. Students will find this book an invaluable

resource for future research, as will researchers seeking an introduction to new methods and perspectives of analysis.

The Microeconomic Basis

Routledge
Volume 3 of this series of the Handbooks in Economics follows on from the previous two

volumes by focusing on the fundamental concepts of agricultural economics. The first part of the volume examines the developments in human resources and technology mastery. The second part follows on by considering the processes and impact of invention and innovation in this field. The effects of market forces are examined in the third part, and the volume concludes by analysing the economics of our changing natural resources, including the past effects of climate

change. Overall this volume forms a comprehensive and accessible survey of the field of agricultural economics and is recommended reading for anyone with an interest, either academic or professional, in this area.

Financial Crises in Emerging Markets OUP
 Oxford

The Role of Education in Enabling the Sustainable Development Agenda explores the relationship between education and other key sectors of development in the context of the new global Sustainable Development Goals (SDG) agenda. While it is widely understood that there is a positive relationship between education and other dimensions of development, and populations around the world show a clear desire for more and better education, education

remains an under-financed and under-prioritised sector within development. When education does make it onto the agenda, investment is usually diverted towards increasing access to formal schooling, without focusing on the intrinsic value of education as a tool for development within the international development community more broadly. The authors explore these tensions through a review of literature from a range of disciplines, providing a

clearer picture of the relationship between education and other development sectors. The book challenges silo-thinking in the SDGs by exploring how achieving the SDG education targets can be expected to support or hinder progress towards other targets, and vice-versa. Drawing on examples from both low and high income countries, the book demonstrates how 'good' education functions as an 'enabling right', impacting positively on many other areas. The

book's scope ranges across education and development studies, economics, geography, sociology and environmental studies, and will be of interest to any researchers and students with an interest in education and the SDGs.

Real World Economics

Edward Elgar Publishing
Since the 2007 financial crisis, discussion on issues related to the size, spread and frequency of financial crises has captivated a wide variety of audiences. Why has the world

economy experienced such a marked increase in financial transactions and private and public indebtedness since the 1980s? How have middle-income developing countries suddenly become a part of this dynamic? And, most importantly, how has the topic of financial crises been featured in households' daily discussions in both developed and developing parts of the world? Domna Michailidou addresses the questions above through exploring the inexorable

evolution of financialisation into financial crisis through the examination of three middle-income countries: Mexico, Brazil and South

Korea. Concentrating on emerging economies, and especially choosing three very different economies that all experienced financial crises in the 1990s, this book explores

what lessons can be learnt regarding financial fragility, volatility and failure in the wake of capital market liberalisation.
